

# M. Sc. Medical Physics

## Syllabus

**UNIVERSITY DEPARTMENT**

**Program Code: MPHA**

**2021 – 2022 onwards**

**BHARATHIAR UNIVERSITY**

(A State University, Accredited with “A” Grade by NAAC,  
Ranked 13<sup>th</sup> among Indian Universities by MHRD-NIRF,  
World Ranking: Times -801-1000, Shanghai -901-1000, URAP - 982)

**Coimbatore - 641 046, Tamil Nadu, India**

<b>Program Educational Objectives (PEOs)</b>	
On completion of M.Sc., Medical Physics program, the students are expected to:	
PEO1	Expected to demonstrate the Physics, Biological and Safety aspects of Diagnostic radiology, External Beam Radiotherapy, Brachytherapy, Radiation Detection, Radiation Dosimetry, Advanced Radiotherapy Techniques and Nuclear Medicine for effective treatment of patients.
PEO2	Learning step by step quality assurance/quality control procedures in medical imaging equipment and Radiation Oncology.
PEO3	Categorize proper application of dosimetry and its instruments in medical imaging, and radiation dose delivery for Radiation Oncology.
PEO4	The applicators insertion of radioactive implants directly into the tissue during appropriate brachytherapy treatment.
PEO5	To prepare them as effective RSO to meet the regulatory requirements in radiation medicine for patient, personnel and public.

<b>Program Specific Outcomes (PSOs)</b>	
After the successful completion of M.Sc. Medical Physics program, the students are expected to:	
PSO1	Disseminating their knowledge acquired through the state-of-the art radio therapeutic techniques and medical imaging for providing and ensuring safety treatment for patients and integrate with the team/ leadership.
PSO2	As medical physicist/radiation safety officers they could achieve continuous improvement in their professional career and advanced technologies in pace with the developments in health care.
PSO3	They will be effective educators/trainers in their respective discipline.
PSO4	Inventing new technology in the field of Radiation Oncology and Imaging.

<b>Program Outcomes (POs)</b>	
On successful completion of the M. Sc. Medical Physics program	
PO1	Have basic knowledge in Atomic Physics, Nuclear Physics, Solid State Physics, Ionizing and Non-Ionizing Radiation Physics.
PO2	Understand the Applied Mathematics in Radiation Sciences.
PO3	Have domain knowledge in electronic components, computing skills using MATLAB, MATHEMATICA, and STATISTICA and analyze the results obtained in radioactive counting, medical imaging or therapy.
PO4	Gain skills on clinical aspects of radiation oncology with necessary knowledge in anatomy, pathology, site specific signs, symptoms, diagnosis and management.
PO5	Possess knowledge on Radiation Physics, Diagnostic radiology, External beam Radiotherapy, Brachytherapy, Radiation Detection, Radiation Dosimetry, Advanced Radiotherapy Techniques, Radiation Biology, and Radiation Safety as per National as well as International regulatory agencies.
PO6	Exhibit skills in handling GM counter based instruments, Gamma ray spectrometer, analyze the sources, and determine linear and mass attenuation of sources, optically stimulated luminescence dosimetry.
PO7	Hands-on experience with Treatment Planning System, LINAC, and QA tools.
PO8	Understand the issues of managing radiation safety programme as stipulated by regulatory bodies to become a Radiological Safety Officer (RSO).
PO9	Distinguish imaging techniques based on the demonstration of live blood perfusion imaging in nuclear medicine through PET-CT, SPECT and Gamma Camera.
PO10	Hands on experience to handle Radiation Physics, Radiology, Radiotherapy and Nuclear Medicine procedures and experiments. Ability to do research in Medical Physics and allied areas.

## BHARATHIAR UNIVERSITY:: COIMBATORE 641 046

### M. Sc. Medical Physics Curriculum (University Department)

(For the students admitted during the academic year 2021 – 22 onwards)

Course Code	Title of the Course	Credits	Hours/ Week		Maximum Marks		
			Theory	LAB	CIA	ESE	Total
FIRST SEMESTER							
13A	Radiological Physics	4	4	0	50	50	100
13B	Radiological Mathematics and Statistical Analysis	4	4	0	50	50	100
13C	Radiation Detection and Measurement	4	4	0	50	50	100
13D	Radiation Generators	4	4	0	50	50	100
13E	External Beam Radiation Therapy	4	4	0	50	50	100
1EA (OR) 1EB	Electronics and Instrumentation (or) Non-Ionizing Radiation Physics	4	3	0	50	50	100
1EC (OR) 1ED	Atomic, Molecular, & Nuclear Physics (or) Biomedical Instrumentation	4	3	0	50	50	100
13P	Radiation Instrumentation Lab	4	0	4	50	50	100
Total		32	26	4	400	400	800
SECOND SEMESTER							
23A	Applied Anatomy and Physiology	4	4	0	50	50	100
23B	Medical Imaging Technology	4	4	0	50	50	100
23C	Radiation Standards	4	4	0	50	50	100
23D	Radiation Biology	4	4	0	50	50	100
23E	Quality Assurance for Diagnostic and Therapeutic Equipment	4	4	0	50	50	100
2EA (OR) 2EB	Numerical and Computational techniques (or) Advances in Medical Physics	4	4	0	50	50	100
2EC (OR) 2ED	Solid State Physics (or) Biological Dosimetry	4	3	0	50	50	100
23P	Medical Physics Lab I	4	0	3	50	50	100
Total		32	27	3	400	400	800
26A	Summer Training	-	-	-	-	-	-

<b>THIRD SEMESTER</b>							
33A	Radiation Dosimetry and Calibration	4	5	0	50	50	100
33B	Recent advances in Radiotherapy	4	5	0	50	50	100
33C	Radiation Protection	4	5	0	50	50	100
33D	Radiation Hazards Evaluation and Control	4	5	0	50	50	100
33E	Nuclear Medicine	4	5	0	50	50	100
33F	Advanced Radiation Dosimetry	4	5	0	50	50	100
<b>Total</b>		<b>24</b>	<b>30</b>	<b>0</b>	<b>300</b>	<b>300</b>	<b>600</b>

<b>CO- SCHOLASTIC COURSES</b>							
(The Co-scholastic courses are only counted for the final grading and ranking. However, for the award of the degree, the completion of co-scholastic courses is also mandatory)							
Value Added Course I: Yoga for Interpersonal Skills		2	2	-	50	-	50
Value Added Course II: Medical Radiological Safety Officer (MRSO) Training		2	2	-	50	-	50
Online course from MOOC/ SWAYAM/ NPTEL/ Coursera/ e-Pataskala etc.,		2	-	-	-	-	-
<b>Grand Total</b>		<b>106</b>	<b>87</b>	<b>20</b>	<b>1350</b>	<b>1250</b>	<b>2600</b>
GS121	Supportive course offered to ODD semester students of other Departments: Diagnostic Radiology	2	2	0	25	25	50
GS122	Supportive course offered to EVEN semester students of other departments: Radiotherapy for Cancer	2	2	0	25	25	50

# **First Semester**

Course code	13A	RADIOLOGICAL PHYSICS	L	T	P	C
Core/Elective/Supportive		Core	4	0	0	4
Pre-requisite		Atomic and Nuclear Physics	Syllabus revision		2021-22	
Course Objectives:						
The main objectives of this course are to:						
1. Study electromagnetic spectrum, radiation sources, types and its properties						
2. Study radiation Quantities and Units used in the industry						
3. Understand the interaction of directly and indirectly ionizing radiation with matter and its effects.						
Expected Course Outcomes:						
On the successful completion of the course, student will be able to:						
1	Explain different types Electromagnetic Radiation and their sources/properties					K4
2	Explain different types of Radiation, their sources/properties.					K4
3	Radiation Quantities and Units.					K1
4	Physics aspects of Interaction of indirectly ionizing radiation with matter.					K3
5	Interaction of directly ionizing radiation with matter and its effects inside a living object.					K3
K1 - Remember; K2 - Understand; K3 - Apply; K4 - Analyze; K5 - Evaluate; K6 - Create						
Unit:1		Electromagnetic Spectrum	8 --hours			
Production, properties and classification of electromagnetic radiation- Different sources of radiation - radio waves, microwaves, infrared, visible, ultra violet radiation, X and Gamma rays- production, physical properties and their interaction with tissues.						
Unit:2		Radioactivity	8 --hours			
Radioactivity - General properties of alpha, beta and gamma rays - Laws of radioactivity - Half life and Average Life- Laws of successive transformations - Natural radioactive series - Radioactive equilibrium - Alpha ray spectra - Beta ray spectra - Gamma emission - Electron capture - Internal conversion - Nuclear isomerism - Artificial radioactivity.						
Unit:3		Ionizing Radiation Quantities and Units	10 --hours			
Radiometric quantities: Activity, exposure, Particle flux, fluence, fluence rate– Energy flux and energy fluence- Interaction Quantities: Linear and mass attenuation coefficients, Mass energy transfer and mass energy absorption coefficients, Stopping power, Mass Stopping Power and LET- Dosimetric Quantities: Exposure, Absorbed Dose, Kerma, Terma, Charged particle equilibrium (CPE) – Relationship between Kerma, absorbed dose and exposure under CPE - Radiation chemical yield - W value- Radioactivity Units: Becquerel & Curie, exposure units - C/kg & Roentgen, Gray & Rad, Sievert & Rem.						
Unit:4		Interaction of indirectly ionizing radiation with Matter	10--hours			
Interaction of electromagnetic radiation with Matter: Exponential attenuation - Thomson scattering - Photoelectric and Compton process and energy absorption - Pair production - Attenuation and mass energy absorption coefficients - Relative importance of various processes. Interaction of neutrons with matter: Classification of neutrons, neutron sources, slow and fast						

neutron interactions, microscopic and macroscopic interaction cross section, charged particle emission,-radiativecaptureanditssignificanceinradiationdosetohumans–elasticandinelastic scattering-Neutroninducednuclearreactions-neutroninducedactivation–fission–Neutron attenuation.										
Unit:5	Interaction of directly ionizing particles with matter								10--hours	
Interaction of charged particles with matter: Classical theory of inelastic collisions with atomic electrons-Energylossperionpairbyprimaryandsecondaryionization-Dependenceofcollision energy losses on the physical and chemical state of the absorber - Cerenkov radiation - Electron absorptionprocess–Scattering,ExcitationandIonization-Radiativecollision–Bremmstrahlung- Continuous slowing down approximation (CSDA) - transmission and depth dependencemethods - Range energy relation - Back scattering. Interaction of heavy charged particles: Energy loss by collision - Range energy relation - Bragg curve – Spread out Bragg Peak (SOBP) - Specific ionization - Bethe Bloch Formula.										
Unit:6	Contemporary Issues								2 hours	
<a href="https://www.youtube.com/watch?v=p2rx8Qpw49w">https://www.youtube.com/watch?v=p2rx8Qpw49w</a> <a href="https://www.youtube.com/watch?v=RzU8BZVN1BQ">https://www.youtube.com/watch?v=RzU8BZVN1BQ</a>										
Total Lecture hours								48 --hours

Course code	13B	RADIOLOGICAL MATHEMATICS AND STATISTICAL ANALYSIS	L	T	P	C
Core/Elective/Supportive	Core		4	0	0	4
Pre-requisite	Mathematical Physics - UGlevel		Syllabus rsion	2021- 22		
Course Objectives:						
The main objectives of this course is to:						
1. Expose the student to learn the different types of probability, measures of central tendency and their mathematical properties						
2. Provide the correlation and regression analysis to find the relation between two sets of data.						
3. Understand the methods of counting and their usage in medical fields.						
Expected Course Outcomes:						
On the successful completion of the course, student will be able to:						
1	Choose the correct probability for medical treatment, and correct measure of central tendency for practical applications					K2
2	Apply the methods of deviations and distribution to set of data and measure the corresponding parameters from central tendency					K3
3	Do an analysis of two set of data and calculate unknown one from known set of data					K4
4	Apply the particular distribution function for particular sampling size					K3
5	Gain adequate knowledge and working principle of the Gamma ray, Beta ray counting methods and medical statistics.					K3
K1 - Remember; K2 - Understand; K3 - Apply; K4 - Analyze; K5 - Evaluate; K6 - Create						
Unit:1						
Probability, Statistics and Measure of central tendency			10--hours			
Probability - addition and multiplication laws of probability, conditional probability, population variates - collection, tabulation and graphical representation of data. Basic ideas of statistical distributions, frequency distributions, and measures of central tendency-arithmetic mean, Mathematical properties of mean, median, mode, Geometrical mean, Harmonic Mean, Mathematical properties of Geometrical mean, Harmonic Mean, relationship among the averages, General limitation of average.						
Unit:2						
Measures of Variation			10--hours			
Objectives of measuring Variation, Properties of a good measure of variation, Method of studying variation- The range, mean deviation, standard deviation/root means square deviation, Variance, Absolute and relative measures of variation, Coefficient of variation, Merits and limitations of standard deviation. Skewness, moments and kurtosis.						
Unit:3						
Correlation and Regression Analysis.			8--hours			
Correlation, Types of correlation, Methods of ascertaining correlation - Scatter diagram, Karl Pearson's coefficient, Rank method, merits and limitations of all methods, Regression, Difference between correlation and regression, Regression coefficient, calculation of regression coefficients.						
Unit:4						
Sampling Distribution			8--hours			
Uncertainty calculations, error propagation, time distribution between background and sample, minimum detectable limit. Binomial distribution, Poisson distribution, Gaussian distribution,						

exponential distribution - additive property of normal variates, confidence limits, applications of Bivariate distribution, Chi-Square distribution, F- distribution, t-distribution- overview of biostatistical tools- reference styles, reference manager, citation manager.		
<b>Unit:5</b>	<b>Counting statistics</b>	<b>10--hours</b>
Statistics of nuclear counting - Application of Poisson's statistics - Goodness-of-fit tests -Lexie's divergence coefficients Pearson's chi-square test and its extension - Random fluctuations, - Evaluation of equipment performance - Signal-to-noise ratio Efficiency and sensitivity of radiation detectors - Statistical aspects of gamma ray and beta ray counting - Special considerations in gas counting and counting with proportional counters - Statistical accuracy in doubleisotopetechnique-Samplingandsamplingdistributions-confidenceintervals.Hypothesis testing and errors- Regression analysis- Linear regression: Examples and exercises.		
<b>Unit:6</b>	<b>Contemporary Issues</b>	<b>2 hours</b>
Index numbers, Small sampling theory, and Interpretation of Data, <a href="https://nptel.ac.in/courses/111/104/111104073/">https://nptel.ac.in/courses/111/104/111104073/</a>

Course code	13C	RADIATION DETECTION AND MEASUREMENT	L	T	P	C
Core/Elective/Supportive	Core		4	0	0	4
Pre-requisite	Electronics and Instrumentation		Syllabus Version		2021-22	
Course Objectives:						
The main objectives of this course are to:						
1. To understand the technical know- how of all the radiation detectors used for cancer diagnosis, treatment, and radiological safety.						
2. To choose an appropriate detector for appropriate measurement.						
3. To learn about the working of radiation instruments used in advanced radiation therapy.						
4. To understand the applications and uses of radiation safety devices.						
5. To understand the various factors behind the measurement of radiation and analysis of data.						
Expected Course Outcomes:						
On the successful completion of the course, student will be able to:						
1	Update fundamental knowledge, technological advancements and potential applications of radiation detectors.					K3
2	Choosing appropriate detectors to reduce the errors in treatment.					K3
3	Learn about radiation instruments available for research and the scope for further research.					K2
4	Acquire knowledge on radiation safety and personal monitoring devices.					K3
5	Measure radiation precisely and interpret their results accurately with statistical significance.					K3
K1 - Remember; K2 - Understand; K3 - Apply; K4 - Analyse; K5 - Evaluate; K6 - Create						
Unit:1						
Gas Filled Detectors		10--hours				
Basic principles of radiation detection- Gas Filled detectors - Ionization chambers, - Theory and design - Construction of condenser type chambers and thimble chambers - Gas multiplication - Proportional and GM Counters – basic detection mechanism, types of radiation detected, mode of operation, different variants of detectors (e.g. sealed, flow type, high pressure, multi-wire, position sensitive) - Types of instruments which uses gas filled detectors – radiation dosimeters, survey meters, contamination monitors- Cylindrical, plane parallel, spherical and well-type ionization chambers, Extrapolation chamber- Dead time and recovery time..						
Unit:2						
Solid State Detectors		12--hours				
Scintillation detectors: Advantages of scintillation detectors, properties of ideal scintillator, basic electronic blocks in scintillation detector setup. Radiation detection mechanism of organic and inorganic scintillators, Characteristics of organic and inorganic counters -types of scintillators for various applications.						
Semiconductor detectors and its application for gamma spectrometry, Diode and MOSFET dosimeters - Chemical dosimeters- Radiographic Film: Components of radiographic film, principle of image formation on film, double and single emulsion film, sensitometric parameters of film (density, speed, latitude etc.) and Radio chromic films - Thermo luminescent Dosimeters (TLD) – Optically stimulated Luminescence dosimeters (OSLD) – Radiophoto luminescent dosimeters (RPLD).						
Neutron Detectors: Slow Neutron Detection and Fast Neutron Detection methods- Nuclear track emulsions for fast neutrons- Solid State Nuclear track (SSNTD) detectors- Neutron detection by						

activation, BF <sub>3</sub> , <sup>3</sup> He, Bubble detectors. Calorimeters - New Developments (direct ion storage (DIS), diamond detectors etc).		
<b>Unit:3</b>	<b>Radiation Dosimeters &amp; Monitoring Instruments</b>	<b>10--hours</b>
Dosimeters based on condenser chambers - Pocket chambers - Dosimeters based on current measurement - Different types of electrometers – MOSFET - Diode Detectors, Semi-conductor Detectors., Vibrating condenser and Varactor bridge types - Secondary standard therapy level dosimeters-Farmer-type Dosimeters:ThimblechambersandParallel-platechambers-Properties of Farmer-type chambers like sensitivity, energy dependence, stem effect, and influence of temperatureandpressure,biasvoltage,directiondependence–referenceandfield-levelchambers – small volume chambers for RFA — Radiation field analyser (RFA) - Radioisotope calibrator - Multipurpose dosimeter (used in Diagnostic Radiology) - Water phantom dosimetry systems - Brachytherapy dosimeters – well type chamber-Isotope calibrators-Thermo luminescent dosimeter readers for medical applications - Calibration and maintenance of dosimeters.		
<b>Unit:4</b>	<b>Instruments for Personnel and Area Monitoring</b>	<b>7--hours</b>
Instruments for personnel monitoring - TLD badge readers – Personnel Monitoring film densitometers – OSLD readers - Glass dosimeter readers – Working principle of Digital pocket dosimeters using solid state devices and GM counters. Instruments for area monitoring: Portable and fixed area monitors, beta-gamma zone monitor, survey meters, Gamma area (Zone) alarm monitors –wide range survey instrument- Teletector. Contamination monitoring instruments for portable contamination monitor, alpha, beta and gamma radiation detection- Hand and Foot monitors –Whole Body counter, Portal Monitors - Scintillation monitors for X and gamma radiations - Neutron area Monitors, Tissue equivalent surveymeters-Fluxmeteranddoseequivalentmonitors-neutronpersonnelmonitors-Properties ofsurveyometersandpersonalmonitors(Sensitivity,energydependence,directionaldependence, discrimination between different types of radiation, Uncertainties in their measurements, etc.).		
<b>Unit:5</b>	<b>Nuclear Medicine Instruments</b>	<b>7--hours</b>
Instruments for counting and spectrometry - Portable counting systems for alpha and beta radiation - Gamma ray spectrometers –Single and Multichannel Analyser– HPGe- Liquid scintillation counting system (Organic/Inorganic)- RIA counters – Whole body counters - Air Monitors for radioactive particulates and gases.		
<b>Unit:6</b>	<b>Contemporary Issues</b>	<b>2 hours</b>
Expert lectures, online seminars – webinars 1.Ionisation Chambers & Proportional Counters - <a href="https://youtu.be/avvXftiyBEs">https://youtu.be/avvXftiyBEs</a> 2.GM counter - <a href="https://youtu.be/jxY6RC52Cf0">https://youtu.be/jxY6RC52Cf0</a> 3.SemiConductorDetectors <a href="https://youtu.be/c1boCCYs77Q">https://youtu.be/c1boCCYs77Q</a> 4.Film Badge - <a href="https://youtu.be/eGymsO6Assc">https://youtu.be/eGymsO6Assc</a> 5. Course code	13D	RADIATION GENERATORS	L	T	P	C
Core/Elective/Supportive	Core		4	0	0	4
Pre-requisite	Physics - Graduate level		Syllabus Version		2021-22	
Course Objectives:						
The main objectives of this course is to:						
1. To learn the construction and working of different types of particle accelerators.						
2. To learn the construction of X-ray generator used in Diagnostic radiology.						
3. To learn the construction and working of various equipment used in external beam therapy						
4. To learn the construction and working of various equipment used in Brachytherapy						
5. To learn the radioisotopes produced from the above equipment and their medical applications						
Expected Course Outcomes:						
On the successful completion of the course, student will be able to:						
1	Knew about the different types of particle accelerators and their medical applications.					K2
2	Learnt to operate the X-ray generator used in Diagnostic radiology					K3
3	Learnt to operate the equipment used in external beam therapy					K3
4	Learnt to operate the equipment used in Brachytherapy					K3
5	Know about the radioisotopes produced from particle accelerators for external beam therapy and Brachytherapy					K2
K1 - Remember; K2 - Understand; K3 - Apply; K4 - Analyze; K5 - Evaluate; K6 - Create						
Unit:1	X-ray Generators				10--hours	
Discovery - Production - Properties of X-rays - Characteristics and continuous spectra - Design of hot cathode X-ray tube - Basic requirements of medical diagnostic, therapeutic and industrial radiographic tubes - Rotating anode tubes - Hooded anode tubes - Rating of tubes –standard exposure charts, Limitations on loading Safety devices in X-ray tubes - Insulation and cooling of X-ray tubes –Design requirements for x-ray equipment, Faults detection in X-ray equipments such as pitting of anode, filament evaporation etc., - Types of x-ray units (Fixed radiography, CT, Interventional radiology, C-Arm, Mammography, Bone Mineral Densitometer, dental X-ray units etc.,). Filtration in the x-ray machines-inherent, target and added filters.						
Unit:2	Particle Accelerators				10--hours	
Particle accelerators for industrial, medical and research applications - The Resonant transformer Cascade generator - Van De Graff Generator - Pelletron - Betatron - Synchro- Cyclotron- Linear Accelerator - Klystron and magnetron - Travelling and Standing Wave Acceleration -Microtron - Electron Synchrotron-Proton synchrotron- Hadron (proton/carbon ion) accelerators. Working principle of Cyclotron and charged particle accelerators, Applications of cyclotrons in medicine, Types of Cyclotrons: self-shielded and unshielded (in-bunker) and locally shielded. Beam transport systems - Beam delivery systems- Energy slits – degrader - Ridge filter - Range Shifter - Uniform and Pencil beam scanning systems-beam dump- Auxiliary equipment and their safety significance: vacuum pumps, RF-power, magnet power supply; cooling system, control software and programs used for medical cyclotron operation.						
Unit:3	External Beam Therapy (EBRT) Equipment				10--hours	
Working principles of Telecobalt, Gammaknife, Linear Accelerator, Cyber Knife, Tomotherapy, Intra Operative Radiotherapy & Proton/carbon ion Therapy. Components of beam delivery mechanism such as target, flattening filter, scattering foil, bending magnet, monitor chamber,						

Collimator jaws, MLC, micro MLC and other systems specific to various types of equipment. Safety interlocks in beam delivery process. Source design and classification- beam collimation and penumbra - trimmers and breast cones used in telecobalt unit. Wedges, electron applicators, cone beam CT, couch, sagittal lasers.		
<b>Unit:4</b>	<b>Brachytherapy Equipment</b>	<b>8--hours</b>
Definition and classification of brachytherapy techniques - surface mould, intracavitary, interstitial and intraluminal techniques. Dose rate considerations and classification of brachytherapy techniques - Low dose rate (LDR), high dose rate (HDR) and pulsed dose rate (PDR). After loading techniques - Advantages and disadvantages of manual and remote after loading techniques. Catheters, safety shields for wire cutting in LDR.		
<b>Unit:5</b>	<b>Radiation Sources and their Medical Applications</b>	<b>8--hours</b>
Radiationsources-Naturalandartificialradioactivesources-Largescaleproductionofisotopes Reactor produced isotopes ( $^{60}\text{Co}$ , $^{192}\text{Ir}$ , $^{99}\text{Mo}$ etc.,) - Cyclotron produced isotopes ( $^{18}\text{F}$ , $^{13}\text{N}$ , $^{15}\text{O}$ , $^{11}\text{C}$ )- Fission products ( $^{137}\text{Cs}$ , $^{99}\text{Mo}$ , $^{131}\text{I}$ , $^{90}\text{Sr}$ )–Teletherapy sources– Requirement for brachytherapysources-Descriptionofradiumandradiumsubstitutes- $^{137}\text{Cs}$ , $^{60}\text{Co}$ , $^{192}\text{Ir}$ , $^{125}\text{I}$ and other commonly used brachytherapy sources. Beta ray applicators – ophthalmicapplicators ( $^{90}\text{Sr}$ , $^{125}\text{I}$ , $^{106}\text{Ru}$ etc.,) Thermal and fast neutron sources ( $^{241}\text{Am}$ -Be, $^{252}\text{Cf}$ etc.,).		
<b>Unit:6</b>	<b>Contemporary Issues</b>	<b>2 hours</b>
1. <a href="https://www.aapm.org/meetings/2010AM/documents/biggs2.pdf">https://www.aapm.org/meetings/2010AM/documents/biggs2.pdf</a>

Course code	13E	EXTERNAL BEAM RADIATION THERAPY	L	T	P	C
Core/Elective/Supportive		Core	4	0	0	4
Pre-requisite		Radiological Physics	Syllabus Version		2021-22	
Course Objectives:						
The main objectives of this course are to:						
<div><div>1.</div><div>To applying knowledge of treatment parameters like Percentage Depth Dose, Tissue Phantom Ratios for computing treatment time calculation required for treatment of radiotherapy patients. To check the dosimetry parameter of treatment machines for using dosimetry tools like RFA, phantoms and etc.</div></div> <div><div>2.</div><div>To use parameters like treated volume, irradiated volume, hot spot, maximum target dose in choosing a better treatment plan. To adopt and apply 2 D and 3 D simulation techniques CT, MRI, US and PET fusion techniques.</div></div> <div><div>3.</div><div>To recognize the need and ability to select proper electron energy for tumors at different depth.</div></div> <div><div>4.</div><div>To compare the merits of electron, neutron and X-ray and Gamma ray beams and heavy charged particles and use them prudently for different types of tumors.</div></div> <div><div>5.</div><div>To learn periodic reference dosimetry with calibrated ionization chamber and patient specific dose measurement.</div></div>						
Expected Course Outcomes:						
On the successful completion of the course, student will be able to:						
1	Understand the principles behind dosimetry parameters and use them for treatment time calculation					K2
2	Learnt advanced concepts in image registration, target delineation, treatment planning for inverted Y fields, SSD and SAD techniques.					K2
3	Understand the physics behind the electron energy selection.					K2
4	Clinically evaluate the merits and demerits of different types of ionization radiation.					K5
5	Learnt periodic reference dosimetry with calibrated ionization chamber and patient specific dose measurement.					K2
K1 - Remember; K2 - Understand; K3 - Apply; K4 - Analyze; K5 - Evaluate; K6 - Create						
Unit:1						
Dosimetry Parameters		10--hours				
Central axis dosimetry parameters: percentage depth doses (PDD), tissue air ratio (TAR), back scatter factor/Peak scatter factor (BSF/PSF) - tissue phantom ratio (TPR) - tissue maximum ratio (TMR)-collimator scatter factor, phantom scatter factor and total scatter factors-relationship between TAR and PDD and its applications - relationship between TMR and PDD and its applications – scatter air ratio(SAR) – scatter maximum ratio(SMR)- off axis ratio field factors- surface dose and buildup region- Description and measurement of isodose curves/ charts- Dosimetry data resources..						
Unit:2						
Phantoms and Beam Modifiers		8--hours				
Measuring tools/phantoms: Water phantom and Tissue equivalent/solid water phantoms for dosimetry Radiation field analyser (RFA), Array detectors for beam analysis, phantom for beam energy check etc. Beam modifying and shaping devices – Block Cutting machines- wedge filters – universal, motorized and dynamic wedges - treatment planning with wedges– shielding blocks - field						

shaping, custom blocking - tissue compensation – design of compensators, 2D compensators,3D compensators- multi leaf collimators (MLC) and microMLC- special considerations in treatment planning - skin dose, field matching, integral dose, DVHs – differential, integral.		
<b>Unit:3</b>	<b>Treatment Planning in Teletherapy</b>	<b>10--hours</b>
TargetvolumedefinitionanddoseprescriptioncriteriaasperICRUprotocols-SSDandSADset ups - two and three dimensional localization techniques - contouring - simulation of treatment techniques - field arrangements - single, parallel opposed and multiple fields - corrections for tissue inhomogeneity, contour shapes and beam obliquity - integraldose. Treatment Techniques: Conventional and conformal radiotherapy, Treatment time and Monitor unit calculations, Arc/ rotation therapy - mantle and inverted Y fields.		
<b>Unit:4</b>	<b>Physics of Electron and Particulate Beam Therapy</b>	<b>10--hours</b>
Clinicalelectronbeams-energy specification-electronenergyselectionforpatienttreatment- depth dose characteristics ( $D_s, D_x, R_{100}, R_{90}, R_{50}, R_p$ etc.) - beam flatness and symmetry - penumbra-isodoseplots-monitorunitcalculations-outputfactorformalisms-effectofair gap on beam dosimetry – effective SSD.		
<b>Unit:5</b>	<b>Particle Beam Physics</b>	<b>8--hours</b>
Basic proton interaction – Bragg peak, proton scanning techniques, basic neutron interactions, Particulate beam therapy - Relative merits of electron, X-ray, gamma, proton, carbon ion and neutron beams.		
<b>Unit:6</b>	<b>Contemporary Issues</b>	<b>2 hours</b>
Expert lectures, online seminars – webinars 1. Physics of radiation oncology - <a href="https://youtu.be/rJdvD4qvORQ">https://youtu.be/rJdvD4qvORQ</a> (1 Hr 55Min) 2. Photon dose distribution - <a href="https://youtu.be/r0z2dZIFaR4">https://youtu.be/r0z2dZIFaR4</a> (4 Min 12sec) 3. PDD- <a href="https://youtu.be/yD94bILngLQ">https://youtu.be/yD94bILngLQ</a> (15 Min) 4. Compensators and wedges - <a href="https://youtu.be/mxKAMqv7QXM">https://youtu.be/mxKAMqv7QXM</a> (2Min) 5. RFA - <a href="https://youtu.be/02yoEvIMWIs">https://youtu.be/02yoEvIMWIs</a> (3Min) 6. Core/Elective/Supportive		Elective	3	0	0	3
Pre-requisite		Semi-conductorPhysics	Syllabus version		2021-22	
<b>Course Objectives:</b>						
The main objectives of this course is to:						
1. Give the fundamental concepts of p-n junction, diode, transistors and amplifiers. 2. Study the boolean equations and data processing circuits, and understand the different types of Flip-flops, and Counters. 3. Provide fundamental knowledge of electric accessories for X-Ray tubes.						
<b>Expected Course Outcomes:</b>						
On the successful completion of the course, student will be able to:						
1	Understand the usage of various semiconductor based components/devices for constructing electronic circuits					K2
2	Able to understand the important of Op-amp IC and its applications					K2
3	To know functioning of various logic gates and fundamentals of digital electronics.					K3
4	Capable of how the digital data is stored and counted in CPU using flip-flops in counters					K3
5	Capable of analyzing the concepts, and various electric accessories of X-ray tubes, moreover X-ray generators for therapeutic applications					K4
<b>K1 - Remember; K2 - Understand; K3 - Apply; K4 - Analyze; K5 - Evaluate; K6 - Create</b>						
<b>Unit:1</b>	<b>Diode and Transistor</b>					<b>7--hours</b>
Semiconductors, Bonds in semiconductor, Classification of semiconductors, semiconductor diode - Half-wave rectifier, Centre -Tap full-wave rectifier, Full wave bridge rectifier, Bipolar junction transistors - CB connection and characteristics CE connection and characteristics - JFET - MOSFET						
<b>Unit:2</b>	<b>Operational amplifier</b>					<b>7--hours</b>
IntegratedCircuits-Operationalamplifiers(Op-Amp)andtheircharacteristics,theidealopAmp -Commonmoderejectionratio(CMMR),DifferentialAmplifier-Operationalamplifiersystems - Op-Amp Applications -Addition, subtraction, Integration and Differentiation - Voltage-to-current converter, Current-to-voltage converter, Logarithmic amplifier.						
<b>Unit:3</b>	<b>Digital Electronics - Data Processing</b>					<b>7--hours</b>
Logic gates - Boolean algebra - Boolean laws – De-Morgans theorem - Sum-of-Products method – Product of sum method - Multiplexers, 16 - 1 Multiplexer, Nibble multiplexer,De-multiplexer, 1-16de-mutplexercircuits-Decoder,BCDtoDecimaldecoders1of16decoder,Sevensegment decoders - Encoder, Decimal to BCDencoder.						
<b>Unit:4</b>	<b>Digital Electronics - Flip-flops and counters</b>					<b>6--hours</b>
Types of Flip Flops: RS, Clocked RS, D-Flip Flop, Edge-triggered D Flip flop – J K Flip flop - Master slave JK Flip flop, Counters: Ripple counters - up, down and up-down ripple counters - Asynchronous and synchronous counters.						

<b>Unit:5</b>	<b>Diagnostic X-ray units</b>	<b>7--hours</b>
Filament and high voltage transformers - High voltage circuits - Condenser discharge apparatus - Three phase apparatus - Voltage doubling circuits - Current and voltage stabilizers - Automatic exposure control - Automatic Brightness Control - Measuring instruments for Measurement of kV and mA - timers - Control Panels - Complete X-ray circuit - Image intensifiers and flat panel detectors - Computed Radiography and Digital Radiography Systems - Modern Trends.		
<b>Unit:6</b>	<b>Contemporary Issues</b>	<b>2 hours</b>
Expert lectures, online seminars - webinars		
Building Blocks, Design of control unit, Programming language		
	<b>Total Lecture hours</b>	<b>36--hours</b>

Course code	1EB	NON-IONIZING RADIATION PHYSICS	L	T	P	C
Core/Elective/Supportive	Elective		3	0	0	3
Pre-requisite	Atomic, Molecular, and Nuclear Physics		Syllabus version		2021-22	
<b>Course Objectives:</b>						
The main objectives of this course are to:						
1. Fundamentals of Non-ionising Radiation (NIR) physics, Various Tissue Opticstechniques.						
2. Mediphotonics and itsapplications.						
3. Radio Frequency and Microwaveapplications.						
<b>Expected Course Outcomes:</b>						
On the successful completion of the course, student will be able to:						
1	Explain different types of Non-ionizing radiation and its properties and applications.					K2
2	Explain different Application of optical properties of NIR in tissues.					K2
3	Applications of Laser in Medicine.					K3
4	Applications of Radio Frequency and Microwave in Medicine.					K3
5	Applications of Ultrasound in Medicine.					K3
<b>K1</b> - Remember; <b>K2</b> - Understand; <b>K3</b> - Apply; <b>K4</b> - Analyze; <b>K5</b> - Evaluate; <b>K6</b> - Create						
<b>Unit:1</b>						
<b>Fundamentals of Non-ionising Radiation physics</b>			<b>7 --hours</b>			
Electromagnetic spectrum - Different sources of Non Ionising radiation-their physical; properties-first law of photochemistry-Law of reciprocity- - Electrical Impedance and Biological Impedance- Principle and theory of thermography – applications.						
<b>Unit:2</b>						
<b>Applications of optical radiation</b>			<b>7 --hours</b>			
Introduction to optical radiations - UV, visible and IR sources - Lasers: Theory and mechanism- Lasers in Surgery - fluence measurement from optical sources - Optical properties of tissues – interaction of laser radiation with tissues– photothermal -photochemical – photoablation – electromechanical effect.						
<b>Unit:3</b>						
<b>Lasers in Medicine</b>			<b>7 --hours</b>			
Lasers in medicine-applications of Ultrafast pulsed Lasers -Lasers in dermatology, oncologyand cellbiology-Lasersinbloodflowmeasurement-Fiberopticsinmedicine-Hazardsoflasersand their safetymeasures.						
<b>Unit:4</b>						
<b>Ultrasound in Medicine</b>			<b>6 --hours</b>			
Production, properties and propagation of ultrasonic waves - Bioacoustics – Acoustical characteristics of human body- Ultrasonic Dosimetry - High power ultrasound in therapy.						
<b>Unit:5</b>						
<b>Radio Frequency and Microwave in Medicine</b>			<b>7 --hours</b>			
Production and properties- interaction mechanism of RF and mirocwaves with biological systems: Thermal and non-thermal effects on whole body, lens and cardiovascular systems:						
Thermal and non-thermal effects on whole body, lens and cardiovascular systems –tissue characterization and Hyperthermia and other applications.						
<b>Unit:6</b>						
<b>Contemporary Issues</b>			<b>2 hours</b>

Course code	1EC	ATOMIC, MOLECULAR AND NUCLEAR PHYSICS	L	T	P	C
Core/Elective/Supportive		Elective	3	0	0	3
Pre-requisite		ParticlePhysics	Syllabus version		2021-22	
Course Objectives:						
The main objectives of this course isto:						
1. Studythephysicsofvariousatomicmodelsandtheirrelativemerits/demeritsinexplainingthe properties ofmatter.						
2. Understand physics of absorption and emission spectra, and the action ofLASER,						
3. Know nature of nuclear force and the basic characteristics ofnuclei..						
Expected Course Outcomes:						
On the successful completion of the course, student will be able to:						
1	know about various atomic models					K1
2	Understand the significance of Spectra and lasers in exploring the material properties.					K2
3	Analyse the nature of nuclear force					K4
4	Understand the various nuclear models					K2
5	Understand how to exploit nuclear energy produced through various nuclear reactions.					K2
K1 - Remember; K2 - Understand; K3 - Apply; K4 - Analyze; K5 - Evaluate; K6 - Create						
Unit:1						
Atomic Physics		7--hours				
Thomson’s Model - Rutherford Model – Bohr’s Model of Hydrogen atom, Limitations – Sommerfeld model – Bohr’s Correspondence Principle – Davison- Germer Experiment – Uncertainty Principle – Phase and Group velocities - Hydrogen Spectrum– Stern-Gerlach Experiment – Electron spin, Gyromagnetic Ratio – Spin-Orbit Interaction (Fine Structure).						
Unit:2						
Molecular Spectra		7--hours				
Angular Momentum; L-S Coupling, J-J Coupling, Hund Rules – Zeeman Effect (Normal & Anomalous) – Characteristic X-ray Spectrum –Raman Effect: Theory, Characteristics and Applications – Absorption and emission of radiation by Matter – Einstein’s coefficients, Conditions for stimulated emission – Methods of Population Inversion- Components of laser– Typical Lasers: Ruby, He-Ne.						
Unit:3						
Properties of Nuclei and Nuclear Force		7--hours				
Isotopes, Isobars, Isotones and Mirror Nuclei – Nuclear Density and Binding Energy – Binding Energy and Stability – Mass Defect and Packing Fraction – Nuclear Size, Spin, Energy Levels andMagneticMoment–NuclearParity–NuclearForces–GroundStateofDeuteron–Exchange Forces; Yukawa Model and estimation of Mass ofMeson.						
Unit:4						
Nuclear Models		7--hours				
Liquid Drop Model; Semi-empirical Mass Formula – Mass Parabola: Prediction of Stability against $\beta$ -decay – Spontaneous Fission: Stability Limits – Potential Barriers for Fission –Stability Limits – Shell Model; Salient features – Predictions of Shell Model – Collective Model						

<b>Unit:5</b>	<b>Radioactive Disintegration and Nuclear Reactions</b>	<b>6--hours</b>
Radioactivity – $\alpha$ -particles; Geiger-Nuttal Law, Gamow Theory of $\alpha$ -decay, $\beta$ -decay: Determination of $\beta$ -energy, $\gamma$ -rays; Origin, $\gamma$ -ray Spectrum, Interaction with Matter – Energy of $\gamma$ -rays – Nuclear reactions; Types, Conservation Laws – Q-Values, Q-equation and its Solution – Nuclear Reactor; Construction and types – Nuclear Fusion; Natural Fusion, Controlled Fusion		
<b>Unit:6</b>	<b>Contemporary Issues</b>	<b>2 hours</b>
Expert lectures, online seminars - webinars		
<a href="https://www.youtube.com/watch?v=bukjtmM2djU">https://www.youtube.com/watch?v=bukjtmM2djU</a>

Course code	1ED	BIOMEDICAL INSTRUMENTATION	L	T	P	C
Core/Elective/Supportive		Elective	3	0	0	3
Pre-requisite		Basics electronics and instrumentation	Syllabus rsion		2021- 22	
Course Objectives:						
The main objectives of this course is to:						
1. Understand the different potentials and equivalent circuits for medical treatment.						
2. Know the fundamental concepts, functioning, applications of physiological devices and the importance of clinical and operation theatre equipment.						
3. Provide the knowledge of telemetry system, protection, and modern technologies used in the biomedical instrumentation.						
Expected Course Outcomes:						
On the successful completion of the course, student will be able to:						
1	Understand the different potentials and equivalent circuits for medical treatment					K1
2	Get the prior knowledge of fundamental concepts, functioning and applications of physiological devices					K2
3	Study the importance of clinical and operation theatre equipment					K4
4	Able to handle the telemetry system and protect from the emergency					K4
5	Evaluate the technologies and model used in the biomedical instrumentation					K5
K1 - Remember; K2 - Understand; K3 - Apply; K4 - Analyze; K5 - Evaluate; K6 - Create						
Unit:1						
Bioelectric Signal Recording			7--hours			
Bioelectric potentials – resting and action potentials – half cell potentials- Surface, needle and micro electrodes, electrical equivalent circuits						
Unit:2						
Physiological Assist Devices			7--hours			
Cardiac pacemakers – natural and artificial pacemakers-pacemaker batteries-defibrillator-A.C./D.C synchronized defibrillator – stimulators – bladder stimulators – heart lung machine various types of oxygenators- kidney machine – hemodialysing units – peritoneal dialysis						
Unit:3						
Clinical and Operation Theater Equipment			7--hours			
Flame photometer – Spectrofluorophotometer – pH meters – Audiometer – Endoscopes – Electromagnetic and laser blood flow meters – ventilators – diathermy units – ultrasonic, microwave diathermy techniques						
Unit:4						
Biotelemetry and Safety Instrumentation			7--hours			
Design of a biotelemetry system, radiotelemetry with subcarrier – multiple channel telemetry systems- problems in implant telemetry – uses of biotelemetry – physiological effects of 50Hz current – microshock and macroshock – electrical accidents in hospitals – devices to protect against electrical hazards.						
Unit:5						
Advances in Biomedical Instrumentation			6--hours			
Computers in medicine, Lasers in medicine, Endoscopes, Cryogenic Surgery, Nuclear imaging techniques, Computer tomography, Thermography, Ultrasonic imaging systems, Magnetic resonance imaging, Digital subtraction angiography, Biomaterial and sensors, Automated drug delivery system.						

<b>Unit:6</b>	<b>Contemporary Issues</b>	<b>2 hours</b>

Course code	13P	RADIATION INSTRUMENTATION LAB	L	T	P	C
Core/Elective/Supportive	Lab		0	0	4	4
Pre-requisite	Atomic and Nuclear Physics- G Level		Syllabus Version		2021-22	

**Course Objectives:**

The main objectives of this course are to:

1. Operate alpha, beta and gamma survey meters and detectors to perform radiation survey and understand its detection mechanism.
2. Find the unknown gamma emitters and alpha emitting isotopes.
3. Acquire skill on using semiconducting components and to study their characteristics for their effective usage in dosimeters internal circuits.

**Expected Course Outcomes:**

On the successful completion of the course, student will be able to:

1	Understand the functioning of GM counter, alpha, beta counting systems, and survey meters.	K2
2	Understand the construction and working of Gamma ray spectrometer and its inbuilt software to identify the unknown gamma emitting isotope.	K2
3	Understand the operation and calibration techniques.	K2
4	Providing feedback for better design, development and integration with the existing technologies.	K5
5	Provide firsthand information for repair and modification.	K6

**K1** - Remember; **K2** - Understand; **K3** - Apply; **K4** - Analyze; **K5** - Evaluate; **K6** - Create

**List of Practical (Any 10)**

1. Measure the energy resolution of the Gamma rayspectrometer.
2. Identify unknown gamma source using the Gamma rayspectrometer.
3. Verification of inverse square law and to find the hidden source using surveymeters.
4. Estimation of efficiency of the alpha countingsystem.
5. Measure the range and energy of beta particles by feather analysis using the GMcounter.
6. Measure the attenuation coefficients of various materials using the GMcounter.
7. Measure HVL of various materials using the GMcounter
8. Find the resolving time of a GMcounter
9. Study the characteristics of a GMtube.
10. NAND and NOR as Universal BuildingBlock
11. OP-Amp amplifications: Adder, Subtractor, Differentiator, Integrator
12. FETCharacteristics
13. A/D and D/Aconvertor
14. IC Regulated powersupply

Course Designed By: **Dr. C. S. Sureka, Dr. S. Vijayakumar & Dr. R. Mohandoss**

Course code	23A	APPLIED ANATOMY AND PHYSIOLOGY	L	T	P	C
Core/Elective/Supportive	Core		4	0	0	4
Pre-requisite	Biology		Syllabus Version		2021- 22	
Course Objectives:						
The main objectives of this course are to:						
1. To study skin, Lymphatic, Bone and muscular systems. To learn about nerves, endocrine, cardiovascular, respiratory and digestive systems.						
2. To identify different organs/structures on plain X-rays, CT-scan and other available imaging modalities. To distinguish normal anatomy from abnormalities and understand tumour pathology and carcinogenesis. To know the importance of Radiation therapy, Surgery, Chemotherapy and Hormone therapy. To understand the basis of immunotherapy and radionuclide therapy for benign and malignant disease.						
3. To identify site specific symptoms in Head and Neck, Breast, Gynecological and Gastro-Intestinal tract. To recall principles of professional practice and medical terminology. To understand ethical and cultural issues, legal aspects and confidentiality.						
Expected Course Outcomes:						
On the successful completion of the course, student will be able to:						
1	Familiar with structure and function of Organs, systems etc.,					K1
2	Common pathology features of cancers and interpretation of clinico pathological data.					K2
3	Understand cancer prevention and public education and early detection and screening.					K2
4	Recollect professional aspects and role of Medical Physicists.					K1
5	Know the management of side effects related to radiation and dose.					K4
K1 - Remember; K2 - Understand; K3 - Apply; K4 - Analyse; K5 - Evaluate; K6 – Create						
Unit:1	Structure & function of organs, systems & their common diseases				10 --hours	
Skin, Lymphatic system, Bone and muscle, Nervous, Endocrine, Cardiovascular, Respiratory, Digestive (Gastro-Intestinal), Urinary, Reproductive, Eye and ear.						
Unit:2	Basic, Radiographic anatomy and tumor pathology				10 --hours	
Anatomy of human body, nomenclature & Surface anatomy, Radiographic Anatomy (including cross sectional anatomy – Identify the different organs/structures on plain x-rays, CT scans and other available imaging modalities. Normal anatomy & deviation for abnormalities. Tumor pathology and carcinogenesis, common pathological features of cancers and interpretation of clinico-pathological data.						
Unit:3	Clinical aspects of Radiation Oncology				8 -hours	
Benign and malignant disease, Spread of malignant disease, Staging and grading systems, Treatment intent - Curative & Palliative, Different modalities of cancer management (e.g. Radiation Therapy, Surgery, Chemotherapy), Hormone Therapy, Immunotherapy, Radionuclide therapy. Patient management on treatment - side effects related to radiation and dose - Acute & Late effects - Monitoring and common management of side effects.						
Unit:4	Site specific signs, symptoms, diagnosis and management				10 -hours	
Head and Neck, Breast, Gynecological, Gastro-Intestinal tract, Genito-Urinary, Lung & Thorax,						

Lymphomas &Leukemias& Other cancers including AIDS related cancers.										
Unit:5		Professional aspects and role of medical physicists						8 -hours		
General patient care - Principles of professional practice – Medical terminology – Research & professional writing – patient privacy – Ethical & cultural issues- Legal aspects – Confidentiality, informed consent, Health and safety.										
Unit:6		Contemporary Issues						2 hours		
<a href="https://www.youtube.com/watch?v=IlcWcuB8VOo">https://www.youtube.com/watch?v=IlcWcuB8VOo</a> <a href="https://www.youtube.com/watch?v=fC4dsZBKvp0">https://www.youtube.com/watch?v=fC4dsZBKvp0</a>

Course code	23B	MEDICAL IMAGING TECHNOLOGY	L	T	P	C
Core/Elective/Supportive	Core		4	0	0	4
Pre-requisite	RadiologicalPhysics		Syllabus version		2021-22	
Course Objectives:						
The main objectives of this course are to:						
1. physical principle and components of Radiography, conventional radiographytechniques						
2. physics of Imagedetectors						
3. computed Tomography(CT), MRI and Ultrasound Imaging and advances in Diagnostic radiology						
Expected Course Outcomes:						
On the successful completion of the course, student will be able to:						
1	Physics principles behind the working of components used in Radiography industry					K1
2	Conventional and digital radiography techniques and its basics					K2
3	The physics and working of Imaging detectors					K2
4	The basic principles and working of CT, MRI and Ultrasound Imaging					K2
5	The recent advances in Diagnostic radiology					K3
K1 - Remember; K2 - Understand; K3 - Apply; K4 - Analyze; K5 - Evaluate; K6 - Create						
Unit:1						
Medical Imaging Fundamentals			8 --hours			
Physical Principle of Diagnostic Radiology- Radiography techniques: objectives of radio-diagnosis, Production of X-rays, Bremsstrahlung- characteristics lines- Interactions of X-rays with human body, differential absorption of X-ray beam, factors affecting image quality- patient dose versus image quality- Prime factors (kVp, mAs and SID/SFD).						
Unit:2						
Physics of Imaging Detectors			10 --hours			
Physics of Imaging Detectors: Physics of generic photon detectors, Quantum efficiency, Direct andIndirectconversiondetectors,PhotomultiplierTube(PMT),Chargecoupleddevice,Flatpanel detector, CR-DR imaging plates, imageintensifier.						
Intensifying screens: Principles and function of intensifying screens conventional screens Vs rare earth screens.						
X-ray beam Filters: inherent and added filters, purpose of added filters, filters used for shaping X-ray spectrum (K-edge filters: holmium, gadolinium, molybdenum)- Heel effect.						
Scatter radiation and grids: Factors influencing scatter radiation, objectives and methods for scatter reduction; beam restrictors (diaphragms, cones/cylinders & collimators), grids.						
Unit:3						
Image Quality			8 --hours			
Limitations of projection imaging technique, Contrast media and projections at different angles - superimposition of overlying structures, spatial frequency, spatial image formation, formation of radiological (latent) image.						
Image quality: sources and reduction of un-sharpness, factors influencing radiographic contrast, resolution,evaluationofresolution-pointspreadfunction(PSF),linespreadfunction(LSF),edge spreadfunction(ESF),modulationtransferfunction(MTF),Signal-to-noiseratio,focalspotsize evaluation- image acquisition.						
Unit:4						
Computed Tomography, MRI and Ultrasound Imaging			10 --hours			
Computed Tomography (CT): Principle, CT imaging system, image reconstruction and						

processing, acquisition and image quality. Magnetic Resonance Imaging (MRI): NMR Principle, techniques involved MR image acquisition and reconstruction, safety and applications of MRI in radiotherapy for treatment planning. Ultrasound imaging(US): construction and working of a transducer, B-mode signal processing, modern imaging methods, image artifacts- US imaging in radiotherapy for treatment planning.										
<b>Unit:5</b>		<b>Advances in Diagnostic radiology</b>							<b>10 --hours</b>	
Digitalradiography:Screenfilmanddigitalmammography,Interventionalradiology-Continuous andpulsedfluoroscopy,digitalsubtractiontechniques,orthopantomography(OPG),ConeBeam CT(CBCT).Digitaldetectors:DualEnergyCT(DECT),Tomosynthesis;detectorsbasedon direct and indirect conversion methods.										
<b>Unit:6</b>		<b>Contemporary Issues</b>							<b>2 hours</b>

Course code	23D	RADIATION STANDARDS	L	T	P	C
Core/Elective/Supportive	Core		4	0	0	4
Pre-requisite	Physics -Graduatelevel		Syllabus version		2021-22	
<b>Course Objectives:</b>						
The main objectives of this course is to:						
1. To understand the traceability of accuracy in dosedelivery						
2. To understand the need for primary and secondary standards for dosemeasurements						
3. To know the developments in the standards for air kerma and absorbed dose towater						
4. To know the standards for brachytherapy, small fielddosimetry						
5. To know the radioactivitystandardization						
6. To know the standards for proton andneutrons.						
<b>Expected Course Outcomes:</b>						
On the successful completion of the course, student will be able to:						
1	Leant about the Radiation standards for photons and electrons					K2
2	Understood the Standardization procedure of brachytherapy sources.					K3
3	Understood standardization procedures involved while using Radionuclides					K2
4	Learnt the working of neutron survey meters.					K3
<b>K1 - Remember; K2 - Understand; K3 - Apply; K4 - Analyze; K5 - Evaluate; K6 – Create</b>						
<b>Unit:1</b>						
<b>Radiation standards for photons and electrons</b>			<b>10--hours</b>			
Need for standards and accuracy in dose measurements Traceability, Uncertainty in measurement, Guide to measurement uncertainty (ISO-GUM), Type A and Type B Standard Uncertainties, , Dosimetric quantities and units, SI units and primary standards for mass, time and length-, Air kerma primary standard- Free-air chambers- Graphite cavity chambers-System of absorbed dose to water standards and their comparison, Graphite and Water Calorimeters as primary standards, Standard for small field dosimetry.						
<b>Unit:2</b>						
<b>Standardization of brachytherapy sources</b>			<b>10--hours</b>			
Apparent activity- Reference Air Kerma Rate- Air Kerma Strength- Standards for HDR <sup>192</sup> Ir and <sup>60</sup> Co sources- Standardization of <sup>125</sup> I and beta sources- Wide angle free air chamber for brachytherapy low energy photon sources, Extrapolation chamber as a primary standard for beta ray sources, - room scatter correction- Development of graphite and water calorimeters for brachytherapy,						
<b>Unit:3</b>						
<b>Standardization of Radionuclides</b>			<b>10--hours</b>			
4π β-γ Coincidence Counting Technique - Standardization of beta and gamma emitters- 4π Large Diameter Proportional Counter- HP Ge Gamma Spectrometer- High Pressure Re—entrant Type Gamma Ion Chamber- Scintillation counting methods for alpha, beta and gamma emitter- liquid scintillation counting- correlation counting- Methods using (n, ∞) and (n, p) reactions - Determination of yield of neutron sources.						
<b>Unit:4</b>						
<b>Neutron and proton Standards</b>			<b>8--hours</b>			
Neutron classification, neutron sources, Neutron standards – primary standards, secondary standards, Neutron yield and fluence rate measurements, Manganese sulphate bath system, precision long counter, Activation method. Neutron spectrometry, threshold detectors & scintillation detectors. Standards for proton beams.						

<b>Unit:5</b>	<b>Neutron Detectors and Dosimeters</b>	<b>8--hours</b>
Neutron dosimetry, Neutron survey meters and their calibration, neutron field survey around high energy medical accelerators/cyclotrons/hadron therapy facilities.		
<b>Unit:6</b>	<b>Contemporary Issues</b>	<b>2 hours</b>
Jan Seuntjens and Simon Duane, Photon absorbed dose standards, <u>Metrologia</u> , Volume 46, <u>Number 2</u> .

Core/Elective/Supportive	Core		4	0	0	4
Pre-requisite	Anatomy and Physiology/ Radiological Physics		Syllabus Version		2021-22	
Course Objectives:						
The main objectives of this course are to:						
1. To study the structure of normal and abnormal cells, organic and inorganic constituents and their metabolic activities.						
2. Understand the effect of radiation at atomic, molecular, organelle, cellular, tissue and organ level and the possible repair mechanisms.						
3. Know about the availability, applicability and limitations of various Radiobiological models that can extend the results obtained from animal experiments and experience gathered from radiation accidents.						
4. To realize the early and late effects of radiation on fetus, individual human beings and our generation too.						
5. To optimize the Radiotherapy plans on biological aspects in order to enhance clinical outcome.						
Expected Course Outcomes:						
On the successful completion of the course, student will be able to:						
1	Understand the structure and behavior of normal and abnormal cells.					K2
2	Learnt the effects of radiation to be cautious while working with radiation.					K2
3	Collected information to overcome Radiophobia and to respect radiation.					K2
4	Learnt to increase the benefits of radiation towards Radiotherapy by reducing its associated risk.					K3
5	Realized the scope for further research in health care to serve human society.					K5
K1 - Remember; K2 - Understand; K3 - Apply; K4 - Analyze; K5 - Evaluate; K6 – Create						
Unit:1						
Cell Biology			8--hours			
Introduction to cell biology- Biochemistry- Structure of the cell- Cellular components: Plasma membrane, Cytoplasm, Nucleus - Interaction of cells with their environment- Cell metabolism- Life cycle of the cell: Cell cycle, Cell division, Cell synchronization- Cellular abnormalities and introduction to cancer..						
Unit:2						
Interaction of Radiation with Cell			8--hours			
Concepts of microdosimetry- Interaction of radiation with biological system- various stages- Interaction of radiation with cell at atomic level- Interaction of radiation with cell at molecular level- Interaction of radiolysis product with biomolecules: Interaction with proteins, carbohydrates and lipids, DNA damage, DNA Repair, Chromosomal and Chromatid aberrations and Dose response relationships- Interaction of radiation at cellular level: Effects of radiation on cell cycle, Mechanisms of Cell Death- Non targeted effects of radiation.						
Unit:3						
Radiobiological Models and Radiation Response Modifiers			10--hours			
Importance of Radiobiological Models- Models based on empirical model: Nominal Standard Dose(NSD)model, Time Dose Fractionation(TDF) factor model- Models based on cell survival curves and isoeffect: Cell survival curve, Random nature of cell killing and poisson statistics: Target theory, Linear Quadratic model, Local effect model- TCP and NTCP based models.						

Radiation response modifiers: Physical factors: Treatment time, Radiation dose response, Fractionation – 4R's of radiobiology, Dose rate effect, Temperature, Linear energy transfer (LET), Relative Biological Effectiveness- Biological factors: Radio sensitivity of tissues, Age- Chemical factors: Impact of molecular oxygen- Oxygen Enhancement Ratio (OER) , Radio sensitizers, Radio protectors and mitigators.		
<b>Unit:4</b>	<b>Biological Effects of Radiation</b>	<b>10--hours</b>
<p>Deterministic effects: Early deterministic effects of radiation, concept of LD<sub>50</sub>/30 and LD<sub>50</sub>/60, Acute radiation syndrome, its stages and general clinical sub-syndromes- Late deterministic effects of radiation: radiation effects on important organs and organ systems, induction of cataract, radiation effects on the developing embryo and shortening of lifespan.</p> <p>Stochastic effects (Carcinogenesis): Experience on radiation carcinogenesis, radiation epidemiology, linear non-threshold hypothesis, DDREF, cancer risk estimation, cancer caused by radiation exposure, second cancers in RT patients, cancer risk from diagnostic radiology, attributable life time risk. Stochastic effects (Genetic effects): Genetic effects of radiation, genetic diseases in humans, genetic risk estimation, background data from humans and other animals.</p>		
<b>Unit:5</b>	<b>Biological Basis of Radiotherapy</b>	<b>10--hours</b>
<p>Radiobiological aspects of modern radiotherapy techniques: Brachytherapy, IMRT, Stereotactic radiotherapy, IORT, Protons, high LET sources and Boron Neutron Capture Therapy (BNCT)- Biological Treatment Planning: Tumor control probability (TCP) and Normal tissue complication probability (NTCP) curves, Nominal Standard Dose (NSD), Biologically Effective Dose (BED) and iso-effect dose calculations, Treatment Gap correction, Effective Uniform Dose (EUD), Limitations of dose-volume-based treatment planning, Uses of biological models in treatment planning, Advantages of biological cost functions over dose-volume cost functions, Precautions for using biological models in plan optimization, quantitative Analysis of Normal Tissue Effects in the Clinic (QUANTEC) and strategies for effective use of biological models in plan optimization.</p>		
<b>Unit:6</b>	<b>Contemporary Issues</b>	<b>2 hours</b>
<p>Expert lectures, online seminars – webinars</p> <p>1. Cell biology - <a href="https://youtu.be/sL3-j79K3u0">https://youtu.be/sL3-j79K3u0</a> (38 Min )</p> <p>2. Course code	23E	QUALITY ASSURANCE FOR DIAGNOSTIC AND THERAPEUTIC EQUIPMENTS	L	T	P	C
Core/Elective/Supportive	Core		4	0	0	4
Pre-requisite	Medical Imaging Technology and External Beam Radiation Therapy		Syllabus Version		2021-22	
Course Objectives:						
The main objectives of this course are to:						
1. learn the Quality assurance procedures in Diagnostic Radiology.						
2. learn the Quality assurance procedures in conventional radiation therapy and TPS.						
3. learn the Quality assurance procedures in advanced radiation therapy and Brachytherapy.						
Expected Course Outcomes:						
On the successful completion of the course, student will be able to:						
1	Perform Quality assurance in Diagnostic Radiology.					K3
2	Perform Quality assurance in conventional radiation therapy.					K3
3	Perform Quality assurance in advanced radiation therapy.					K3
4	Perform Quality assurance in Brachytherapy.					K3
5	Perform Quality assurance in TPS.					K3
K1 - Remember; K2 - Understand; K3 - Apply; K4 - Analyze; K5 - Evaluate; K6 - Create						
Unit:1	Quality assurance in Diagnostic Radiology				10 --hours	
Purpose of QA, QA protocols and procedures, QA test methods for performance evaluation of x-ray diagnostic equipment, QA of mammography, QA of CT equipment, QA of interventional radiology equipment, Dual energy imaging and absorptiometry (DEXA), Patient dose optimization techniques, Dual and Multi-modality Imaging techniques.						
Unit:2	Quality assurance in conventional radiation therapy				10 --hours	
Precision and accuracy in clinical dosimetry-IEC requirements-acceptance, commissioning and quality control of telecobalt, medical linear accelerator, FFF and radiotherapy simulators - Portal and in-vivo dosimetry - electronic portal imaging devices - Patient Specific quality assurance in radiotherapy using EPID.						
Unit:3	Quality assurance in advanced radiation therapy				10 --hours	
Commissioning, QA protocol and procedures, machine and patient specific QA in IMRT, IGRT, SRS, SRT, SBRT, and Cyber knife based therapy.						
Unit:4	Quality assurance in Brachytherapy				8 --hours	
Acceptance, commissioning and quality assurance of remote after loading brachytherapy equipment. ISO requirements and QA of brachytherapy sources- QA & acceptance test proforma of AERB for Brachytherapy units.						
Unit:5	Quality assurance in TPS				8 --hours	
Acceptance, commissioning and quality assurance of radiotherapy treatment planning systems using IAEA TRS 430 and other protocols.

Course code	2EA	NUMERICAL AND COMPUTATIONAL TECHNIQUES.	L	T	P	C
Core/Elective/Supportive		Elective	4	0	0	4
Pre-requisite		Basic mathematics and computer programming	Syllabus Version		2021-22	
Course Objectives:						
The main objectives of this course is to:						
1. Provide the importance of the numerical techniques and solving algebraic, transcendental, and simultaneous equations (both direct and iterative methods).						
2. Study the fitting of straight line, parabola and exponential curve using the principles of least square tool.						
3. Understand the interpolation of equal and difference of independent variables, solve the ordinary and partial differential equations, MATLAB for data files, Objects and images.						
Expected Course Outcomes:						
On the successful completion of the course, student will be able to:						
1	Deduce the solution for various algebraic, transcendental and simultaneous equations using both direct and iterative methods					K3
2	know the curve fitting and interpolation for equal and difference data and how it is used for practical applications					K1
3	identify the techniques for integration and their applications					K2
4	understand the initial and boundary value problems for ordinary and partial differential equations					K2
5	Enhance the problem solving ability using MATLAB and solve the above numerical problem in MATLAB					K3
K1 - Remember; K2 - Understand; K3 - Apply; K4 - Analyze; K5 - Evaluate; K6 - Create						
Unit:1		Roots of equation	10--hours			
Roots of equation: Horner's method, Bisection method – False position method –Newton Raphson method–Simultaneous equation: Gauss elimination method–Inversion of a matrix using Gauss elimination method -Method of triangularization Iterative methods : Gauss Jacobi iteration method – Gauss Seidal iteration method - Relaxation Methods						
Unit:2		Curve fitting and Interpolation	8--hours			
The principles of least squares – Fitting a straight line, Fitting a parabola, Fitting an exponential curve, Sum of the squares of the residuals, Gregory Newton’s forward and backward difference formula for equal intervals – Divided difference – Properties of divided difference – Newton’s divided difference formula – Lagranges interpolation formula for unequal intervals						
Unit:3		Numerical Integration and Eigenvalues	8--hours			
Newton cotes quadrature formula-Trapezoidal rule and error analysis, Simpson’s 1/3rd rule and error analysis - Simpson’s Three-Eight rule, Boole rule, Weddle rule-Power method to find dominant Eigenvalue - Jacobi method – Matrix eigenvalue problem, Eigenvalues of asymmetric tridiagonal matrix – House holder’s method						
Unit:4		Ordinary and Partial differential equation	12--hours			
Ordinary differential equation– Taylor series method – Basic, Improved and Modified Euler methods – RungeKutta IV order method for first order differential equation – RK4 method for						

simultaneous first order differential equations – RK4 method for second order differential equation – Milne’s Predictor – Corrector method. Partial differential equation – difference – quotients – Graphical representation of partial quotients – Classification of Partial differential equations of the second order – Standard five point formula – Diagonal five-point formula – Solution of Laplace’s equation by Liebmann’s iteration		
<b>Unit:5</b>	<b>Mathematical tools</b>	<b>8--hours</b>
The MATLAB environment - Data types, Objects and images, File handling, equation solving. Functions and Programs, Defining Functions Functions as Procedures Repetitive Operations Transformation Rules for Functions, Inverse of matrix, Matrix multiplication, Matrix Determinant.		
<b>Unit:6</b>	<b>Contemporary Issues</b>	<b>2 hours</b>
Expert lectures, online seminars - webinars		
Linear and quadratic spline function, and the finite element method		
	<b>Total Lecture hours</b>	<b>48--hours</b>

Course code	2EB	ADVANCES IN MEDICAL PHYSICS	L	T	P	C
Core/Elective/Supportive	Elective		4	0	0	4
Pre-requisite	Radiation Dosimetry		Syllabus Version		2021-22	
Course Objectives:						
The main objectives of this course are to:						
1. To learn the advances in conventional dosimetry towards Microdosimetry and Nanodosimetry.						
2. To learn the difference between conventional dosimetry and Nanodosimetry and to analyse its various applications.						
3. To realize the importance of Monte Carlo techniques in advanced dosimetry.						
4. To understand the importance of Artificial Intelligence in Medical Physics.						
5. To apply their knowledge towards Industry 4.0/5.0.						
Expected Course Outcomes:						
On the successful completion of the course, student will be able to:						
1	Learnt the possibility to measure radiation at DNA level and the importance of replacing of conventional dosimetric quantities with nanodosimetric quantities.					K2
2	Understand the basics of Micro dosimetry and Nano dosimetry and importance of Nanodosimetry in Oncology.					K2
3	Realize the importance of Monte Carlo techniques in advanced dosimetry.					K2
4	Under the significance of AI in Medical Imaging and Radiotherapy.					K3
5	Apply their Medical Physics knowledge towards Industry 4.0/5.0.					K3
K1 - Remember; K2 - Understand; K3 - Apply; K4 - Analyse; K5 - Evaluate; K6 – Create						
Unit:1						
Microdosimetry			10--hours			
Microdosimetric quantities- solid state based microdosimetric techniques- gas based microdosimetry- Biological effects of microdosimetry, evaluation of Monte Carlo techniques for microdosimetry, microdosimetry in targeted radionuclide therapy and radiotherapy- Cellular dosimetry of targeted radionuclides, Microdosimetry of radon progeny, Dose–response relationship, Micro and nanodosimetric calculations, Relationship of absorbed dose, specific energy and track structures.						
Unit:2						
Nanodosimetry and its Applications			10--hours			
Definition- Nanodosimetric quantities- charge counting Nanodosimetry: electron based nanodosimetry and ion based nanodosimetry- History- evaluation of positive ion detector for nanodosimetry, Biological effects of nanodosimetry, - structure- optimization- current scenario- future developments- Radiation detector- Radiation protection- Radiation biology- Radiation protection- Gamma spectrometry- Gas sensor- Oncology.						
Unit:3						
Artificial Intelligence in Medical Imaging- Introduction			8--hours			
Applying Artificial Intelligence (AI) in Medical Imaging: Computer Aided Detection (CAD), Principles of Computer Aided Image Analysis in Medical Imaging, Machine Learning (ML), and Deep Learning (DL), Content- Based Image Retrieval (CBIR), Radiomics and Radiogenomics- AI in various Medical Imaging Modalities: Limitations of Human Observers, Computer Vision (CV) and AI, Detection of micro calcifications and breast masses, Present Status and Future Directions.						

<b>Unit:4</b>	<b>Artificial Intelligence in CT, MRI, Ultrasound and Nuclear Medicine</b>	<b>8--hours</b>
AI in Computed Tomography: CT Reconstruction Algorithms: From concept to Clinical Necessity, Importance of AI based Detection in CT, Present and Future Developments- AI in Magnetic Resonance Imaging (MRI): Developments of AI in MRI, Future directions- AI in Medical Ultrasound: DL Architectures, Applications of DL in Medical US Image Analysis, Future Perspectives- AI in Nuclear Medicine Imaging: Define a Radiomic Diagnostic Algorithm, Applications of AI in Nuclear Medicine, Future Scenarios- Salient features of AI in Medical Imaging: Opportunities and Applications, Challenges, Pitfalls Guidelines for Success, Regulatory and Ethical Issues.		
<b>Unit:5</b>	<b>Artificial Intelligence in Radiotherapy</b>	<b>10--hours</b>
Importance of Artificial Intelligence (AI) in Radiotherapy- AI Tools for Automated Treatment Planning (ATP): Present ATP Techniques, AI Applications, Advancements and Research guidance in ATP, AI Challenges in ATP- AI in Intensity Modulated Radiotherapy (IMRT), AI for IMRT Dose Estimation, AI for IMRT Planning support, AI for Modelling IMRT Outcome and Plan Deliverability, AI for Auto-segmentation of OAR in IMRT, Future Directions- AI in Brachytherapy: AI in Radiotherapy Quality Assurance: Developments in ML towards Quality Assurance, Applications of ML models for Quality Assurance in Radiotherapy, Quality Assurance of ML Algorithms in Radiotherapy, Challenges Associated with AI for Quality Assurance in RT, Future Directions to Improve AI based Quality Assurance in RT- AI in Radiation Biology- AI in Radiation Protection/ Safety: Motivations to Develop AI based systems for Radiation Protection, Problems Associated with AI based systems for Radiation Protection, Benefits and Future Directions- Radiomics in Radiotherapy: Radiomics Objectives and Workflow, Influence of Radiomics in RT, Challenges for Medical Physicists, Future Directions- AI Considerations for RT Curriculum Development.		
<b>Unit:6</b>	<b>Contemporary Issues</b>	<b>2 hours</b>

Course code	2EC	SOLID STATE PHYSICS	L	T	P	C
Core/Elective/Supportive	Elective		3	0	0	3
Pre-requisite	Solid State Physics -UGlevel		Syllabus version		2021-22	
Course Objectives:						
The main objectives of this course is to:						
1. Understand the principle in the formation of bonding in materials and the structure related aspects of the crystal.						
2. Study the various theories to explain the specific heat and magnetic properties of solids.						
3. Know the implication of band theory in sculpturing the semiconducting properties of solids and, the mechanism of superconductivity and its applications.						
Expected Course Outcomes:						
On the successful completion of the course, student will be able to:						
1	Know the various types of bonding in solids					K1
2	Understand the structural aspects and properties of crystals					K2
3	Understand the thermal behavior and magnetic characteristics of solids					K2
4	Able to analyze the formation of energy bands in solids and semiconducting properties of solids					K4
5	Able to change the band gap of the material					K6
K1 - Remember; K2 - Understand; K3 - Apply; K4 - Analyze; K5 - Evaluate; K6 - Create						
Unit:1	Bonding in Solids				7--hours	
Ionic Bonding; Bond Energy of NaCl, Lattice Energy of Ionic Crystals, Madelung Constant – Properties of Ionic Solids – Co-valent Bond; Saturation, Directional Nature, Hybridization, Properties–Metallic Bond; Properties–Intermolecular Bonds; VanderWaal's bonds, Dispersion Bonds, Dipole Bonds, Hydrogen Bonds						
Unit:2	Crystal Physics				7--hours	
Types of Solids – Lattice, Basis and Crystal Structure – Unit Cells, Lattice Parameters, Primitive Cells – Crystal Systems, Bravais Lattice –Symmetry Elements, Types, Combination–Directions, Planes and Miller Indices – Reciprocal Lattice- X-ray Diffraction, Bragg's Law, Powder Method (Laue's Interpretation).						
Unit:3	Thermal and Magnetic Properties of Solids				7--hours	
Specific Heat – Dulong and Petit Law- Einstein's Theory – Debye's Theory – Magnetism in Solids – Origin of Magnetic Properties of Materials - Bohr Magneton, Orbital, Electron Spin and Nuclear Spin–Types of magnetism; Diamagnetism-Langevin's Theory, Weiss Theory, Paramagnetic Susceptibility – Ferromagnetism, Hysteresis						
Unit:4	Band Theory of Solids				6--hours	
Development of Energy Bands in Solids, Sodium Crystal; an example–Crystal Momentum–Concept of Effective Mass–Concept of Holes–Fermi Level–Effective Density of States and Carrier Concentration – Variation of Carrier Concentration with Temperature – Determination of Band gap of Intrinsic Semiconductors - Hall Effect and its Applications.						

<b>Unit:5</b>	<b>Superconductors</b>	<b>7--hours</b>
Mechanism of Super Conductors – Effect of Magnetic Field – Resistivity – Critical Currents – Meissner Effect – Thermal Properties – Penetration Depth – Type I and Type II Superconductors – London’s Equations – BCS Theory –Josephson’s Effect –Applications; Superconducting Magnets, High Tc Superconductors

Core/Elective/Supportive	Elective		3	0	0	3
Pre-requisite	Radiation Biology		Syllabus version		2021-22	
<b>Course Objectives:</b>						
The main objectives of this course are to:						
1. To know the biomarkers used for biological dosimetry.						
2. To understand the protocol to perform dosimetry using lymphocytes.						
3. To learn the basics of various techniques available to perform biological dosimetry.						
4. To understand the importance cell survival based analysis to measure the biological effects of radiation.						
5. To learn the procedures need to be followed while handling biological samples.						
<b>Expected Course Outcomes:</b>						
On the successful completion of the course, student will be able to:						
1	Leant about the biomarkers used for biological dosimetry.					K2
2	Understand the protocol to perform dosimetry using lymphocytes.					K2
3	Learnt the basics of various techniques available to perform biological dosimetry.					K2
4	Understand the importance cell survival based analysis to measure the biological effects of radiation.					K2
5	Learnt the procedures need to be followed while handling biological samples.					K2
<b>K1</b> - Remember; <b>K2</b> - Understand; <b>K3</b> - Apply; <b>K4</b> - Analyze; <b>K5</b> - Evaluate; <b>K6</b> - Create						
<b>Unit:1</b>						
<b>Biomarkers</b>			<b>6--hours</b>			
Cytogenetic biomarkers- Biomarkers for nucleotide pool damage and DNA damage- Biomarkers for germline inherited mutations and variants- Biomarkers for induced mutations- Biomarkers for transcriptional and translational changes- Others- Safety of laboratory staff..						
<b>Unit:2</b>						
<b>Lymphocyte based Biodosimetry</b>			<b>7--hours</b>			
Phases of biological dosimetry: Sample collection phase, Sample processing phase, Data analysis phase- Radiation Induced Chromosomal Alterations: Radiation induced DNA lesions - Chromosome type aberrations- Unstable aberrations- Stable aberrations- Premature chromosome condensation (PCC).						
<b>Unit:3</b>						
<b>Techniques and Dose Estimation in Biodosimetry</b>			<b>7--hours</b>			
Micronuclei (MN) assay- Protocols advantage and disadvantages - Dicentric Chromosome Aberration (DCA) assay- Protocols, Advantage and disadvantages - Fluorescence In Situ Hybridization (FISH) technique- Comet assay- Polymerization Chain Reaction (PCR) - Flow cytometry- Western blot- Enzyme-linked immunosorbent assay (ELISA) - DNA Microarray technology.						
<b>Unit 4:</b>			<b>Dose Estimation in Biodosimetry</b>			<b>7--hours</b>
Dose Estimation: Cell survival curves – Multi-target single hit model, Linear quadratic Model - Production of an in vitro dose response curve - General Considerations, Physical Considerations, Statistical Considerations- Dose calculation in biological dosimetry- Choice of curves- Number of cells to be analysed - Uncertainty on dose estimates- Dose Assessment - Acute whole body exposure, low dose over exposure cases, Partial body exposure, After delayed blood sampling, After protracted and fractionated exposure.						

Unit:5	Emergencies and New Developments in Biodosimetry	7--hours
Automation of chromosomal assays - Automated Sample Processing, Automated Image Analysis, Laboratory Information Management System (LIMS) – Investigation of radiation accidents - Chernobyl, The Istanbul accident - Mass Casualty Events - Potential Radiation Exposure, Historical Experience, Role of Biological Dosimetry - Existing Mass Casualty Strategies.		
Unit:6	Contemporary Issues	2 hours
Expert lectures, online seminars – webinars 1. Biomarkers - <a href="https://youtu.be/CUI7Ncgq92o">https://youtu.be/CUI7Ncgq92o</a> (9 Min) 2. Relative biological effectiveness (RBE) - <a href="https://youtu.be/6dsqXsKQrv4">https://youtu.be/6dsqXsKQrv4</a> (6 Min) 3. Biological & physical effects of radiation (Dosimetry) - <a href="https://youtu.be/7I9s4-lhHH4">https://youtu.be/7I9s4-lhHH4</a> 4. Internal Radiation Dosimetry - <a href="https://youtu.be/cofx0FyjfCI">https://youtu.be/cofx0FyjfCI</a> (16 Min) <a href="https://youtu.be/uvm0Ile6D64">https://youtu.be/uvm0Ile6D64</a> (8 Min) 5. Radiopharmaceutical Dosimetry - <a href="https://youtu.be/5XMcDVRqS44">https://youtu.be/5XMcDVRqS44</a> (32 Min) 6. Polymerase Chain Reaction (PCR) - <a href="https://youtu.be/uKeMiAZ8Zu4">https://youtu.be/uKeMiAZ8Zu4</a> (11 Min) 7. Radiation induced chromosomal aberration - <a href="https://youtu.be/9arp4AGzCSc">https://youtu.be/9arp4AGzCSc</a> (49 Min)		
	Total Lecture hours	36--hours
Text Book(s)		
1	C. S. Sureka and C. Armpilia Text book on “Radiation biology for Medical Physicists”, CRC Taylor & Francis Group, USA, 2017.	
2	Cytogenetic Dosimetry: Applications in Preparedness for and Response to Radiation Emergencies, IAEA, 2011.

Course code	23P	MEDICAL PHYSICS LAB I	L	T	P	C
Core/Elective/Supportive	Lab		0	0	3	3
Pre-requisite	External Beam Radiation Therapy		Syllabus Version		2021-22	
Course Objectives:						
The main objectives of this course are to:						
1. To determine HVL of Radiographyunit.						
2. Perform Quality Assurance of a Radiographyunit.						
3. To create manual treatment plans using isodosecharts.						
Expected Course Outcomes:						
On the successful completion of the course, student will be able to:						
1	Apply their knowledge on measurements of factors covering penetration of X-ray to various materials.					K3
2	Measure and verify treatment planning parameters.					K4
3	Perform quality assurance tests of radiation generating equipment like Radiography.					K3
4	Evaluate a treatment plan for single and parallel opposed fields.					K5
5	Perform in-vivo dosimetry.					K4
K1 - Remember; K2 - Understand; K3 - Apply; K4 - Analyze; K5 - Evaluate; K6 - Create						
Practicals						
1. Attenuation of Xrays through various materials and evaluation ofHVL.						
2. Quality assurance inRadiography.						
3. Radiation survey inRadiography.						
4. Calibration of radio chromic film and find the unknowndose.						
5. Calibrate the Optical Stimulated Luminance Dosimeter (OSLD) and findthe unknowndose.						
6. Manual Treatment Planning of Singlefields.						
7. Manual Treatment Planning of Parallel Opposedfields.						
8. Manual Treatment Planning of Obliquefields.						
9. Manual Treatment Planning of Wedgefields.						
10. Monitor unit calculations of simple and complex treatmentplans.						
11. Treatment time calculation of simple and complex treatmentplans.						
Demonstrations						
12. Immobilization and CTSimulation						
13. Contouring and external beam treatment planning (simplecases)						
14. Mould roomtechniques						
15. Contouring and brachytherapyplanning.

# **Third Semester**

Course code	33A	RADIATION DOSIMETRY AND CALIBRATION	L	T	P	C
Core/Elective/Supportive	Core		5	0	0	4
Pre-requisite	Physics -Graduatelevel		Syllabus version	2021-22		
Course Objectives:						
The main objectives of this course is to:						
1. To learn about ionization chamber theory-design of free air ion chamber, design of parallel plate (FAIC), measurements of Air kerma / Exposure – IAEA TRS-277protocol						
2. To understand the measurements of $D_w$ for external beams- IAEA TRS 398 - Referencedosimetry for X-rays, Co-60 photons, high energy photons, electrons andprotons.						
3. To understand the problems with small field and non standard field dosimetry- choice of appropriate dosimeter- IAEA TRS 483 protocol.						
4. To be able to understand standardization of beta emitters and electron capturewith proportional GM and Scintillationcounters.						
5. To learn routine sample measurement with liquid counter and scintillation countingmethods for alpha, beta and gammaemitters.						
Expected Course Outcomes:						
On the successful completion of the course, student will be able to:						
1	apply IAEA – TRS 398 protocols in clinical procedure					K2
2	calibrate small and non-standard field dosimetry and protection level monitors					K2
3	calibrate photons from Co 60 beams, photons and electrons from linacs					K3
4	do Brachytherapy dosimetry using various protocols					K3
5	neutron emitted from medical linear accelerator					K5
K1 - Remember; K2 - Understand; K3 - Apply; K4 - Analyze; K5 - Evaluate; K6 - Create						
Unit:1	Ionization chamber theory				15--hours	
Bragg-Gray theory, Mathematical expression describing Bragg-Gray principle and its derivation. Charged particle equilibrium. Burlin and Spencer Attix Cavity theories. Restricted stopping power ratios.Transient Charged Particle Equilibrium (TCPE), Concept of Dgas, Cavity ion chambers, Derivation of an expression for sensitivity of a cavity ion chamber- Type of ion chambers. Build-up cap and water proof sleeves..						
Unit:2	Calibration of ion chambers				15--hours	
General definition of calibration factors - $N_X$ , $N_K$ , $N_D$ , $N_{D, air}$ , $N_D$ , $w$ . Various steps to arrive at the expression for absorbed dose to water –Determination of absorbed dose to water ( $D_w$ ) due to photon, electron and heavy charged particles (proton, carbon ion etc..) using current IAEA protocols( TRS 398, TG 51, TG70 etc)-TPR $_{20,10}$ measurements for beam quality in linacphotons- $k_Q$ factors derivation-Reference conditions for measurement, correction factors used - Phantom, Water proof sleeve, Derivation of an expression for machine timer error (for telecobalt unit and brachytherapy units), Temperature and pressure correction, Saturation correction (Ksat), .Parallel plate, cylindrical and spherical ion chambers, Two voltage method for continuous and pulsed beams, Polarity correction. Concept of cross calibration.						

<b>Unit:3</b>	<b>Calibrations for small and non-standard field dosimetry</b>	<b>10--hours</b>
Calibration of small and non-standard field dosimetry. IAEA TRS- 483 and Alphonso formalism. Small field dosimetry– Physics, fundamental aspects, protocols, small-field radiotherapy equipment and techniques. Dosimetry challenges in small fields. Dosimeters available for small field measurements. Calibration for tomotherapy beams.		
<b>Unit:4</b>	<b>Calibrations for protection level monitors</b>	<b>8--hours</b>
Calibration of protection level instruments and monitors used in radiotherapy (such as Survey Meters, gamma zone monitor, neutron survey meter, personnel monitoring- Quality Audit Programmes (TLD inter-comparison etc.).		
<b>Unit:5</b>	<b>Brachytherapy dosimetry</b>	<b>10--hours</b>
Manchester, Paris and Stockholm systems (Intracavitary, interstitial, and surface moulds as applicable)- Paterson Parker tables- ICRU 38 and 58 protocols. Specification and calibration of brachytherapy sources - RAKR and AKS - IAEA TECDOC 1274 and ICRU 72 recommendations- Point and line source dosimetry formalisms - Sievert Integral - AAPM TG43/43U1 and other dosimetry formalisms. Graphite and water calorimeters for brachytherapy. Interpolation method for calibration of HDR Ir-192 sources.		
<b>Unit:6</b>	<b>Simulation of Linac calibrations</b>	<b>2 -- hours</b>
Demonstration of simulated calibration of linac beams with IAEA TRS 398		
	<b>Total Lecture hours</b>	<b>60--hours</b>
<b>Text Book(s)</b>

treatment and dosimetry - intraoperative electron radiotherapy (IORT)for breast cancer- mobile linac. Principle, applications of proton therapy in radiation oncology, National/International/ IEC requirements for hadron therapy equipment, treatment planning and delivery, proton therapy treatment planning and delivery, beam modifiers safety interlocks for gammaandneutronradiations,inducedactivityanditsminimization,Prescribing,Recordingand ReportingProtonBeamTherapy(ICRUReport78),Carboniontherapy–physicalandbiological considerations. Radio immunotherapy. In-vivo dosimetry for patientprotection.		
<b>Unit:4</b>	<b>Special techniques in Brachytherapy</b>	<b>10--hours</b>
Integrated brachytherapy unit. Brachytherapy treatment planning - CT/MR based brachytherapy planning-forwardandinverseplanning-DICOMimageimport/exportfromOT-Record& verification.BrachytherapytreatmentforProstatecancer.Ocularbrachytherapyusingphotonand betasources.Intravascularbrachytherapy-classification-sources-dosimetryprocedures- AAPM TG 60 protocol. Electronic brachytherapy (Axxent, Mammosite, etc.). Brachytherapy for breast cancer with I-125 seeds,		
<b>Unit:5</b>	<b>Information Technology for Medical Physics</b>	<b>8--hours</b>
International standards (IEC, DICOM, IHE), General concepts and architecture of HIS/RIS/PACS, Radiotherapy record and verify systems, DICOM objects for patient dosimetry.		
<b>Unit:6</b>	<b>Contemporary Issues</b>	<b>2 -- hours</b>

<div><div></div><div></div><div></div><div></div><div></div></div> <div><div></div><div></div><div></div><div></div><div></div></div> <div><div></div><div></div><div></div><div></div></div>						

<b>Unit:3</b>	<b>Planning of Radiotherapy Installations</b>	<b>14--hours</b>
Planning of medical radiation installations - General considerations - Radiotherapy(telegamma, accelerator, tomotherapy, and cyberknife). Definitions of primary, secondary barriers, restricted area, controlled area. work load, use factor- Siting, layout planning and shielding calculations for hadron therapy facilities; neutron yield and aspects for neutron shielding. Planningand shielding calculations of brachytherapy facilities. Regulatory requirements for brachytherapy facilities.		
<b>Unit:4</b>	<b>Planning of Radio diagnostic and Nuclear medicine facility</b>	<b>14--hours</b>
Planning and shielding calculations of diagnostic radiology facilities. Regulatory requirements for diagnostic radiology facilities. Planning and Shielding Calculations during the installation of Nuclear Medicine facilities and researchlaboratoriesusingradioisotopeslikeSPECT,PET/CT,HighDoseTherapyintheNuclear Medicine Department as per National/Internationalmethods.		
<b>Unit:5</b>	<b>Safety in Nuclear Medicine</b>	<b>10--hours</b>
Performance check of radiation measuring and monitoring instruments, work place and environmental(stack) monitoring, Permissible radiation limits for controlled and supervised area, Contamination limits, Radiation protection survey and contamination checks, Air-borne contamination, estimation of gases effluent discharge, dose apportionment and dose budgeting. Radiological safety aspects during servicing and maintenance. Unusual occurrences and its handling procedures: Failure of cooling system, target foil ruptured, spillage, power failure, excessive exposure, personnel contamination; Protective and Emergency equipment requirements in medical cyclotron facility.		
<b>Unit:6</b>	<b>Contemporary Issues</b>	<b>2 -- hours</b>
1. AAPM [American Association of Physicists in Medicine] Task Group 204. 2011. Size-Specific Dose Estimates (SSDE) in pediatric and adult body CT exams. 2. Amis E. S. Jr., Butler P. F. “American College of Radiology white paper on radiation dose in medicine.” J Am CollRadiol. 2007;4(5):272–284.

Course code	33D	RADIATION HAZARDS EVALUATION AND CONTROL	L	T	P	C
Core/Elective/Supportive	Core		5	0	0	4
Pre-requisite	Physics - Graduate level		Syllabus Version		2021-22	
Course Objectives:						
The main objectives of this course is to:						
1. Radiation Hazard Evaluation in Medical Radiation Installations.						
2. Radioactive Waste Disposal						
3. Transport of Radioactive Material						
4. Legislation						
5. Radiation Emergencies and their Medical Management						
Expected Course Outcomes:						
On the successful completion of the course, student will be able to:						
1	Exposed to radiation hazards in medical diagnostic and therapeutic equipment and installations.					K2
2	Exposed to Radioactive wastes and its sources, types and disposal					K3
3	Learned the Transportation of radioactive substances and its safe handling					K3
4	Exposed to National legislation and Regulatory framework					K2
5	Learning Normal and potential exposure, potential accident situations involving radioisotopes					K2
K1 - Remember; K2 - Understand; K3 - Apply; K4 - Analyze; K5 - Evaluate; K6 - Create						
Unit:1						
Radiation Hazard Evaluation in Medical Radiation Installations			14--hours			
Evaluation of radiation hazards in medical diagnostic and therapeutic equipment and installations. Radiation monitoring procedures – measurement of leakage radiation through the treatment head/ X-ray tube housing. Radiation survey and evaluation of radiation levels around RT, NM and DR installation. Protective measures to reduce radiation exposure to staff and patients- Radiation hazards in brachytherapy departments and teletherapy departments and radioisotope laboratories- Particle accelerators - Protective equipment - Handling of patients - Waste disposal facilities - Radiation safety during source transfer operations - Special safety features in accelerators. Head leakage and Neutron measurements in linacs. Contamination control in NM.						
Unit:2						
Radioactive Waste Disposal			10--hours			
Radioactive wastes – sources of radioactive wastes – generation- Classification of waste - Treatment techniques for solid, liquid and gaseous effluents – Permissible limits for disposal of waste - Sampling techniques for air, water and solids – Geological, hydrological and meteorological parameters – Ecological considerations. Disposal of radioactive wastes - General methods of disposal - Management of radioactive waste in medical, industrial, agricultural and research establishments. Waste disposal in NM- Disposal of excreta and urine from patients administered high doses of radioisotopes.						
Unit:3						
Transport of Radioactive Material			10--hours			
Transportation of radioactive substances - Historical background - General packing requirements- Transport documents- Labeling and marking of packages- Type A and Type B packages- Transport index- Regulations applicable for different modes of transport - Transport						

by post - Transport emergencies - Special requirements for transport of large radioactive sources and fissile materials - Exemptions from regulations – Shipment approval – Shipment under exclusive use – Transport under special arrangement – Consignor's and carrier's responsibilities, RSO responsibilities with damaged package-radiation monitoring of packages		
<b>Unit:4</b>	<b>Legislation</b>	<b>10--hours</b>
Physical protection of sources - Safety and security of sources during storage, use, transport and disposal–Securityprovisions:administrative and technical–Security threat and graded approach in security provision. National legislation – Regulatory framework – Atomic Energy Act – Atomic Energy (Radiation Protection) Rules – Applicable Safety Codes, Standards, Guides and Manuals – Regulatory Control – Licensing, eLora-Inspection and Enforcement – Responsibilities of Employers, Licensees, Radiological Safety Officers and Radiation Workers – National inventories of radiation sources– Import, Export procedures guidelines, requirement and procedures for setting up medical radiation facilities, Cyclotron facilities, Emergency preparedness in medical radiation/cyclotron facilities.		
<b>Unit:5</b>	<b>Radiation Emergencies and their Medical Management</b>	<b>14--hours</b>
Normal and potential exposure, potential accident situations involving radioisotopes, elements of emergency planning and preparedness including procedures for notification and communication, administrative and technical procedures, responsibilities of employer, licensee, RSO, Service Engineer and source/equipment supplier in case of emergency, availability of devices for handling emergency and display of procedure to be followed-preparation of emergency action plan-probable emergency situations and accidents in medical applications of radiation (failure of pneumatic system, improper functioning of timer, software mix-up in accelerator etc.)- probable accidents during Loading and unloading of sources - Loss of radiation sources and their tracing - Typical accident cases in radiotherapy with Case histories Radiation injuries in Radiotherapy and Interventional Radiology procedures, mis-administration of radio isotopes in NM, treatment and medical management of affected patients– Personal (external and internal) and environmental dosimetry in accidental exposures-Investigation of accidental exposure to patients or excessive exposure to occupational radiation workers, Emergency preparedness plan, Radiation protection programme - design, implementation and management.

Course code	33E	NUCLEAR MEDICINE	L	T	P	C
Core/Elective/Supportive	Core		5	0	0	4
Pre-requisite	Atomic and Nuclear Physics/ Radiological Physics		Syllabus version		2021-22	
Course Objectives:						
The main objectives of this course are to:						
1. To study the production of radionuclides used in nuclear medicine and types of production. To learn different types of imaging procedures namely In-vivo and In-vitro studies.						
2. To understand the importance various imaging instruments and their operating principles and to be familiar with various imaging systems and their limitation.						
3. To recall different imaging techniques like two dimensional and three dimensional techniques. To be able to understand focal plane tomography emission computed tomography, etc.						
4. To narrate Annihilation Coincidence Detection and PET detector scanner design, data Acquisition for PET. To relate working of Medical cyclotron, radioisotopes produced and their characteristics.						
Expected Course Outcomes:						
On the successful completion of the course, student will be able to:						
1	Familiar radioisotopes being used in different In-vitro and in-vivo studies.					K2
2	Know various types of collimator and their uses for various studies.					K2
3	Learn parameters affecting spatial resolution and methods of evaluation of spatial resolution.					K2
4	Learnt the various Nuclear Medicine modalities for molecular imaging.					K3
5	Understand the therapeutic applications of unsealed radioisotopes.					K3
K1 - Remember; K2 - Understand; K3 - Apply; K4 - Analyze; K5 - Evaluate; K6 - Create						
Unit:1	Physics of Nuclear Medicine				10--hours	
Introduction to Nuclear Medicine, Unsealed Sources, Production of Radionuclide used in Nuclear Medicine; Reactor and accelerator based Radionuclides, Photonuclear activation, Equations for Radionuclide Production, Radionuclide Generators and their operation principles-Preparation and Various usages of Radiopharmaceuticals. In-vivo Non-imaging procedures; Thyroid Uptake Measurements, Renogram, Life Span of RBC, Blood Volume studies etc.						
Unit:2	Radionuclide Imaging				10--hours	
General concept of Radionuclide Imaging and Historical developments. The Rectilinear Scanner and its operational principle, Basic Principles and Design of the Gamma Camera / Scintillation Camera, System components, Detector System and Electronics, Different types of Collimators, Design and Performance Characteristics of the Converging, Diverging and Pin hole Collimator, Image Display and Recording Systems, Digital Image Processing Systems, Scanning Camera, Limitation of the Detector System and Electronics.						
Unit:3	Imaging Techniques and Image Quality Parameters				14--hours	
Basic Principles, Two dimensional Imaging Techniques, Three Dimensional Imaging Techniques - Basic Principles and Problem, Focal Plane Tomography. Physics of Imaging system (PET/SPECT): Principles of PET/SPECT, PET Instrumentations, Annihilation Coincidence Detection, PET Detector and Scanner Design, Data Acquisition for PET, Data corrections and Quantitative Aspect of PET. Fusion imaging PET-CT, PET-MRI.						

<b>Unit:4</b>	<b>Image Reconstruction and Image Quality Parameters</b>	<b>14--hours</b>
Various Image Reconstruction Techniques during Image formation such as Back Projection and Fourier based Techniques, Iterative Reconstruction method and their drawbacks. Attenuation Correction, Scatter Correction, Resolution Correction, Other requirements or Sources of Error. Spatial Resolution, Factor affecting Spatial Resolution, Methods of Evaluation of Spatial Resolution, Contrast, Noise. National and International protocol followed for Quality Assurance / Quality Control of Imaging equipment (SPECT, PET-CT and SPECT- CT) - IEC/NEMA Protocols.		
<b>Unit:5</b>	<b>Radionuclide Therapy</b>	<b>10--hours</b>
Treatment of Thyrotoxicosis, Thyroid cancer with I-131, use of P-32 and Y-90 for palliative treatment, Radiation Synovectomy and the isotopes- Delay Tank - waste Disposal Methods used in Nuclear Medicine.		
<b>Unit:6</b>	<b>Contemporary Issues</b>	<b>2 hours</b>
Expert lectures, online seminars – webinars Physics of Nuclear medicine - <a href="https://youtu.be/WgCkrfOXLoY">https://youtu.be/WgCkrfOXLoY</a> (34 Min) 2. RadionuclideImaging - <a href="https://youtu.be/wAiCm1du0h4">https://youtu.be/wAiCm1du0h4</a> ( 44Min) 3. Imaging Techniques and image quality parameters- <a href="https://youtu.be/KuVpYz9eEZc">https://youtu.be/KuVpYz9eEZc</a> (1 Min 30 Sec) <a href="https://youtu.be/yQQxkKazlsA">https://youtu.be/yQQxkKazlsA</a> (3 Min) <a href="https://youtu.be/wx2zyfgYZrE">https://youtu.be/wx2zyfgYZrE</a> (4Min) <a href="https://youtu.be/m7gzIcRhv88">https://youtu.be/m7gzIcRhv88</a> (17Min) 4. Filtered Back projection in SPECT - <a href="https://youtu.be/MTBhqcVjQ8Q">https://youtu.be/MTBhqcVjQ8Q</a> (1Min) 5. Radionuclide Therapy - <a href="https://youtu.be/9mDjSDXSCgI">https://youtu.be/9mDjSDXSCgI</a> (58Min)

Course code	33F	ADVANCED RADIATION DOSIMETRY	L	T	P	C
Core/Elective/Supportive		Core	5	0	0	4
Pre-requisite		Radiation Dosimetry and Calibration, External Beam Radiation Therapy and Brachytherapy	Syllabus Version		2021- 22	
Course Objectives:						
The main objectives of this course are to:						
1. Radiation Chemistry and Chemical Dosimetry Internal Radiation Dosimetry						
2. Techniques for Dose calculations						
3. Computers in Treatment Planning and Monte Carlo aided dosimetry						
Expected Course Outcomes:						
On the successful completion of the course, student will be able to:						
1	narrate introduction to Chemistry of Dosimetry					K1
2	principles and techniques in Internal Radiation Dosimetry.					K2
3	techniques involved in internal dose calculations.					K3
4	understood the basics behind Monte Carlo aided dosimetry.					K2
5	learnt the application of Computers in Treatment Planning.					K4
K1 - Remember; K2 - Understand; K3 - Apply; K4 - Analyze; K5 - Evaluate; K6 - Create						
Unit:1						
Radiation Chemistry and Chemical Dosimetry			10 --hours			
Definitions of free radicals and G-value - Kinetics of radiation chemical transformations - LET and dose-rate effects - Radiation Chemistry of water and aqueous solutions, peroxy radicals, pH effects - Radiation polymerisation, effects of radiation on polymers in dosimetry - Formation of free radicals in solids.						
Chemical Dosimetry Principles- Definitions of optical density, molar absorption coefficient, Beer-Lambert's law, spectrophotometry - dose estimation techniques - Requirements for an ideal chemical dosimeter Fricke dosimeter - FBX dosimeter - Free radical dosimeter - Ceric sulphate dosimeter - Applications of chemical dosimeters in Radiotherapy.						
Unit:2						
Internal Radiation Dosimetry			14 --hours			
In-vitro Technique: RIA/IRMA techniques and its principles.						
Internal Radiation Dosimetry: Different Compartmental Model; Single Compartmental Model, Two Compartmental Model with and without Back Transference- Classical Methods of Dose Evaluation- Beta particle Dosimetry- Equilibrium Dose Rate Equation, Beta Dose Calculation Specific Gamma Ray Constant, Gamma Ray Dosimetry, Geometrical Factor Calculation, Dosimetry of Low Energy Electromagnetic Radiation.						
Unit:3						
MIRD Technique for Dose calculations			10 --hours			
Basic procedure and some practical problems, Cumulative Activity, Equilibrium Dose Constant, Absorbed Fraction, Specific Absorbed Fraction, Dose Reciprocity Theorem, Mean Dose per unit Cumulative Activity and Problems related to the Dose Calculations. Limitation of MIRD Technique.						

<b>Unit:4</b>	<b>Monte Carlo aided dosimetry</b>	<b>10 --hours</b>
Random variables, discrete random variables, continuous random variables, Probability density functions, discrete probability density function, continuous probability distributions, cumulative distribution function, accuracy and precision, central limit theorem, random numbers and their generation, tests for randomness, inversion random sampling technique including worked examples, integration of simple 1-D integrals including worked examples. Overview of computational codes used in medical physics such as MCNP, Fluka, Geant 4, BEAMnrc etc.		
<b>Unit:5</b>	<b>Computers in Treatment Planning</b>	<b>14 --hours</b>
Scope of computers in radiation treatment planning - Review of algorithms used for treatment planning computations - Pencil beam, double pencil beam, Clarkson method, convolution superposition, lung interface algorithm, fast Fourier transform, Inverse planning algorithm, Monte Carlo based algorithms. Treatment planning calculations for photon beam, electron beam, hadron beam (proton/heavy ion) beam and brachytherapy - Factors to be incorporated in computational algorithms. Plan optimization - direct aperture optimization - beamlet optimization - simulated annealing - dose volume histograms - Indices used for plan comparisons - Hardware and software requirements - beam & source library generation. Networking, DICOM and PACS.		
<b>Unit:6</b>	<b>Contemporary Issues</b>	<b>2 hours</b>

10. Quality Assurance of Multileaf Collimator
11. Quality Assurance of a Brachytherapy unit
12. Pretreatment IMRT Quality Assurance
13. Radiation Protection survey of Teletherapy and Brachytherapy installations
14. Quality Assurance of a Linear Accelerator
15. Manual planning of three and four field techniques
16. Autoradiography test for Brachytherapy source in Remote Afterloader unit

#### Demonstrations

17. Image guidance radiation therapy (planar and CBCT)
18. Respiratory gating techniques
19. Demonstration of array detector

Course Designed By: **Dr. C. S. Sureka**

**Note: These experiments may also be performed during the third semester. However, its examination will only be conducted during the fourth semester.**

Course code	47V	PROJECT	L	T	P	C
			0	0	10	8
Pre-requisite	External Beam Radiation Therapy/ Diagnostic Radiology/ Nuclear Medicine		Syllabus Version		2021- 22	
Course Objectives:						
The main objectives of this course are to:						
1. To have working knowledge of the clinical diagnostic imaging and/or radiation oncology. To get hands on training with relevant instrumentation						
2. To be familiar with radiation safety practices and procedures including the determination of radiation shielding requirements.						
3. Practical real time exposure to understand the biological effects of radiation and its application for radiation safety and for radiation treatment.						
4. To comply with all applicable regulations and requirements regarding health and safety of self and of others, and of clinical and research ethics and procedures.						
5. Understanding of frontier research and to distinguish the suitable methodology for systematic analysis.						
Expected Course Outcomes:						
On the successful completion of the course, student will be able to:						
1	Learnt various diagnostic/therapeutic instrumentation and methodology to carry out Radio therapy.					K3
2	Exposed to various methods and precautions needed for their professional life as Medical Physicist.					K3
3	Applied effective communication both orally and in writing.					K3
4	Understand frontier research and systematic analysis.					K2
5	Completed mini research projects.					K6
K1 - Remember; K2 - Understand; K3 - Apply; K4 - Analyze; K5 - Evaluate; K6 – Create						
Students are encouraged to spend 30 days for carrying out the project work under the guidance and supervision of Medical Physicists/Scientists in leading research Hospitals/Institutes/Health Care Industries/ Universities engaged with cancer therapy/research..

# **Value Added Course**

## VALUE ADDED COURSE I

<b>Name of the Course</b>	Yoga for Interpersonal Skills
<b>Credit criteria</b>	2 credits
<b>Objective</b>	To ensure physical health, strengthen the interpersonal skills for self-realization and identifying the hidden superior qualities through the introspection methods in yoga
<b>Teaching hours</b>	30 hours + 1 day tour to Aliyar/ Esha Yoga Center
<b>Preferred time</b>	First Semester
<b>Participants</b>	Interested I and II M.Sc. students
<b>Mode of Lecture</b>	Either through online or conventional teaching
<b>No. of participants</b>	~ 25
<b>Resource persons</b>	Professors, well qualified and experienced yoga instructors from all over the country as well as Temple of Consciousness, Aliyar/ Isha Yoga Center
<b>Course Syllabus</b>	<p><b>Unit I: Yoga and Meditation (10h)</b></p> <p>Yoga: Definition and its classifications – Astanga Yoga - Sun salutation(SuryaNamaskar)–Practicing procedure and benefits– Hatha Yoga: (a) sitting pose: Padmasan, Vajrasan, Pachimothasan, Yoga mudra, (b) Standing pose: Viruchasan, Thadasana, Padhahastasan, (c) Lying pose: Bujangasan, Dhanurasan, Navasan, Navukasan. Pranayamam: procedures and benefits – Nadisudhi, Seetali, Seethkari, Surya bedhana, Chandra bedhana, Kabalapathi, Brahmamari. Mudras: Gyana mudra, Surya mudra, Abaana mudra, Soonya mudra, Linga mudra, Aathi mudra, Vayu mudra, Varuna mudra. Meditation: Importance and benefits – Chakras and its explanations - Types of meditation – Agna, Shanthi, Thuriya and Thuriyatheetha.</p> <p><b>Unit II: Introspection for interpersonal skill development (10h)</b></p> <p>Introspection: Importance and procedures – Levels of Introspection: (i) analysis of thought (ii) Moralization of desire (iii)</p>

	<p>Neutralization of anger (iv) Eradication of worries – Harmonious relationship with fellow beings. Attaining five great qualities: (i) Perspicacity (ii) Acceptability (iii) Adaptability (iv) Magnanimity (v) Creativity - Five kinds of duty: Importance – Duties to self, family, relatives, society and world. Interpersonal skill – Importance – Communication skill, Emotional intelligence, Team working, Negotiations, conflict resolution, problem solving and decisionmaking.</p> <p><b>References:</b></p> <ol style="list-style-type: none"> <li>1. Yogasana, WCSC-VISION for Wisdom, 2012, Vethathiri publications,Erode.</li> <li>2. Yoga for Modern Age, Vethathiri Maharishi, 2017, Vethathiri publications,Erode.</li> <li>3. HowtoWinFriendsandInfluencePeoplebyDaleCarnegie, 1998, Gallerybooks.</li> </ol>
<b>Registration</b>	Free. Either through WhatsApp or using their Email id.
<b>Certification</b>	E-certificate will be issued to active participants after completing the examination.
<b>Examination</b>	Conducted by the Course coordinator for 50 Marks.
<b>Course Materials</b>	PPTs provided by resource persons will be shared.
<b>Outcome</b>	Physical and psychologically strengthen personality with successful career growth.
<b>Course Coordinators</b>	Dr. C. S. Sureka and Dr. R. Mohandoss

## VALUE ADDED COURSE II

<b>Name of the Course</b>	Medical Radiological Safety Officer (MRSO) Training
<b>Credit criteria</b>	2 credits
<b>Objective</b>	To strengthen the knowledge of budding Medical Physicists and help them to clear MRSO examination conducted by Atomic Energy Regulatory Board (AERB), Mumbai.
<b>Teaching hours</b>	30 hours (25 hours lecture + 5 hours virtual tour)
<b>Preferred time</b>	Fourth Semester
<b>Eligibility</b>	Students who are perusing I and II M.Sc Medical Physics, Diploma in Radiological Physics, undergoing internship program and Junior Medical Physicists from all over the country.
<b>Mode of Lecture</b>	Online presentation.
<b>Maximum number of participants</b>	250
<b>Resource persons</b>	Scientists, Professors and Eminent Medical Physicists from all over the country as well as Alumni of Bharathiar University.
<b>Course Syllabus</b>	Syllabus recommended by AERB for MRSO certification.
<b>Attendance</b>	via Google Attendance
<b>Registration</b>	Free. Either through WhatsApp or using their Email id.
<b>Certification</b>	E-certificate will be issued to active participants who can successfully complete their examination.
<b>Examination</b>	Online examination will be conducted by the Course coordinator for 50 Marks.
<b>Course Materials</b>	PPTs provided by resource persons will be shared.
<b>Outcome</b>	Increases in the MRSO pass percentage.
<b>Course Coordinator</b>	Dr. C. S. Sureka

# **Supportive Course**

Course code	GS121	DIAGNOSTIC RADIOLOGY	L	T	P	C
Core/Elective/Supportive		Supportive	2	0	0	2
Pre-requisite		Physics and Biology	Syllabus revision		2021-22	
Course Objectives:						
The main objectives of this course are to:						
1. Learn the basics of radiation used for cancer diagnosis and treatment.						
2. Understand the difference among radiations used for various applications.						
3. Learn the causes of cancer and possible diagnostic modalities.						
Expected Course Outcomes:						
On the successful completion of the course, student will be able to:						
1	Gained knowledge about ionizing and non-ionizing radiations.					K2
2	Learnt the basics of cancer.					K2
3	Understood the basic principles of radiology.					K3
4	Gained knowledge on Various diagnostic procedures used in Radiology					K3
5	Understood radiological safety during diagnosis					K2
K1 - Remember; K2 - Understand; K3 - Apply; K4 - Analyze; K5 - Evaluate; K6 - Create						
Unit:1						
Introduction to Ionizing Radiation and Cancer			10 --hours			
Radiation: Definition, electromagnetic spectrum- ionization- types of radiation- Radiation quantities and units: absorbed dose, equivalent dose, effective dose- Interaction of radiation with matter: Photoelectric effect- sources, properties and hazards of ionizing radiation- biological effects- applications of radiation- radiation safety principles.						
Cancer: Definition, carcinogenic agents, types, stages, organization of body, genes responsible for cancer, treatment efficacy, and medical ethics.						
Unit:2						
Diagnostic Imaging Modalities			12 --hours			
Radiology in Cancer diagnosis: History, working principle, equipment, mode of diagnosis and safety in Radiography - Digital Radiography, Fluoroscopy – Computed Tomography – Magnetic Resonance Imaging (MRI) - Mammography- Gamma camera and PET.						
Unit:3						
Contemporary Issues			2 hours			
<a href="https://www.youtube.com/watch?v=hBRJ0qDgpf8">https://www.youtube.com/watch?v=hBRJ0qDgpf8</a>						
<a href="https://www.youtube.com/watch?v=YzV1kovMjkI">https://www.youtube.com/watch?v=YzV1kovMjkI</a>						
<a href="https://www.radiologyinfo.org/en/info.cfm?pg=bodyct">https://www.radiologyinfo.org/en/info.cfm?pg=bodyct</a>						
			Total Lecture hours		24-hours	
Text Book(s)						
1	Momna Hejmadi, Introduction to cancer biology, 2nd edition, 2010.					
2	The Physics of radiology, H.E.Johns and Cunningham, Charles C Thomas Publishers, 1 <sup>st</sup> Edition, 1984.					
Reference Books						
1	Curry, T.S., Dowdey, J.E., Murry, R.C., Christensen's introduction to the physics of diagnostic radiology, Philadelphia: Lea & Febiger, 4 <sup>th</sup> Edition, 1990.					

2	Herman Cember and Thomas E. Johnson, Introduction to Health Physics, McGraw-Hill Education / Medical; 4 <sup>th</sup> Edition, 2008.

Course Designed By: <b>Dr. C. S. Sureka &amp; Dr. S. HarikrishnaEtti</b>	

Course code	GS122	RADIOTHERAPY FOR CANCER	L	T	P	C
Core/Elective/Supportive		Supportive	2	0	0	2
Pre-requisite		Physics and Biology	Syllabus Version		2021-22	
<b>Course Objectives:</b>						
The main objectives of this course are to:						
1. Understand the physics behind cancer diagnosis and treatment.						
2. Aware of the facilities in Radiation oncology department.						
3. Know the basic principle and execution of various radiotherapy procedures.						
<b>Expected Course Outcomes:</b>						
On the successful completion of the course, student will be able to:						
1	Understood the basics behind Medical Physics.					K2
2	Learnt about the possible modalities to treat cancer.					K2
3	Gained knowledge on the physics of radiotherapy equipment's.					K2
4	Understood the working of radiotherapy equipment's.					K2
5	Safety procedures of radiotherapy equipment's.					K2
<b>K1</b> - Remember; <b>K2</b> - Understand; <b>K3</b> - Apply; <b>K4</b> - Analyze; <b>K5</b> - Evaluate; <b>K6</b> - Create						
<b>Unit:1</b>						
<b>Introduction to Radiotherapy</b>			<b>10 --hours</b>			
History- Physics in Medicine- Dosimetric quantities: absorbed dose, exposure and kerma- Department of Radiation oncology- Duties of Medical Physicists and RSO- Treatment procedure- Overview to plan a diagnostic radiology, radiotherapy and nuclear medicine department. .						
<b>Unit:2</b>			<b>Radiotherapy techniques</b>		<b>12 --hours</b>	
Radiotherapy: Introduction, principle, various technologies, treatment procedure and safety in Teletherapy - cobalt therapy - Linear Accelerators Electron and Photon - LDR and HDR Brachytherapy, Treatments using Nuclear medicine sources - proton and Ion beam therapy.						
<b>Unit:3</b>			<b>Contemporary Issues</b>		<b>2 hours</b>	
<a href="https://www.youtube.com/watch?v=97-5sIXuzpo">https://www.youtube.com/watch?v=97-5sIXuzpo</a> <a href="https://www.youtube.com/playlist?list=PLR5923ISbcx_I2VkHgXGwAuHaP8tUNEkN">https://www.youtube.com/playlist?list=PLR5923ISbcx_I2VkHgXGwAuHaP8tUNEkN</a>						
			<b>Total Lecture hours</b>		<b>24 --hours</b>	
<b>Text Book(s)</b>						
1	E.B. Podgorsak, Radiation Oncology Physics: A Handbook for Teachers and Students, International Atomic Energy Agency (IAEA) publications, 2005.					
<b>Reference Books</b>						
1	E. B. Podgarsak, Radiation Physics for Medical Physicists, Springer Verlag, 1 <sup>st</sup> Edition, 1996.					
<b>Related Online Contents [MOOC, SWAYAM, NPTEL, Websites etc.]</b>

Course Designed By: <b>Dr. C. S. Sureka &amp; Dr. S. Harikrishna Etti</b>						

# Annexure

## M. Sc. Medical Physics

### Syllabus

(With effect from the academic year 2021- 2022 onwards)

**Program Code: MPHA**

### DEPARTMENT OF MEDICAL PHYSICS

**Bharathiar University**

(A State University, Accredited with “A“ Grade by NAAC and  
13<sup>th</sup> Rank among Indian Universities by MHRD-NIRF)

**Coimbatore 641 046, INDIA**

**BHARATHIAR UNIVERSITY:: COIMBATORE 641046**  
**DEPARTMENT OF MEDICAL PHYSICS**

**VISION**

To produce professionally competent Medical Physicists and Radiological Safety Officers (RSO) to the nation through effective teaching along with clinical exposure and translational research programs.

**MISSION**

The Mission of the Department is to

- ✓ Train Medical Physics professionals to ensure utmost quality patientcare.
- ✓ Provide excellent learning opportunities and educate in a variety of Medical Physics oriented disciplines including radiology, radiation oncology, nuclear medicine and radiobiology.
- ✓ Provide outstanding training in Medical Physics service for the safe and effective delivery of cutting edge radiotherapy treatments and medical imaging at par with International standards.
- ✓ To produce professionally competent Medical Physicists who can adopt in the Industry environment as well.
- ✓ Our research mission is to develop better methods and technologies for the personalized diagnosis and treatment of cancer disease focusing on radiation based approaches in medical imaging, radiation oncology, and image guided intervention.
