

Annexure No.	27 D
SCAA Dated	29.02.2008

BHARATHIAR UNIVERSITY: COIMBATORE – 641 046
M.Sc., ANIMAL BIOTECHNOLOGY (CBCS Pattern) with Compulsory Diploma in
Animal Biodiversity and Conservation

(FOR THE STUDENTS ADMITTED DURING THE ACADEMIC YEAR 2007-2008
BATCH AND ONWARDS)

Admission of Candidates

Eligibility Condition:

B.Sc. Zoology
B.Sc. Advanced Zoology
B.Sc. Applied Zoology
B.Sc. Life Sciences
B.Sc. Animal Science and Biotechnology
B.Sc. Advanced Zoology and Biotechnology
B.Sc. Biotechnology
B.Sc. Biochemistry
B.Sc. Microbiology
B.Sc. Genetics
B.Sc. Bioinformatics
B.Sc. Environmental Sciences
B.Sc. Environmental Zoology
B.V.Sc.

Scheme of Examination

Sem	Paper Core/ Elective/ Supportive	Sub. Code	Subject	Instructional Hrs / Week (L)	Instructional Hrs / Week (P)	University Examinations						
		07ZO0B				Internal		External	Total	Credits		
						Theory	Practical	Theory		Theory	Practical	Total
I	Core -I	13A	Biochemistry and Biophysics	3	1	15	25	60	100	3	1	4
	Core – II	13B	Molecular Cell Biology	3	1	15	25	60	100	3	1	4
	Core – III	13C	Microbiology	3	1	15	25	60	100	3	1	4
	Elective - I	1EA	An Introduction to Human Cytogenetics	4	--	40	-	60	100	4	-	4
	Supportive-I	1GS01	Entomo - biotechnology	2	--	20	-	30	50	2	-	2
	Diploma I	1LA	Evolution and Biogeography	4	--	40	-	60	100	4	-	4
II	Core – IV	23A	Proteomics	3	1	15	25	60	100	3	1	4
	Core – V	23B	Receptor Biology	3	1	15	25	60	100	3	1	4
	Core – VI	23C	Stem Cell Technology	3	1	15	25	60	100	3	1	4

		Total						2200	88			

L-Lecture hours per week, P-Practical hours per week.

13A

Core: I - Biochemistry and Biophysics

The objective of the course is to provide a concise and unifying approach to physical chemistry, biochemistry and biophysics. It also provides the structure, function and interactions of bio molecules, how biological processes occur at the molecular level and to understand these processes with strong backgrounds in chemistry, biology, and physics.

Unit – I

Structure of atom, molecules, ionic bonds, covalent bonds, hydrogen bond, Vander Vaal's forces, Intermolecular forces, electrolytes, pH and buffer capacity in the cell environment.

Unit – II

Amino acids: Structure, classification, properties, isoelectric point and zwitter ions. **Proteins:** Classification based on chemical structure, function and solubility; properties, primary, secondary and tertiary, Helix, principles of isolation and purification, Synthesis of polypeptides. **Enzymes:** Classification, Kinetics, Co-factors, Enzyme inhibition, Enzyme substrate compounds.

Unit – III

Nucleic acids: DNA structure and properties, DNA as a genetic material, DNA synthesis – mechanism of replication (semi conservative and reverse transcription), nucleotides. **Different types of RNA:** mRNA and rRNA.

Lipids: Classification, properties – saturated and unsaturated fatty acids – plant waxes, steroids, cholesterol and lecithin.

Carbohydrates: Classification, structure and properties of functional groups.

Unit – IV

Bioenergetics: Laws of thermodynamics, concept of free energy, oxidation reduction (redox) reactions. Energy coupling reactions, energy rich compounds, ATP cycle, standard free energy, membrane potentials, and negative entropy changes in living systems, enzyme catalysis.

Unit – V

Analytical techniques: Principle and application of Chromatography (Paper, thin-layer, column and GLC), Centrifugation (RPM and G, Ultra centrifugation), Spectroscopic techniques (UV, visible spectroscopy, X-ray crystallography, NMR, IR, fluorescence & atomic absorption), Isotopes and their importance (GM counters & Scintillation counting).

Practical:

1. pH: Structure and operation of pH meter
2. To measure the pH of human blood.
3. Preparation of buffers: Phosphate buffer and citrate buffer.
4. Chromatographic techniques:
 - a. Paper chromatographic techniques to separate amino acids.
 - b. Thin layer chromatographic technique to separate lipids.
 - c. Column chromatographic techniques to separate urinary pigments.
5. Colorimetric/Spectrophotometric estimation of the following biomolecules.
 - a. Total free amino acids (Ninhydrin reagent method)
 - b. Protein (Biuret and Lowry *et al.*, 1951 method)

- c. Total soluble carbohydrates (Anthrone reagent method)
- d. Total cholesterol (Zlatkis *et. al.* method)
6. Electrophoresis (PAGE) – Demonstration.

13B

Core: II – Molecular Cell Biology

Unit – I

Cell organization, Sub-cellular structures of prokaryotic and eukaryotic cells. Synthesis and sorting of plasma membrane. Chromatin structure and nucleosome concept, Organization and function of genetic material, Gene paradox, Repetitive DNA, Satellite DNA, Overlapping genes,

Split genes, Pseudogenes. Chromatin, nuclear and mitochondrial genome organization, Structures of DNA and RNA, Stereochemistry of bases and secondary structures. Genetic structure analyses of eukaryotic genomes.

Unit-II

Evidence of basic targets, Enzymes, Mechanisms of DNA replication in eukaryotes. t-RNA, m-RNA, r-RNA and hn-RNA structures and folding, Mechanisms in eukaryotes RNA splicing. Ribosomes, Genetic code, General control of DNA, RNA and protein synthesis, Post-translational modifications, Protein targeting.

Unit-III

Gene regulation in eukaryotes, Gene clustering, Mechanism of positive and negative control of gene expression. Translational and transcriptional control of regulatory mechanism of gene expression, Environmental effects on gene regulation.

Unit-IV

Signaling at the cell surface, Types of signaling pathways that control gene activity, Integration of signals and gene controls. Moving proteins into membranes and organelles, Vascular traffic, secretion and endocytosis, Metabolism and movement of lipids.

Unit-V

Regulation of the Eukaryotic cell cycle, Cell birth, Lineage and cell death. Cancer/ oncogenes, Cell markers, Cellular morphology, Primary and established cell lines, Kinetics of cell growth, Genetics of cultured cells. Stem cell culture, embryonic stem cells and their applications. Cell culture based vaccines. Somatic cell genetics.

Practical:

1. Principles of microscopy and optics*.
2. Cell size determination
3. Microtomy and photography*.
4. Mounting of polytene chromosomes.
5. Preparation of mitosis in Onion root tip.
6. Cell division in Grasshopper testis*.
7. Preparation of animal tissue culture medium using membrane filtration*.
8. Cell counting and cell viability using trypan blue dye exclusion assay
9. Polyacrylamide Gel Electrophoresis of protein from animals*.

* Practical by demonstration only.

13C

Core: III - Microbiology

Unit – I

Introduction to Microbiology – Scope of microbiology – History of microbiology – Classification of bacteria, fungi, yeast and virus. Structure and functions of bacteria and virus. Reproduction in bacteria – Transformation, conjugation, transduction. Mapping in bacterial genomes.

Unit – II

Cultivation and control of microorganism – Methods of collection of sample – methods of estimation of microorganism in soil, water and air – Isolation and identification of bacteria. Methods of sterilization and disinfection – Microbial control – Physical and chemical – techniques of pure culture – Method of cultivation of bacteria – Phases of growth – Influence of environment on bacteria – Nutritional requirements of heterotrophic bacteria.

Unit – III

Microbial Ecology: Distribution of microorganism in soil, water and air – Environmental factors influencing the distribution of microorganism – Role of microorganisms in the cycling of

nutrients – Carbon, nitrogen, phosphorous and sulphur cycle – Bacterial photosynthesis – Microbial interactions – synergism, symbiosis, commensalism and parasitism.

Unit – IV

Food Microbiology: Sources, types incidence of microorganism in vegetables, meats, poultry, seafood, milk and diary products – spoilage of food, fruits, vegetables, cereals, meat, poultry egg, seafood, caned products – Factors influencing spoilage – Methods of detection of spoilage, physical, chemical, bioassay – principles of food preservation and prevention of food spoilage – Food poisoning organism.

Unit – V

Microbial Technology: Genetic engineering of food and additives – Single Cell Protein (SCP) production – Production of organic acids (acetic acid), ethanol – Antibiotics – Microbial toxins – bacterial – Vitamins – methanogenesis – hydrogen oxidizing bacteria – Fermentation products – Degradation of protein, cellulose, pectin and chitin – Oil degrading bacteria.

Practical:

1. Preparation and requirements of microbiology laboratory.
2. Microscopy the operational uses of light microscope, preparation, use and care.
3. Preparation of Non-selective selective culture media.
4. Estimation of bacterial from soil and water using plate count or serial dilution.
5. Isolation of bacteria.
6. Observation of morphological characters of bacterial and protozoan temporary wet mount technique.
7. Staining methods: Preparation of smears for staining, simple staining, negative staining, gram staining.
8. Control of microorganism – physical methods (moist and dry heat) – mechanical removal methods (sterilization and filtration).

Unit-I

History of Human Chromosome Research - Denver Conference (1940) - Chicago Conference (1966) - Paris Conference (1971) - Nomenclature of Human Chromosome.

Unit-II

Identification of Human diploid chromosome - peripheral blood cultures - banding techniques - G-band; Q-band; C-band; R-band - Identification of 23 pairs of Human chromosomes by band position.

Unit-III

Chromosomal syndromes: Autosomal syndromes - Sex chromosomal syndromes - Structural chromosomal syndromes.

Unit-IV

a) **Prenatal diagnosis:** Chorionic villi sampling - Foetoscopy, Ultrascopy - Amniocentesis. b) **Postnatal diagnosis:** Peripheral blood leucocyte culture - Sister Chromatid Exchange - Fragile site - Mitotic index. c) **Genetic Counseling.**

Unit-V

Hereditary forms of Cancer - Oncogenes and Cancer - Chromosomes and Cancer - Cancer and the environment.

Reference Books:

1. Study guide for Cumming's human heredity principles and issues by Shontz, Nancy N. ; Cummings, Michael R. (3rd Edition), 2000. *Pacific Grove, CA : Brooks/Cole Thomson Learning*

3. Human Genetics by Elof Axel Carlson, 1984. *Tata McGraw-Hill pb.* New Delhi.

Unit – I

Critical examination and discussion of advances in the areas of insect biotechnology, including genetic engineering and genomics.

Unit – II

An in-depth analysis and role of insect as vectors of pathogens, or as parasites causing disease in humans (principally) and animals – mosquito transmitted diseases - The interaction of host and parasite and the dynamic nature of the epidemiological system

Unit – III

Biology of insect, viruses, bacteria, fungi, entomopathogenic nematodes and their use in insect pest/vector control.

Unit – IV

Genetic improvement of natural enemies, Insect cell line, Botanical insecticides and Neuro-endocrinology - bioactive peptides.

Unit – V

Transgenic plants- role in insect control, Genetic control - Sterile (transgenic) Insect Technology (SIT).

1LA

Paper: I– Evolution and Biogeography

Unit – I:

Geological time scales, fossils and fossilization, fossil histories of Invertebrates and Vertebrates, origin of protozoa, metazoa, bilateria, metamerism, symmetry, skeleton and coelom.

Unit – II:

Origin of life; theories of evolution; Neo-Lamarckism; Neo-Darwinism, micro, macro and mega evolution; morphological, taxonomical rates of evolution.

Unit – III:

Zoogeographical animal distribution, barriers, significance of island fauna, isolation and isolating mechanisms – race formation; selection natural, artificial and sexual.

Unit – IV:

Trends in Evolution channelisation of selection – mechanism of evolution. Adaptations and Co-adaptations; adaptive radiations and non-adaptive characters in biology.

Unit – V:

Genetic variations - classification and origin; genetic drift mutation; Genetic assimilation and homeostasis; non-genetic variation – age, seasonal, cast density, dependent, ecological polymorphism, mimicry and animal colorations.

23A

Core: IV – Proteomics

Unit –I

Introduction to proteomics. Study of multiprotein systems. Proteome. Life and death of a protein. Proteins as modular structures. Functional protein families. Deducing proteome from the genome. Analytical proteomics. Significance for analytical proteomics. Peptide separations. Protein extracting from biological samples. Protein digestion techniques. Proteases, Cyanogen bromide and In-gel digestion.

Unit –II

One dimensional SDS-PAGE. Two dimensional SDS-PAGE. Problems with 2D- SDS-PAGE. Ionization techniques for macromolecules. Preparative IEF. High-performance liquid chromatography. Capillary electrophoresis.

Unit –III

Mass spectrometer analysis of proteins and peptides. MALDI-TOF MS instrument. MALDI. TOF Mass analyzer. ESI Tandem MS instruments. Tandem Mass analyzers. Triple Quadrupole Mass Analyzer. Ion-Trap Mass Analyzer. Q-TOF and Fourier Transform-Ion Cyclotron Resonance MS instruments.

Unit –IV

Protein identification by peptide Mass fingerprinting. Peptide sequence analysis and identification by Tandem Mass spectrometry. Mining proteomics. SALSA. Protein expression profiling. Identification of protein-protein interactions and protein complexes. Mapping protein modifications.

Unit –V

Protein chips. SELDI. Microsequencing. Proteomics in cancer research. Proteomic analysis in pancreatic ductal adenocarcinoma and human breast carcinoma. Profiling of chemoresistant cancer cells. Proteomics in disease understanding.

Practicals:

1. Protein extraction and digestion from biological samples.
2. Liquid chromatography.
3. SDS-PAGE and silver staining of gels.
4. Blotting procedures.
5. 2D SDS-PAGE
6. Spot matching in 2D gels using software.
7. Protein analysis by HPLC.
8. Protein modification and analysis.

23B

Core: IV – Receptor Biology

Receptors are nature's transducers—they detect circulating hormones or substances released by nerve activity and elicit a biological response. Receptors serve fundamental roles in recognition and communication; they pervade endocrinology, enzymology and sensory physiology. Thus they provide the basic mechanism by which living things gain information about their environment and integrate the functioning of their own systems.

Unit –I

Introduction to receptor – Regulation of receptors - application of receptors in biology- Examples of receptors, Autocrine, Paracrine and Endocrine models - Action- Characterization of receptors.

Unit –II

Signal transduction mechanisms for plasma – membrane receptors- Introduction – classification – Adenylyl cyclase and cyclic AMP- Guanylyl cyclase and cyclic GMP- Ion channels controlled by G proteins - Calcium as a second messenger.

Unit -III

Receptors for Immunoglobulin- Introduction - Receptors for Immunoglobulin IgE - Nature of the IgE receptor – Function of the IgE receptor.

Unit –IV

Hormone receptors – Introduction – Mechanism of hormone action -Thyroid hormone receptors- Events elicited by hormone – receptor binding.

Unit -V

Vertebrate visual photoreceptors - Rhodopsin – Photo transduction - Nicotinic acetylcholine receptor - Structure and function - Receptor phosphorylation - Steroid receptors and membrane receptors.

PRACTICAL:

1. Mouse Leptin Receptor assay by ELISA
2. Progesterone receptor assay
3. Estrogen receptor assay

Books Recommended

1. Fundamentals of Receptor Molecular Biology By Donald Francis Hoelzl Wallach.

6. Molecular Biology of Receptors: Techniques and Applications of Receptor Research by A.D. Strosberg
7. The Receptors by P. Michael Conn, Volume 1 Academic press, Inc.,
8. Molecular Cell Biology by Darnell J., Lodish H., Baltimore D., Freeman W.H., 1990.
9. Cell Biology by Kimball T.W., Wesley Publishers, 1989.

23C

Core: V1 – Stem Cell Technology

Unit-I

Stem cell concept – Properties of stem cell – Types of stem cell embryonic stem cell – Adult stem cells – Problem of differentiation.

Unit-II

Differentiation status of cells – Primordial germ cell -Skin cell - Gastrointestinal cells – Embryonic stem cell differentiation as a model to study haematopoetic and endothelial cell development.

Unit-III

Stem cell location and Classification – Neural stem cells – Stem cell niches – Germ line Epithelial and Epidermal and neural niches.

Unit-IV

Uses of Stem cells - Human stem cells – Renewal of stem cells- Stem cells and Tissue engineering –Embryonic stem cells and Gene therapy - Therapeutic cloning.

Unit-V

Single-Cell PCR methods for studying stem cells – Ethical and Social consideration of Stem cell research

PRACTICALS

1. Preparation and requirements of Stem cell Technology laboratory.
2. Culture of stem cell – Differentiation experiments.
3. Techniques on protein – Nucleic acid interaction : Gel retardation assay, DNAase footprinting modification production ,Modification interference – Demonstration
4. Single cell PCR methods for studying Stem cells –Demonstration

REFERENCE BOOKS

6. **Stem cells**, scientific progress and Future Research Direction by National Institutes of Health, (2000).

Unit-I

Introduction to the eukaryotic invertebrate genome: From genes to genomes: the emergence of genome studies – Historical background and medical importance of *Aedes aegypti* and *Anopheles gambiae* - **Gene structure and expression** – Pol II genes: proteins and small nuclear RNA – Pol I genes: ribosomal RNA – Pol III genes: 5S RNA, tRNA and small cytoplasmic RNA – Pseudogenes and processed genes.

Genome organization of Insects: Cytogenetic organization – Genome size and other physical properties – chromosomal organization – sex – chromosome evolution. **Genetic elements and sequence level organization:** Genes and other low copy sequences – Moderate to highly repetitive sequences - Highly repetitive elements.

Unit-II

Genetic mapping: Morphological and resistance markers – Biochemical markers – Polymorphic DNA markers – Linkage disequilibrium – Quantitative trait loci (QTL) mapping – The *Aedes aegypti* and *Aedes gambiae* linkage map.

Physical mapping: Low resolution mapping – High resolution mapping – The *Aedes aegypti* and *Aedes gambiae* physical map – Transformation systems in mapping – Correlation of genetic and physical maps.

Molecular systematic, evolution and genetics of insect populations: **Insect molecular systematic and evolution:** Taxonomy/Systematic – evolution – application in integrated pest management (IPM). **Molecular genetics:** Molecular tools for examining populations structure – Case studies – Present and future applications.

Unit-III

Improving virulence of biological control agents of pest insects: Host- specificity and alternative host ranges – Strain selection – Genetic engineering of biological control agents – Applications in IPM. **Transfection of plants with insecticidal genes for control of crop pest insects:** Vectors – Applications for plant improvement – Applications in IPM. **Molecular mechanisms for pesticide resistance:** Review of literature – Molecular mechanisms – Applications in IPM. **Sex determinations in insects:** Molecular basis for sex in *Drosophila melanogaster*. General model for sex determinations in insects. Meiotic drive, cytoplasmic distorters and hybrid sterility.

Unit-IV

Insect vector competence of pathogens: Biology – Pathogen genetics – Vector genetics. **Developmental biology and gene manipulation in *Drosophila* and other insects:** A guide to *Drosophila* development – Dissecting development with mutants – other insects.

Unit-V

Molecular genetics of insect behaviour: Insect central nervous system – Analysis of behaviour by traditional methods and molecular methods – Mapping genes of complex Behaviour. **Transgenic insects:** Transformation methodologies – Transformation targets.

6. Insect molecular biology by Inada, M., Field and David, A.O. Brochta.

2GS

Supportive: II - Crustacean Aquaculture and Technology

Learning objectives:

- To develop skills and acquire knowledge to be able to understand different aquaculture systems consisting of common and high demanded crustacean species and their culturing techniques, the relationship between successful aquaculture and environmental stewardship.
- To provide an opportunity for underpinning of sustainability (the environment, culture ability and economic viability of culture operations).
- Specifically, this paper will help to learn how aquaculture supports production of representative species on socio-economic perspectives, conservation, and for various other purposes.
- To learn about the interrelationship between culture operations and the natural environment, specifics on culture of selected species.

Unit-I

Importance of fisheries and aquaculture - Current issues regarding sustainability of aquaculture - Ecological and social aspects of aquaculture development - Nutritional value of crustaceans as food.

Unit-II

Taxonomy of crustaceans – Live feeds (Algae and algal culture, Micro-invertebrate culture (Rotifers, *Artemia*, Copepod etc.) - Artificial feeds - Aquaculture and Techniques (semi-intensive, intensive, hyper-intensive).

Unit-III

Brooding (selective breeding, “specific pathogen free”) - The hatchery technology and prawn seed production.

Unit-IV

Culture and Grow-out technology for commercially important crustaceans: freshwater prawns, marine shrimps, freshwater crayfish, lobsters, and crabs.

Unit-V

Nutritional requirement and feeding strategies - Water quality management and maintenance of sanitation - Pathology and quarantine - Post-harvest handling and marketing.

2LA

Paper: II - Wildlife Biology and Conservation

Unit – I

Biogeography of India and patterns and distribution of ecosystems, ecological succession, biotic and abiotic factors of an ecosystem with special reference to tropical rain forests. Taxonomy of common Indian wild animals of reptilia, aves and mammalia. Geography of India and the pattern of distribution of fauna and flora.

Unit – II

Natural history of wild life; population patterns, habits, habitats, habitat selection, resting behaviour; nutritional and reproductive strategies of common wild animals such as the calotes, poisonous and non-poisonous land and water snakes; crocodiles, birds of prey and other insectivorous, frugivorous, nectivorous and seed feeding birds, wild mammals of the Indian region.

Unit – III

Social behaviour such as aggregation, sexual behaviour, migration and territorial behaviour in birds and mammals; means of dispersal and barriers of dispersal, group size and spacing carrying capacity.

Unit – IV

Wildlife conservation: Extermination and extinction, endangered species; effects of environmental degradation on wildlife and its conservation; administrative regulations, laws and their applications in Zoological parks, wild life sanctuaries and Biosphere reserves.

Unit – V

Wild life management; Tropic structure of wildlife, common diseases of wildlife; Wild life sanitation, management of wildlife, Zoo planning and management and tourism development in wild life sanctuaries.

33A

Core: VII- Nanobiotechnology

Unit- I

Introduction to Nanobiotechnology - Biomaterials - Biocompatible devices - Implant coating – stents and seeds –Structure and process of biomolecules for functional materials- Bioelectronics in Medical applications.

Unit- II

Introduction to protein based Nano structure- Protein patterning and application in bio materials and Bio devices DNA based Nano structures - fabrication properties and application.

Unit- III

Nanoanalysis - Nano particle molecular labels - Polymers nanofibres and their applications in bioengineering – Functional polymers for bone tissue engineering applications-Applications of nanotechnology in tissue engineering

Unit- IV

Microfluidics - Devices and their importance for Nanobiotechnology- Advantages of Microfluidics Devices – Concepts for Microfluidics Devices - Materials for Microfluidics components – Fluidic Structures.

Unit- V

Bio medical applications - Bio active Nano material in bone crafting and tissue engineering – Inorganic / polymers Nanocomposites for dental restoration and bone replacement application- Biosensors – Drug delivery –Neuro electronic interfaces – Protein engineering – Nanoluminescent tags.

PRACTICALS

1. Protein Micro array –Demonstration
2. Quantum dots-Demonstration
3. DNA micro array- Demonstration.
4. Materials for the manufacture of Microfluidics components-silicon-glass- polymers-Fluidic structure and fabrication methods –Demonstration.

33B

Core: VIII- Immunotechnology

Unit - I

Introduction to Immune system; cellular and humoral immunity; complement; molecular basis of immune diversity. Host –parasite interaction; Immunity and infection: Immunity to bacteria, virus, protozoa, fungi and tumor.

Unit - II

Antigens and antigenicity. Polyclonal and monoclonal antibody production and purification. Conjugation of antibody with enzymes, fluorochrome and toxin. Humoral immune response and cell mediated immune response.

Unit - III

Immunity to infections. Immunological techniques: RIA, ELISA, immunocytochemistry, Immunofluorescence and Immunoblotting.

Unit - IV

Fluorescence antibody techniques, flow cytometry, fluorescence in situ hybridization. Immunopathology and immunological disorders.

Unit - V:

Principles and methods of vaccine preparation – Edible vaccines. Antibody engineering and structure. Cytokines and immunotherapy.

PRACTICAL:

1. Media preparation and animal cell culture.
2. Primary cell culture establishment from tissue.
3. Antibody development and purification.
4. ELISA
5. Western Blot.
6. Immunofluorescence.
7. RIA
8. Mounting of Spleen and Bone Marrow Cells
9. Lymphoid organs in Rat.
10. Differential counting of human WBC
11. Demonstration of Antigen – Antibody by interfacial ring test / blood grouping culture.

33C

Core: IX- Genetic Engineering

Unit-I

Outline process of genetic engineering and recombinant DNA technology, Isolation of genes, Concept of restriction and modification - Restriction endonucleases, DNA modifying enzymes, Ligases. Host-vector system - Cloning vectors for *E. coli.*, Cloning vectors for Eukaryotes.

Different Kinds of Vectors - Plasmids, Phage vectors, Cosmids, Phagemids, Virus vectors, Shuttle vectors and expression vectors.

Unit-II

Isolation and purification of DNA from animal cells, DNA sequencing and sequence analysis, Synthesis of gene, DNA finger printing, Different strategies of cloning, Direct and vector mediated gene transfer, Ligation strategies, Genomic libraries, cDNA libraries, Gene tagging, Expression of cloned genes, Isolation and purification of the expressed product. Site-directed mutagenesis. PCR technology, its principles and application. Molecular marker technology, Promoters and Operon systems. DNA forensics, DNA finger printing and paternity decisions.

Unit-III

Micro manipulation and cloning, Somatic cell cloning, Identification and isolation of genes of economic importance, Gene mapping, Transgenesis for animal improvement and production of animals as bioreactors for proteins of pharmaceuticals value, Gene transfer in fish, Expression of animal genes in bacteria, Biohazards and safeguards of genetic engineering.

Unit-IV

Conventional methods of animal improvement, predominantly selective breeding and cross-breeding. Embryo biotechniques for augmentation of reproductive efficiency and faster multiplication of superior germ plasm. Super ovulation. Oestrus synchronization. Embryo collection, evaluation and transfer. *In vitro* maturation of oocytes. *In vitro* fertilization and embryo culture. Embryo preservation, Embryo sexing.

Unit-V

Genetic diversity, Molecular taxonomy, Species and population biodiversity, Biodiversity and centers of origins of animals, Conservation of animal genetic resources, Morphological and molecular characterization of biodiversity. Bio-safety in relation to transgenic research and applications.

Practical:

1. Preparation of plasmid DNA and genomic DNA from *E.coli*.
2. Preparation of genomic DNA from animals/ human.
3. Agarose gel electrophoresis of plasmid and genomic DNA.
4. Restriction mapping of plasmid DNA.
5. PCR amplification, RFLP*.
6. Vector preparations*.
7. Insert preparations*.
8. Ligation*.
9. Transformation of *E. coli* with plasmid DNA using CaCl_2 *.
10. Isolation of the recombinant plasmid*.
11. Preparation of cDNA using RT-PCR*.

* Practical by demonstration only.

3EA

Elective: III – Ecobiotechnology

This course provides the application of biotechnology to solve environmental problems like pesticides, metals, industrial effluents, solid waste, acid rain, global warming, ground water contamination etc., by environmental quality evaluation, monitoring, and remediation of contaminated environments. This course also provides detailed knowledge of environmental biology and pollution.

Unit – 1

Introduction: Ecology and Ecosystem, Environmental bcotechnology, Scope and importance, Current status, Future. **Environmental pollution:** Origin, Types, Air, Water, Soil, Noise and Thermal, their sources and effects.

Unit – 11

Sewage and waste water treatment: Introduction, Aerobic and anaerobic treatment, Conventional and advanced treatment technology, Use of microorganisms, Bioreactors, Use of immobilized enzymes.

Unit – III

Solid waste management: Introduction, Impact on global climate change, E-waste, Landfills, Composting, Earthworm treatment.

Unit – IV

Hazardous waste management: Introduction, Xenobiotics compounds, Hazardous waste, Biodegradation of xenobiotics compounds, Organisms involved in degradation of xenobiotics.

Unit – V

Novel methods for pollution control: Introduction, Vermitechnology, Application of environmental genetics and Aiming for biodegradable and eco-friendly products.

Text Books:

1. Fundamentals of Ecology by Eugene P. Odum, 1972, *W.B. Saunders Company*, London
2. Environmental Pollution by Hodges, L., 1977. *Holt, Reinhart Publishers*, USA.
Environmental Pollution and Control by Jeffrey Peirce, J., Aarne Vesilind, P. and Ruth Weiner, 1997, *Elsevier*, The Netherlands.
3. APHA Standard Methods for the Examination of Water and Waste Water, 14th Edition, 1985. American Public Health Association., Washington, USA.
4. Environmental Biotechnology by C. F. Forster and D. A. J. Wase, 1987. *Ellis Horwood Limited*, England
5. Environmental Microbiology by W.D. Grant and P.E. Long, 1985. *Blakie Glasgow*, London.
6. Industrial Microbiology by Casida, 1994, *Wiley Eastern Publishers*.
7. Microbial Gene Technology by H. Polasa, 1991. *South Asian Publishers*, New Delhi.

3GS

Supportive: III – Marine Biotechnology

Unit-I

Basics of Aquaculture: Introduction to Biotechnology scope and its utility in Aquaculture - Indian and World Aquaculture-Role, Status and Importance of Aquaculture, Marine ornamental fishes of India.

Unit –II

Molecular Aspects of Growth and Reproduction in Aquatic Organisms: Gene sequence analysis and functions of Moulting Inhibiting Hormone –Vitellogenesis Inhibiting Hormone - Mandibular Organ Inhibiting Hormone – Gonadotrophic Hormone I & II – Induced spawning – Ovaprim – Applications. GH Transgenic Fish - Embryonic Stem Cell Technology –Morpholino based gene knock down technology – Homologous Recombination and chimera formation – Nuclear Transfer Technology- Fish genetics and Bioinformatics

Unit-III

Marine Biodiversity: Marine Biodiversity - Defining and Measuring diversity, molecular methodologies - Maintenance of biodiversity and Conservation -Application-Marine food web dynamics - Primary, secondary and tertiary Production.

Unit – IV

Principles of Oceanography: Living resources of Indian sea - Application of ocean remote sensing, salinity and density-Horizontal, Vertical and temporal variations - Winds and general

oceanic circulation - Marine food analysis - Spillage, quality control, ISO standard keeping export in consideration –Biodegradation.

Unit-V

Marine Biotechnology and its Potential: Probiotics bacteria and their importance in aquaculture – PCR and other techniques for identification of bacterial and viral pathogen in aquaculture- Vaccines for aquaculture – Marine virology - Cryopreservation technique- application of cryopreservation in aquaculture - Applied genetics of cultivated fishes – Commercial enzymes from marine microorganism – Marine organism as a source of polysaccharides - Marine food.

Paper: III - Animal Biodiversity

UNIT I - BIODIVERSITY; SPECIES CONCEPTS; ANIMAL DIVERSITY

What is Biodiversity? - Components of Biodiversity (Ecosystem, Genetic and Species diversity) - Assigning values to biodiversity - Species concepts - **Animal diversity:** (Distribution, inventory, species richness) - Biodiversity Hotspots (Western Ghats, Indo-Burma region).

UNIT II - LOSS OF ANIMAL DIVERSITY, STATUS OF SPECIES

Extinctions: Past rates of Extinctions - Concepts of Island biogeography and extinction rates on Islands - Human induced, Modern and local extinctions - Population reduction-threats to wildlife (examples)- Habitat loss, degradation and fragmentation. Threats to animal diversity in India - **Status of species:** Rare, endemic and threatened species - Measuring status of species in the wild - IUCN Red list (Assessments and methodologies) - Status of Indian animals.

UNIT III - CONSERVATION: TOOLS IN ANIMAL CONSERVATION

What is conservation biology? - *In situ* and *Ex situ* conservation of Indian animals (Case studies) - Population management -Project Tiger and Elephant - Captive breeding programme - peoples participation in conservation - Successes and failures of conservation actions in India (Case study) -**Tools in Conservation:** Interpretation of various data on wildlife - GIS - remote sensing - Landscape model – PVA and CAMP processes.

UNIT IV - ANIMAL LAWS AND POLICIES IN INDIA; ECONOMICS OF BIODIVERSITY CONSERVATION

Wildlife (Protection) Act of India (1972) - Protected Area network - forest policy - Prevention of cruelty to Animal Act - Convention on Biological diversity, International Trade in endangered species - Zoo policy- Laws and their applications in Zoological parks, wildlife sanctuaries and biosphere reserves - Economics of biodiversity conservation.

UNIT V - CONSERVATION EDUCATION AND AWARENESS

Wildlife / Animal magazines, Journals- How to write popular and Scientific articles - Magazine and Journal information - Wildlife, nature, environment games (examples) – Role of NGO's and Government organizations in wildlife conservation - Wildlife celebration days in India - Biotechnology in conservation.

43A

Core: X- Bioinformatics and Genomics

Unit-I

Biological Sequence Databases: Overview of various primary and secondary databases that deal with protein and nucleic acid sequences. Databases to be covered in detail are GenBank, EMBL, DDBJ, SwissProt, PIR and MIPS for primary sequences. Various specialized databases like TIGR, Hovengen, TAIR, PlasmoDB, ECDC etc., will also be discussed. Preliminary ideas of query and analysis of sequence information.

Unit – II

Sequence comparison Methods: Method for the comparison of two sequences viz., Dot matrix plots, NeedlemanWusch and SmithWaterman algorithms. Analysis of computational complexities and the relative merits and demerits of each method. Theory of scoring matrices and their use for sequence comparison.

Unit – III

Database Search Algorithms: Methods for searching sequence databases like FAST and BLAST algorithms. Statistical analysis and evaluation of BLAST results. Coordinates, lines and increments, function, shifting graphs, trigonometric functions.

Unit – IV

Pattern Recognition Methods in Sequence Analysis: Concept of a sequence pattern, regular expression based patterns. The use of pattern databases like PROSITE and PRUNTS. Concept of position specific weight matrices and their use in sequence analysis. Theory of profiles and their use with special reference to PSIBLAST. Markov chains and Markov models and their use in gene finding. Concept of HMMS, the Forward backward and the Viterbi algorithm. The BaumWelch algorithm for training a HMM. Use of profile HMM for protein family classification.

Unit – V

Genomics, Computer Graphs and Molecular Modeling: Genomics – Structural genomics – sequencing and sequence analysis software like GCG, etc. Functional genomics – gene finder etc. Gene knockouts in animals – Gene therapy: Somatic and germ line gene therapy in vivo and ex vivo – Design of siRNA vectors and Gene silencing.

Computer Graphics – Creation of recombinant molecules - Virtual analysis of biomolecules using vector NT, DNA star etc.,

Molecular modeling: Modeling of different macromolecules and structural analysis using hyperchem etc.,

Practical:

1. Internet Basics
2. Retrievals.
3. Molecular Dissection.
4. Gene Finding.

5. Similarity Search.
6. Write Programs.
7. Cloning.

4LA

Paper: IV – Practical (Evolution and Biogeography, Wildlife Biology and Conservation and Animal Biodiversity)

I. Evolution and Biogeography:

Fossils Characteristics and identification:

1. Coelenterate – Coral (Carboniferous)
2. Arthropoda – Trilobite (Silurian)
3. Mollusca – Lamellibranch (Recent)
4. Mollusca – Gastropod (Tertiary)
5. Mollusca – Ammonite (Jurassic)
6. Echinodermata – Crinoid (Carboniferous)
7. Echinodermata – Echinoid (Jurassic)
8. Vertebrata – Shark’s tooth (Miocene)

Fossil specimens:

Fish vertebra, dextral snail, sea urchin fossil brachiopos fossil, animal tooth fossil, fossil of fish, fossil cast of archaeopteryx lithographica, fossil cast of trilobite and fossil of pecten.

II. Wildlife Biology and Conservation & Animal Biodiversity:

1. Inventories/Surveys.
2. Field Techniques.
3. Identification and use of keys – Reference specimen.
4. Collection and preservation.
5. Introduction to computerized techniques – Remote sensing CAMP and GIS and their modules for conservation.
6. IUCN Red List Exercise and PVA modeling.
7. Statistical analysis/interpretation.
8. Technical writing and reporting of field studies.
9. Public presentation.
10. Field Project/ Report – Visit to Zoological parks, wildlife sanctuaries and biosphere reserves.

Practical Components:

The M.Sc. Animal Biotechnology Practical Examination having the following Marks:

Time: 1 .20 minutes

Maximum Marks – 25

Major Practical
Spotters
Record

10 Marks
2x5 = 10 Marks
5 Marks

Total 25 Marks

Theory Components:

The M.Sc. Animal Biotechnology Theory Examination having the following Marks.

Core Papers: Maximum Marks - 75

Internal: 15 Marks

Test - 5 Marks
Assignment - 5 Marks
Seminar - 5 Marks

External: 60 Marks

Part A - 10x1=10 Marks (Question No. 1 to 10)

Answer all questions. All questions carry equal marks.

Example:

1. Define.
2. Multiple Choice Questions
3. True or False
4. What are the natural processes of extinction?

Part B – 5x4 = 20 Marks (Either or type – Question No. 11 to 15)

Answer all questions. All Question carry equal marks. Each answer should not exceed 2 pages.

Part C – 5x6 = 30 Marks (Either or type – Question No. 16 to 20)

Answer all questions. All Question carry equal marks. Each answer should not exceed 4 pages.

Elective Papers: Maximum Marks - 100

Internal: 40 Marks

Test - 20 Marks

Assignment - 10 Marks

Seminar - 10 Marks

External: 60 Marks

Part A – 10x1=10 Marks (Question No. 1 to 10)

Answer all questions. All questions carry equal marks.

Example:

1. Define.
2. Multiple Choice Questions
3. True or False
4. What are the natural processes of extinction?

Part B – 5x4 = 20 Marks (Either or type – Question No. 11 to 15)

Answer all questions. All Question carry equal marks. Each answer should not exceed 2 pages.

Part C – 5x6 = 30 Marks (Either or type – Question No. 16 to 20)

Answer all questions. All Question carry equal marks. Each answer should not exceed 4 pages.

Supportive Papers: Maximum Marks - 50

Internal: 20 Marks

Test - 10 Marks

Assignment - 5 Marks

Seminar - 5 Marks

External: 30 Marks

Part A – 6x1=6 Marks (Question No. 1 to 6)

Answer all questions. All questions carry equal marks.

Example:

1. Define.
2. Multiple Choice Questions
3. True or False
4. What are the natural processes of extinction?

Part B – 3x3 = 9 Marks (Either or type – Question No. 7 to 9)

Answer all questions. All Question carry equal marks. Each answer should not exceed 2 pages.

Part C – 3x5 = 15 Marks (Either or type – Question No. 10 to 12)

Answer all questions. All Question carry equal marks. Each answer should not exceed 4 pages.

Practical Components:

The Diploma in Animal Biodiversity and Conservation Practical Examination having the following Marks:

Total Marks: 100
Internal: 40 Marks

Time: 1 .50 minutes

Major Practical		15 Marks
Minor Practical		10 Marks
Spotters (A & B)	2x5	= 10 Marks
Record		5 Marks

Total		40 Marks

External: 60 Marks

Time: 3.00 Hrs.

Major Practical		1x20 = 20 Marks
Minor Practical		12x10 = 10 Marks
Spotters (A, B, C, D and E)	4x 5	= 20 Marks
Record		10 Marks

Total		= 60 Marks

Theory Components:

The Diploma in Animal Biodiversity and Conservation Theory Examination having the following Marks.

Internal: 40 Marks

Test - 20 Marks
Assignment - 10 Marks
Seminar - 10 Marks

External: 60 Marks

Part A – 10x1=10 Marks (Question No. 1 to 10)

Answer all questions. All questions carry equal marks.

Example:

1. Define.
2. Multiple Choice Questions
3. True or False
4. What are the natural processes of extinction?

Part B – 5x4 = 20 Marks (Either or type – Question No. 11 to 15)

Answer all questions. All Question carry equal marks. Each answer should not exceed 2 pages.

Part C – 5x6 = 30 Marks (Either or type – Question No. 16 to 20)

Answer all questions. All Question carry equal marks. Each answer should not exceed 4 pages.
