BHARATHIAR UNIVERSITY COIMBATORE

A three-year Under-Graduate Programme in

B. Sc. (Blended) Chemistry

Offered By Centre for International Affairs (CIA), Bharathiar University

in collaboration with The University of Melbourne

(For the students admitted during the academic year 2023 – 24 onwards)

Syllabus for SEM I - VI

(To Be Implemented from Academic Year 2023 – 2024)

Overview of the B. Sc. (Blended) Course

Bharathiar University is offering an innovative Bachelor's Degree known as B.Sc. (Blended) in collaboration with the University of Melbourne (UoM), Australia, to strengthen science education at the undergraduate level.

Bharathiar University is among the top universities in the country and has been at the forefront of initiating innovative programs. The UoM is ranked #1 in Australia and has been among the top 50 universities in the world.

The B.Sc. (Blended) course is a joint initiative of BU-UoM, offering a transparent and internationally recognized bachelor's degree that clearly outlines the teaching objectives and learning outcomes. In the first two years of the degree program, students will study all four basic sciences (Biology, Chemistry, Mathematics, and Physics), and in the third year, they will specialize in either Physics or Chemistry. The UoM will provide support in terms of special lectures, workshops, and quality assurance.

The B.Sc. (Blended) course aims to achieve the following objectives:

- Introduce students to the fundamental concepts of science education.
- Enrich students' knowledge in all basic sciences, including Biology, Chemistry, Mathematics, and Physics.
- Help students develop an interdisciplinary approach to learning that integrates various scientific fields.
- Inculcate a sense of scientific responsibility, social awareness, and environmental consciousness in students.
- Assist students in building a successful and progressive career in academia and industry by providing them with the necessary skills and knowledge.

The B.Sc. (Blended) course will be jointly conducted by Bharathiar University and the University of Melbourne (UoM).

The following features are included in the course:

- Special lectures will be delivered by expert faculty from UoM.
- The course will be quality assured by UoM, ensuring that it meets the highest standards of education.
- Upon completion, the degree will be considered equivalent to a degree from UoM, enabling students to pursue higher studies at UoM or any other Australian university.
- The collaboration with UoM ensures that students receive an internationally recognized education of the highest quality, opening up opportunities for further academic pursuits and careers in various fields. The students will be imparted solid training to enable them to pursue Masters and Integrated Ph. D. degrees in reputed institutes such as IITs, IISERs and Central Universities

Eligibility

Higher Secondary School Certificate (10+2) or its equivalent Examination in Science stream with either PCM group (Physics, Chemistry & Mathematics) or PCMB group (Physics Chemistry, Mathematics & Biology)

Course Structure

- The B.Sc. (Blended) course follows a semester and credit system that spans over six semesters of 14-16 weeks each. The course curriculum is divided into two phases: the first two years and the third year.
- During the first two years, students will receive instruction in the four basic sciences, namely Biology, Chemistry, Mathematics, and Physics. In the third year, students will specialize in either Physics or Chemistry.
- The curriculum is designed to provide students with a well-rounded education in the sciences, preparing them for further academic pursuits or careers in various scientific fields.

Examination and Grading

- The B.Sc. (Blended) course follows a credit-based system, and its examination process comprises two parts: continuous assessment (internal 50%) and end-semester examination (50%).
- The internal assessment will be based on various parameters, including classroom examinations (subjective/objective), fieldwork, viva-voce, assignments, lab work, tutorials, and group discussions. The grading will be carried out in accordance with the university norms applicable to the credit system.
- This examination process ensures that students are regularly assessed and evaluated based on their academic performance, facilitating a more comprehensive understanding of the subjects and enhancing the overall learning experience. The grading will be as per the university norms applicable to credit system.

University Terms

- The commencement and conclusion dates for the odd and even semesters of the B.Sc. (Blended) course will adhere to the university regulations applicable to other departments.
- To be eligible for the term-end examination, students must fulfill the minimum attendance requirement of 75 percent for both theory and practical courses. Additionally, students must demonstrate satisfactory performance during the term.

Adherence to these guidelines ensures that students attend classes regularly and maintain consistent academic performance throughout the term. This, in turn, promotes a positive and conducive learning environment for all students.

Intake capacity of student: B. Sc. Blended course: 40 (20 for Physics and 20 for Chemistry)

Duration: The duration of B. Sc. (Blended) Degree Program shall be of three years.

Medium of Instruction: The medium of instruction for the course shall be English.

Scheme of Examinations (CBCS Pattern)

Number of weeks in a semester: 14-16 (excluding holidays and one week mid semester examination)

Nomenclature: BIO: Biology. CHM: Chemistry. MTH: Mathematics PHY: Physics ENG: English; COMP –Computing; IDC: Interdisciplinary Course; FLX: Flexible timetabling

1 Credit =1 Contact hour per week both for theory and lab courses

SEMESTER I

| Course code | MTH101 | Maths-1 | 4 Cı | edits |
|----------------|--------|------------|---------------------|---------|
| Core/Elective/ | 'SBS | CORE PAPER | | |
| | | | Syllabus Version | 2023-24 |

Unit-1:Logic and Proof

Basic set theory(review)

Logical connectives (conjunction, disjunction, negation, conditional, bi-conditional) and truth tables

Propositional logic, logical equivalence, logical laws

Quantifiers, predicate calculus

Relations, equivalence relations, ordering

Functions including injective, surjective, bijective, inverse, composition

Unit-2:

Number systems: Natural numbers, integers, rational numbers and their Properties(eg. closure under addition/multiplication/division; existence of

additive/multiplicative identity/inverses)

Real numbers and their properties; completeness property

Proof methods: direct proof, Contrapositive Proof methods: contradiction, proof by cases

Proof methods: induction

Natural numbers, integers, rational numbers

Real numbers

Unit-3: Sequences and series

Sequences, limits, convergence and divergence

Proving limits using definition

Methods for evaluating limits: standard limits, limit theorems, continuity

rule, sandwich theorem

Series, convergence and divergence of series, geometric series, harmoni cp-series

Series convergence tests: divergence test, comparison test

Series convergence tests: ratio test, integral test, alternating series test

Power series, Taylor polynomials

Taylor series

Taylor's theorem, error in Taylor polynomial estimates

Unit-4: Differential calculus& Integral Calculus

Review of differential calculus: limits, derivative, differentiation rules incl. polynomials, trigonometric, exponential, log functions; product, quotient, chain rules

Review of inverse trigonometric functions and their derivatives, implicit differentiation Integral calculus

Riemann integration

Fundamental Theorem of Calculus; review of standard anti-derivatives

Techniques of integration(review): derivative present substitution, linear substitution

Unit-5

Techniques of integration (review): integration of trigonometric functions Using identities

Techniques of integration (review): integration of rational functions

Including partial fractions, integration yielding inverse trig functions

Techniques of integration (review): trigono metric substitutions;

Integration by parts Improper integrals

Applications of integration: areas between curves

Applications of integration: volumes of surfaces of revolution

Ordinary differential equations: definition of ODE, order, general solution, initial conditions;

separable ODEs

Solving linear ODE using integrating factor

Particular solutions of in homogeneous constant coefficient linear ODEs Using method of

undetermined coefficients; principle of superposition

| | | List of Experiments | • | | |

List of Physical chemistry experiments (Any 2)

- 1. To determine the rate constant of the hydrolysis of Ethyl acetate using an acid catalyst.
- 2. Molar mass determination of some base metals, gases.
- 3. Determination of dissociation constant of a weak acid.
- 4. Determination of heat capacity of a calorimeter for different volumes using change of enthalpy data of a known substance.
- 5. Calculation of the enthalpy of ionization of ethanoic acid.

List of Inorganic chemistry experiments (Any 2)

Types Basic Analytical Terms: Volumetric and Gravimetric analysis, Titration, of titration viz. acid base, redox, iodometric, iodometric and complexometric titrations, Types of indicators, Selection of indicator, Aquametry (Karl-Fisher titration)

- 1. Oxalate Complexes of Aluminum and Chromium.
- 2. Estimation of Fe (II) with K₂Cr₂O₇ using internal external (diphenylamine, anthranilic acid) and external indicator.
- 3. Estimation of sodium carbonate and sodium hydrogen carbonate present in a mixture.
- 4. Estimation of Fe (II) and oxalic acid using standardized KMnO₄ solution.

List of Organic chemistry experiments (Any 3 in Each Group)

1. Techniques:

Crystallization, Sublimation, Distillation, Steam Distillation, Vacuum Distillation, Column Chromatography, Thin Layer Chromatography. Record Melting Point & Boiling Point.

2. Functional group tests following functional groups

Alcohols, Alkenes, Aldehydes and Ketones, Acids, Phenols, Amines, Amides, Esters. Aromatic compounds.

3. Preparations:

Preparation of 4, 4'-Dimethoxy-dibenzylideneacetone Preparation of 4-tert-Butylphenol

Reduction of p-nitro benzaldehyde by sodium borohydride

Nitration of Salicylic acid by green approach (using ceric ammonium nitrate).

Bromination of cinnamic acid.

SEMESTER II

| Course code | MTH201 | Maths-2 | 4 Cre | dits |
|---------------|--------|------------|---------------------|---------|
| Core/Elective | /SBS | CORE PAPER | | |
| | | | Syllabus Version | 2023-24 |

Unit-1: Analysis

Limits of real-valued functions

Proving limits using the definition

Continuity & differentiability

Examples of differentiable and non-differentiable functions; continuity and differentiability of standard functions including polynomials, trigonometric, exponential, log functions and their inverses

Techniques for evaluating limits including L'Hopital'srule, sandwich

theorem

Mean Value Theorem and applications

Applications of differential calculus eg. related rates

Unit-2: Complex Numbers

Complex numbers

Review of complex numbers including algebra, Arg and plane, cartesian

And polar form

Complex exponential

Fundamental Theorem of Algebra

deMoivre's theorem; roots of complex numbers

Unit-3: Vectors

Vector arithmetic, dot product, vector projections (review)

Vector cross product; scalar triple product; para metric curves specified by vector equations Lines and planes in R^3

Lines and planes in R³

Unit-4:LinearAlgebra1

Solving systems of linear equations with Gaussian elimination

Solutions of systems of linear equations - consistency, uniqueness

Geometric interpretation of solutions

Matrices, matrixaddition, multiplication, transpose and properties (review)

Matrix inverse

Determinant

R^n as a vector space, linear independence of vectors in R^n

Span of a set of vectors, sub spaces of R^n

Unit-5:Linear Algebra 1A

Basis and dimension in R^n

Abstract vector space axioms; examples and non-examples of vector spaces

Bases, dimension and co-ordinatesin (finite dimensonal) abstract vector spaces

Definition of linear transformation and examples/non-examples

Linear transformations of the plane Matrix representation of a linear transformation Image and kernel of a linear transformation Rank and nullity

Reference Books

Calculus: Early Transcendentals, Seventh edition by James Stewart. Publisher: Brooks/Cole Year: 2010; ISBN: 9780538497909 (Hardcover), 1170 pp

Complex Variables and Applications by James Brown, Ruel Churchill. Publisher: McGraw Hill Higher Education; Year: 2013; ISBN-13: 978-0073383170, 480 pp.

Vector Calculus by Susan Colley. Publisher: Pearson; Year: 2011; ISBN-13: 978-0321780652, 624 pp.

Linear Algebra And Its Applications by Gilbert Strang. Publisher: Cengage India Private Limited; Year: 2005; ISBN-13:978-8131501726; 544 pp.

| Course code | PHY201 | Physics 2: Modern Physics | | 4 Cre | edits |
|---------------|--------|---------------------------|-------------|--------------|---------|
| Core/Elective | e/SBS | CORE PAPER | | | |
| | | | Syll Ver | abus sion | 2023-24 |
| Unit:1 | | Electricity | | | |

Electric charge, conductors and insulators — Coulomb's Law, superposition principle — Electric field, superposition principle — Electric flux — Gauss's law, applications — Energy and electric field; electric potential — Calculating potential from the field, electric potential, potential energy surfaces — Electric dipoles — Capacitance; parallel plate capacitors — Energy storage in capacitors, dielectrics, series and parallel circuits — Conductors, electric current, electric power, Ohm's law — Kirchoff's rules, resistors in series and parallel circuits.

Unit:2 Magnetism

Magnetic field, magnetic force, Lorentz force, cyclotrons – ion velocity filter, Hall effect, - Bio-Savart Law, Ampere's Law, solenoids, earth's magnetic field - Magnetic field due to a current, forces on current – carrying wires, Electromagnetic induction, magnetic flux – Lenz' Law, Faraday's law, Maxwell's equations, applications – Magnetic materials.

Unit:3 Oscillations and Waves

Damped harmonic motion, resonance – electronic circuits, evolution of populations – One dimensional waves, Interference and standing waves, Sound waves and the speed of sound, Intensity, sound level and the physics of music – Doppler effect and supersonic motion, shock waves.

Unit:4 Optics

Images and mirrors – Thin lenses and optical instruments – Young's experiment, interference – Thin films and the Michaelson interferometer – Diffraction by slits and apertures – Diffraction by grating sand X-ray diffraction – Optical Microscopy – Spectroscopy.

Unit:5 Modern Physics

Challenges to classical physics; special relativity – Lorentz transformation, transformation of velocities, Doppler effect – Relativistic momentum and energy – Photons and the photoelectric effect – Quantum physics, black body radiator, matter waves – Trapped particles and the tunneling particles – Nuclear physics, nuclear properties, nuclear decay – Quarks, Leptons, The Big Bang.

| Course code PHY202 | PHYSICS PRACTICAL 2 | 2 Credits | |
|--------------------|---------------------|-----------------------------|--|
| Core/Elective/SBS | CORE PRACTICAL | | |
| | | Syllabus Version 2023-24 | |

LIST OF EXPERIMENTS:

- 1. Young's Modulus Non-uniform pending methods
- 2. Determination of the radius of a current carrying coil 2-Determination of magnetic field with the variation of distance along the axis of current carrying coil.
- 3. To determine the Wavelength of main spectral line of mercury light using plane transmission grating.
- 4. To determine the Refracting Angle, Refractive Index and Dispersive power of prism using spectrometer.
- 5. To determine the coefficient of thermal Conductivity of bad conductor by Lee's Disc.
- 6. Charging and Discharging of Capacitor.
- 7. Verification of Kirchhoff's law.

Reference Books

1 A text book of practical Physics, M.N.Srinivasan, S.Balasubramanian, R.Ranganathan, Sultan

Chand & Sons(2017).

List of Physical chemistry experiments (Any 2)

- 1. To determine the rate of chemical reaction by using hydrolysis of tert-Butyl chloride.
- 2. Effects of catalase enzyme obtained from potato in cleaving H₂O₂ into H₂O and O₂.
- 3. To measure the vapour pressure of n-Pantane by using high vacuum line.
- 4. Heat of solution of KNO₃/ NH₄Cl.
- 5. Glass electrode- Buffer solutions: To titrate a weak base (Na₂CO₃) with a strong acid a) an acid-base indicator,(b) a glass electrode

List of Inorganic chemistry experiments (Any 2)

- 1. Synthesis of hexamine nickel (II) [Ni(NH₃)₆]I₂
- 2. Cuprous Chloride, Cu₂Cl₂
- 3. The transition metals: a survey (Transition metals in biological systems and Bonding in complex ions).
- 4. Estimation of Cu (II) and K₂Cr₂O₇ using sodium thiosulphate solution (Iodometrically).
- 5. Estimation of available chlorine in bleaching powder iodometrically.

List of Organic chemistry experiments (Any 3 in Each Group)

Preparation of Derivatives:

Oxime, 2, 4-DNP, Acetyl, Benzoyl, Semicarbazone, Anilide, Amide, Aryloxyacetic acid.

2. Organic single stage preparation:

The preparation of paracetamol.

The synthesis of meso-1,2-Dihydroxy-1,2-Diphenylethane.

Preparation of α -phenyl Cinnamic acid from Benzaldehyde.

Preparation of benzyl alcohol from Benzaldehyde

Preparation glucose pentaacetate from Glucose.

Preparation of 2-iodobenzoic acid from Anthranilic acid.

Use of Computer (Chemistry Software)

Chem Draw-Sketch, ISI – Draw, Draw the structure of simple aliphatic, aromatic, heterocyclic organic compounds with substituents. Get the correct IUPAC name.

| Core | | CORE PAPER | | | | |
| Pre-requis | ite | | Syllabus Version | | 202 | 22-23 |

Unit 1: Introduction to Scientific Computing

Overview: Definition; Scope; Importance, Mathematical Foundation: Numerical Representation; Basic Linear Algebra, Programming Basics: Introduction; Variable; Data Types; Basic Operations; Control Structures.

Unit 2: Numerical Methods

Root Finding and Optimization: Bisection Method; Newton-Rhapson Method, Linear Systems: Gaussian Elimination; LU decomposition, Interpolation and Approximation: Lagrange interpolation; Polynomial interpolation; Least squares approximation.

Unit 3: Differential Equations

Ordinary Differential Equations (ODEs): Euler's method; Runge-Kutta methods, Partial Differential Equations (PDEs): Classification; Finite difference methods, Applications of ODEs and PDEs: Physical systems modeling; Heat equation, wave equation, and diffusion equation.

Unit 4: Data Analysis and Visualization

Data Manipulation and Analysis: Introduction to data structures; Statistical analysis using computational tools, Visualization Techniques: Plotting and graphing data; 2D and 3D visualization.

Unit 5: Advanced Topics in Scientific Computing

Parallel and High-Performance Computing: Introduction to parallel computing; Parallel algorithms and architectures; High-performance computing clusters, Machine Learning for Scientific Modeling: Basics of machine learning; Applications of machine learning, Advanced Topics in Modeling: Agent-based modeling.

Text Book(s)

Scientific Computing: An Introductory Survey" by Michael T. Heath. This book provides an overview of scientific computing, including numerical methods and algorithms, and discusses their implementation using various programming languages.

"Python for Scientists" by John M. Stewart. This book is specifically designed for scientists and engineers, providing an introduction to Python programming and its application in scientific computing.

VALUE ADDED 2: HUMAN RIGHTS

| Course code | 2FB | Human Rights | | L | т | Р | С |
|---------------|-----|--------------------------------|------------------|---|-----|---|---|
| Value Added | | Value Added 2 | | 2 | - | - | 2 |
| Pre-requisite | | Awareness on Ethics and Values | Syllabus Version | | 202 | | |

Course Objectives:

The main objectives of this course are to:

1. Create awareness, conviction and commitment to values for improving the quality of life through education, and for advancing social and human wellbeing

Expected Course Outcomes:

On the successful completion of the course, student will be able to:

| 1 | Understand human values and value education | K1 |
|---|--|----|
| 2 | Learn their role in national development | K1 |
| 3 | Understand global development with ethics and values | K1 |
| 4 | Learn various therapeutic methods | K1 |
| 5 | Learn and understand human rights | K1 |

K1 - Remember; K2 - Understand; K3 - Apply; K4 - Analyse; K5 - Evaluate; K6 - Create

Unit:1 Concept of Human Values, Value Education Towards Personal Development 3 Hours

Aim of education and value education; Evolution of value-oriented education; Concept of Human values; types of values; Components of value education. Personal Development: Self-analysis and introspection; sensitization towards gender equality, physically challenged, intellectually challenged. Respect to - age, experience, maturity, family members, neighbours, co-workers. Character Formation Towards Positive Personality: Truthfulness, Constructivity, Sacrifice, Sincerity, Self-Control, Altruism, Tolerance, Scientific Vision.

Unit:2 Value Education Towards National and Global Development 4 Hours

National and International Values: Constitutional or national values - Democracy, socialism, secularism, equality, justice, liberty, freedom, and fraternity. Social Values - Pity and probity, self-control, universal brotherhood. Professional Values - Knowledge thirst, sincerity in profession, regularity, punctuality, and faith. Religious Values - Tolerance, wisdom, character. Aesthetic values - Love and appreciation of literature and fine arts and respect for the same. National Integration and international understanding.

| Impact of Global Development on Ethics and Values | 3 Hours |
|---|---|
| 1 | Impact of Global Development on Ethics and Values |

Conflict of cross-cultural influences, mass media, cross-border education, materialistic values, professional challenges, and compromise. Modern Challenges of Adolescent Emotions and

behaviour; Sex and spirituality: Comparison and competition; positive and negative thoughts. Unit:4 **Therapeutic Measures** 3 Hours Control of the mind through a. Simplified physical exercise b. Meditation - Objectives, types, effect on body, mind and soul c. Yoga - Objectives, Types, Asanas d. Activities: (i)Moralisation of Desires (ii) Neutralisation of Anger (iii) Eradication of Worries (iv) Benefits of Blessings Unit:5 | Human Rights 3 Hours Concept of Human Rights – Indian and International Perspectives a. Evolution of Human Rights b. Definitions under Indian and International documents 2. Broad classification of Human Rights and Relevant Constitutional Provisions. a. Right to Life, Liberty and Dignity b. Right to Equality c. Right against Exploitation d. Cultural and Educational Rights e. Economic Rights f. Political Rights g. Social Rights 3. Human Rights of Women and Children a. Social Practice and Constitutional Safeguards (i)Female Foeticide and Infanticide (ii)Physical assault and harassment (iii)Domestic violence (iv)Conditions of Working Women 4.Institutions for Implementation a. Human Rights Commission b. Judiciary 5. Violations and Redressal a. Violation by State b. Violation by Individuals c. Nuclear Weapons and terrorism d. Safeguards. Unit:6 **Contemporary Issues** 2 Hours Case Study, Expert Lectures, Online Seminars - Webinars **Total Lecture Hours** 18 Hours Textbook(s) Value Education – Human Rights, Bharathiar University Related Online Contents [MOOC, SWAYAM, NPTEL, Websites etc.]

Human Rights in India - By Prof. (Dr.) Y.S.R. Murthy | O.P. Jindal Global University - SWAYAM

| | | | | | |
| Unit:1 | Unit:1 Organic Synthesis 08 L | | 08 L | | |

C-C bond Forming Reactions: Grignard Reagents and Organolithiums. Formation and reaction with Carbonyl compounds.

Organometallic Reagents in Synthesis: Applications of Organocerium and Organocuprate reagents.

Carbonyl Compounds and Reactions: Carbonyl compounds, Tautomerism as a general phenomen, keto-enoltautomerism of carbonyl compounds, mechanism of keto-enoltautomerism - Generating enolate anions, suitable base catalysts for enolising aldehydes, ketones, and ester and β-dicarbonyl compounds, general α- Substitution reaction. Reactions of enols and enolates, α-substitution with H/D⁺Stereochemical consequences and deuterium incorporation, Halogenation of carbonyl compounds. The haloform reaction, Halogenation of carbonyls, Hell-Volhard-Zelinsky reaction, Synthetic applications of a-halocarbonyl compounds. Alkylation of enolates, LDA, scope and limitations. Aldol reaction, mechanism and retro synthesis, inter-and-intra-Molecular variants, mixed Aldol reaction. Claisen reaction, mechanism and retro synthesis, mixed Claisen and Deickman reaction. MalonateDiester Chemistry, Acetoacetate chemistry, Synthesis of Substituted acetic acid and acetone derivatives, Scope, Mechanism and Retro synthesis. Michael addition Chemistry, reaction of enolates with various Michael electrophiles. Kinetic and Thermo dynamic enolates, Enamines and silylenol ethers

| Unit:2 | Redox (and important acid-base) Reactions: | 08 L |
|--------|--|------|
| | | |

Oxidation of elements by halogens and dioxygen. Metal and main group halides and oxides. Discussion of selected syntheses, chemistry and structures of halides and oxides including amphoteric behaviour and hydroxide/aqua ion formation.

Thermodynamic vs. kinetic control of reactions. Thermodynamic aspects of halide and oxide formation. Thermodynamic parameters, their estimation and uses of tabulations. Born-Haber cycle and construction and uses of Ellingham diagrams for these systems. (Electrides and

sodides).

Oxidation of metals by protons etc. and generation of aqua ions. Comparison of TM and main group systems and hydrolysis in TM aqua ions (acid-base chemistry of coordinated water-hydroxide-oxo ligands). Connection between electrochemical and thermo dynamic parameters. Construction and uses of Latimer and Frost diagrams. Interpretations of Frost diagrams exemplified by the more complex chemistry of main group elements, such as nitrogen.

Thermodynamic content of plots (free energy of formation vs. oxidation state) and predictive power. Nernst equation revisited and construction and uses of Pourbaix diagrams combining redox and acid base reactions. Comparison of chemistry of representative elements as reflected in Pourbaix diagrams.

| Unit:3 | Exchange reactions | 06 L |
|--------|--------------------|------|
| | _ | |

Solid/gas phase systems exemplified by transport reactions and preparation of solid-state materials, in volcanology, halogen lamps etc. Solution examples of doubled composition (metathesis). Solubility trends, Common ion effect.

Hard/soft acid/base theory. Thermodynamic basis for HSAB theory. Usefulness in predicting direction of equilibrium and solubility.

| Unit:4 | Substitution Reactions | 06 L |
|--------|------------------------|------|
| | | |

Typical reactions and synthetic applications and examples. Inert and labile complexes. Stability (K,b) and factors affecting stability (metals, ligands). Irving-Williams series, Chelate effect. Applications of chelate effect. Siderophores. Antioxidants, garden products, chelation therapy in medicine.

Mechanism of substitution reactions. Square planar Pt complexes and applications. Trans effect, Pt chemistry, Applications in synthesis of action of chemotherapeutic agents.

Dissociative, interchange and associative mechanisms in substitution, racemization *etc*in octahedral complexes.

Combination of substitution and redox chemistry in TM systems.

Co(III) syntheses, Cr(II) catalysed substitution. Electron transfer, inner-and outer-sphere

reactions.

Metal centered reactions: Template reactions and reactions of coordinated ligands. Atom transfer reactions (redox reactions). Metal directed ligand syntheses

| Unit:5 | Thermodynamics | 08 L |
|--------|----------------|------|
| | | |

Ideal gases, the kinetic theory of gases, equipartition theory, Boltzmann distribution, Heat, work, internal energy. First law of thermo dynamics. Heat Capacity and enthalpy. Compression of an ideal gas under various conditions. Latent heats, Multiplicity and ideal gases. Entropy, spontaneous change and the Second Law of Thermodynamics. Interacting ideal gases and the entropy of mixing. Gibbs Free energy and spontaneity, Helmholtz Free energy, standard free energies, free energy as a function of pressure and temperature.

The Fundamental equation, properties of internal energy and Maxwell's relations. Thermodynamics criteria for chemical and phase equilibria, chemical potential and partial molar quantities, the Gibbs Free Energy, minimum and equilibrium, extent of reaction and equilibrium constant, molecular description of equilibrium, response of equilibria to temperature.

Thermodynamics of liquids and liquid mixtures, chemical potentials of liquids, ideal liquid mixtures and Raoult's Law, Henry's Law, vapor pressure diagrams, liquid-liquid phase diagrams, Free energy and entropy of mixing, excess functions and real solutions, solute and Solvent activity, activity coefficient, osmotic pressure

PHY302 - Physics Practical - 2 Credits

- 1. Michealson's interferometer: To find the wavelength of given laser beam.
- 2. Specific charge of the electron(e/m): To find the specific charge of the electron from the path of an electron beam in crossed electric and magnetic fields of variable strength.
- 3. Rydberg's constant: To find Rydberg's constant using diffraction grating.
- 4. Photoelectric effect: To estimate Planck's constant and work function of the photoelectrons by measuring the variation of stopping potential with the frequency of light. To see the graph of current Vs voltage for different intensity and frequency of light.
- 5. Electron diffraction: To measure diameter of smallest diffraction rings at different anode voltages.
- 6. Millikan soil drop experiment: To measure to charge of the electron.

CHM302 - Chemistry Practical - 2 Credits

List of Physical chemistry experiments

- 1. Thermodynamic data of electrochemical cell by e.m.f. measurements.
- 2. Determination of the equilibrium constant of tri-iodide ion formation
- 3. Determination of dipole moment f liquid at various temperatures
- 4. Dissociation constant of an acid-base indicator by spectrophotometry
- 5. Flame Photometric determination of Na, K, Li and Ca (Working curve method, standard addition method and Internal standard method)
- 6. A photometric titration of a mixture of Bi and Cu with EDTA(-745nm)
- 7. The reaction between potassium per sulphate and potassium iodide by colorimetry.
- 8. Hydrolysisconstantofanilinehydrochloridebydistributioncoefficient method.
- 9. Thermodynamic data of electrochemical cell by e.m.f. measurements.
- 10. Determination of the equilibrium constant of tri-iodide ion formation
- 11. Determination of dipole moment of liquid at various temperatures
- 12. Determination of concentration of sulfuric acid, acetic acid and copper sulphate by conduct o metric titration with sodium hydroxide.
- 13. Determine the formula and stability constant of a metal ion complex (Lead Oxalate) by polarography.

List of Inorganic chemistry experiments

1. Analysis of ore(Any one)

- i) Pyrolusite ore –Estimation of silica gravimetrically and Manganese volumetrically.
- ii) Chromite ore-Estimation of Iron gravimetrically and Chromium volumetrically

2. Analysis of Alloy

Solder alloy—Estimation of Tin gravimetrically and Lead volumetrically

- **3. Column Chromatography:** Ion exchange capacity of resine by Co and Ni.
- 4. Characterization of soil and water.

List of Organic chemistry experiments

- 1. Separation of Binary Mixture (8-10samples)
- 2. Preparations: Single Stage
 - a. Ethyl benzene from acetophenone
 - b. P-Nitrobenzylcyanide from Benzyl cyanide.

- c. 2,4dinitroanisolefromanisole
- d. Azo dye from Anthranilic acid
- e. Osazone from Glycose
- f. Cinnamic acid dibromide from Cinnamic acid
- g. Chalcone from P-chloro Benzaldehyde.
- h. Hippuric acid from Glycine
- i. 4-formyl resorcinol from Resorcinol.
- j. Adipic acid from Cyclohexanone
- k. 4,6 dimethyl coumarin from p-cresol.
- 1. Cannizzaro reaction of aromatic aldehyde.

BIO302 - Biology Practical - 2 Credits

Any 5 Experiments

- 1. Preparation of media, autoclaving and culturing of bacteria
- 2. Plating techniques
- a) Pour plate b) Streaking c) Spread plate technique
- 3. Dilution and colony counting
- 4. Bacterial Growth curve
- 5. Enzyme kinetics (effect of pH, temperature, substrate and enzyme concentration)
- 6. Estimation of glucose
- 7. Antibiotic sensitivity test: zone of inhibition

IDC301Scientific Computation and Modeling: Projects* - 2 Credits

Scientific Computing is the collection of tools, techniques, and theories required to solve on a computer mathematical models of problems in Science and Engineering.

VALUEADDED 3: YOGA FOR HUMAN EXCELLENCE (2 CREDITS)

Course code: 3FC Total Lecture Hours 18 hours

Yoga and Physical Health

Physical Structure- Three bodies -Five limitations

 $Simplified\ physical\ Exercises-Hand\ Exercises-Leg Exercises-Breathing Exercises-Eye$

Exercises – Kapalapathi

Matrarasanas-Massages -Acupuncture- Relaxational

Yogasanas-Padmasana-Vajrasanas-Chakrasanas(Side)-Viruchasanas-Yogamuthra-

Patchimothasanas -

Ustrasanas - Vakkarasanasi – Salabasanas

Art of Nurturing the life force and Mind

Maintaining the youthfulness-Postponing the ageing process

Sex and Spirituality-Significance of sexualvital fluid-Married life -Chastity

Ten stages of Mind

Mental frequency-Methods for concentration

Sublimation

Purpose and Philosophy of life Introspection-Analysis of Thought

Moralization of Desires

Neutralization of Anger

Human Resources development

Eradication of worries

Benefits of Blessings

Greatness of Friendship

Individual Peace and World Peace

Law of Nature

Unified force-Cause and Effect system

Purity of Thought and Deed and Genetic centre

Love and Compassion

Cultural Education- Fivefold Culture

Textbook(s)

- 1. Manavalakalai Yoga, Vedathiri Publications
- 2. Simplified Physical Exercises-Vethathiri Maharishi, Vethathiri Publication. Yogasanas-Vethathiri Publication
- 3. Yoga for Modern Age-Vethathiri Maharishi, Vethathiri Publications
- 4. The World Order of Holistic Unity Vethathiri Maharishi, Vethathiri Publications
- 5. Sound health through yoga-Dr. K. Chandrasekaran.

Semester IV

| MTH401: Probability and Statistics – 4 Credits | |
|---|-----------------|
| Probability | No. of Lectures |
| Review of probability, events, laws of probability | 1 |
| Conditional probability, independent events | 1 |
| Random variables; discrete random variables and distributions; mean, | 4 |
| variance and standard deviation of discrete random variable | 1 |
| Bernoulli trials, binomial distribution | 1 |
| Poisson distribution and Poisson process | 1 |
| Continuous random variables and distributions, probability density | 1 |
| functions, cumulative distribution function | 1 |
| Mean, variance, standard deviation, median and percentiles of a continuous | 1 |
| distribution | 1 |
| Normal distribution | 1 |
| Uniform and exponential distribution | 1 |
| Distributions of functions of a random variable | 1 |
| Sums/differences/scalar multiples of random variables, independent | |
| random variables, distributions of sums/differences of independent | 1 |
| random | |
| variables | |
| Central Limit Theorem | 1 |
| Normal approximation to the binomial distribution, distribution of the | 1 |
| sample mean | 1 |
| Distribution of sample proportion | 1 |
| Stochastic processes, Markov chains | 1 |
| Limiting behaviour of Markov chains | 1 |
| Statistics | No. of Lectures |
| Study design: bias, confounding, precision, comparison, control | 1 |
| Study design: observational studies vs designed experiments | 1 |
| Exploratory data analysis: describing and displaying categorical data | 1 |
| (tables, frequencies, bar chart) | 1 |
| Exploratory data analysis: describing and displaying univariate numeric | |
| data (dotplots, boxplots, histograms, mean, median, | 1 |
| quartiles/percentiles, standard deviation, variance, IQR) | |
| Exploratory data analysis: describing and displaying bivariate numeric data | 1 |
| (scatterplot, correlation) | <u>.</u> |

| Statistical modeling (single mean model, multiple means model, regression | 1 |
|---|---|
| model) | 1 |
| Sampling distributions: population vs sample, parameter vs statistic; | 1 |
| distribution of sample mean, proportion; standard error | 1 |
| Estimation: Confidence intervals, confidence interval for mean (using z), | 1 |
| confidence interval for mean using t | 1 |
| Estimation: confidence interval for difference in mean, confidence | 1 |
| intervals for proportion | 1 |
| Estimation: required sample size, confidence interval vs prediction interval | 1 |
| Theory of estimation: unbiasaed estimators, maximum likelihood | 1 |
| estimators | 1 |
| Hypothesis testing: concepts and terminology, testing a single mean | 1 |
| (z and t) | 1 |
| Hypothesis testing: errors, power, 2-sample test, paired test, testing | 1 |
| proportion | _ |
| Hypothesis testing: Non-parametric tests for 2 samples | 1 |
| Comparing multiple means: one-way ANOVA | 1 |
| Theory of ANOVA | 1 |
| Regresion: least squares method | 1 |
| Partitioning of variability in regression, significance testing in regression | 1 |
| Chi-squared test for independence | 1 |
| Chi-squared goodness-of-fit | 1 |
| | |

| PHY401: Electricity, Magnetism, Special Relativity and Optics - 4 Credits | | |
|---|-----------------|--|
| Electricity and Magnetism | No. of Lectures | |
| Coulomb's Law | | |
| Gauss's Law | | |
| Electric Field, Potential | | |
| Conductors, Insulators | | |
| Laplace equation | | |
| Curl and Stoke's theorem | 18 | |
| Capacitors, capacitance and energy stored in E field | | |
| Current and continuity equation | | |
| Magnetic field and Moving Charges | | |
| Force on Moving charges | | |
| Magnetic Field and vector potential | | |

| N. ALGEOGGGGGG, CONTROL CONTRO | 4 |
|--|-----------------|
| Fourier Optics: phase contrast imaging Microscopy applications | 1 |
| Fourier Optics: Apertures and imaging | 1 |
| Fourier Optics: Fraunhofer diffraction | 1 |
| Fourier Optics: Paraxial approximation | 1 |
| Fourier Optics: Fresnel diffraction integral | 1 |
| Fourier Optics: Huygens-Fresnel Principle | 1 |
| Classical optics: Fermat's Principle | 1 |
| Optics- Applications and microscopy | No. of Lectures |
| Nuclear reactions and thermonuclear power. | 1 |
| gravitational waves (qualitative) | |
| Einstein, the equivalence principle, gravity, gravitational lenses, | 1 |
| momentum. Centre of momentum frame. De Broglie waves and photons. | 2 |
| Relativistic dynamics. Mass-energy equivalence. Conservation of four- | |
| Twin paradox. | 2 |
| Relativistic kinematics; length contraction, time dilation. Doppler effect. | |
| Lorentz transformation. | 2 |
| Space-time and simultaneity. Einstein axioms for special relativity. The | No. of Lectures |
| Magnetism in Matter Special relativity | No. of Lectures |
| Magnetic Dipoles Magnetism in Matter | - |
| Dielectrics Magnetic Dipoles | - |
| Dielectrics and Electric Dipoles | - |
| Electromagnetic Waves | _ |
| Complete Maxwell's Equations | _ |
| Displacement current | |

| Course code | CHM401 | Chemistry-4 Structure and Properties | 4 Cr | edits |
|-------------|----------|--------------------------------------|------------------|---------|
| Core/Elec | tive/SBS | CORE PAPER | | |
| | | | abus sion | 2023-24 |
| | | | | |
| Unit:1 | | Stereochemistry & Group Theory | 0 | 08 L |

Molecular shape and simple electronic structure, Isomerism: Orbitals, hybridization and shapes of molecules, sterochemical consequences of tetrahedral carbon (isomers, enantiomers, R/S, D/L, optical rotation).

Stereochemistry – optical activity: Molecules with more than one chiral centre (diastereomers, meso compounds, separation of racemic mixtures).

Stereochemistry and Reactions: Prochirality, chirality in Nature, Sterochemistry on atoms other than carbon, Retrosynthetic analysis. Stereochemistry and Mechanism (nucleophilic substitution, elimination from non-cyclic compounds).

Alkene addition reactions – Hydrogenation, halogenation, HX addition. Elimination Reactions epoxide ring forming reactions.

Zeeman effect: Effect on the energies of a system by application of a magnetic field; Magneto chemistry, spin and orbital contribution to the magnetic moment.

Symmetry operations and elements, Group theory: Definition of reducible and irreducible representations, Use of group theory to determine the irreducible representation, Assignment of point groups, Leading to definition of components of character tables (irreducible representations, characters – at least the interpretation of the sign of the character)

Simple applications, Label molecular shapes, isomers, Identify chiral molecules, Physical properties -e.g. dipole moment, possible optical isomers, Orbital symmetry labels (e.g. s, p & d orbitals in Td, Oh, D4h).

| Unit:2 | Magnetic resonance spectroscopies | 08 L |
|-----------|---|-----------------|
| EDD anact | massany hymentine counting application to appenie medicals and to | transition mate |

EPR spectroscopy, hyperfine coupling application to organic radicals and to transition metal complexes.

Nuclear Magnetic Resonance (NMR), energies of nuclei in magnetic fields. Chemical shift and the δ scale, resonance of different nuclei, shielding, spin-orbit coupling and coupling constants, molecular symmetry. ¹³C NMR, ¹H NMR, integration, multiplicity, chemical shift typical ranges - Introduction to molecular spectroscopy and spectroscopic transitions, absorbance, transmittance, the Beer-Lambert Law, intensities of spectroscopic transitions.

Quantised vibration and simply harmonic oscillator model, wave functions, Molecular vibrational modes, vibrational spectroscopy infrared and Raman spectroscopy 3N-5, 3N-6 vibrational degrees of freedom.

| Unit:3 | Vibrational spectroscopy | 06 L |
|--------|--------------------------|------|
| | | |

Vibrational symmetry and IR/Raman activity: Symmetry properties of the vibrational degrees of freedom and to deduce IR, Raman activity. Use of internal coordinates to get symmetry properties of a subset of bands.

Vibrational spectroscopy: Local mode approximation. Characteristic infrared absorptions (alkyl CH, alcohol, amine RN H2 and R2NH, carboxylic acid, amide, ester, ketone, aldehyde, nitrile RCN, alkyne, alkene, aromatic), fingerprint regions, interpretation of IR spectra.

Molecular orbital theory: Electronic spectroscopy requires understanding of electronic structure leading to Molecular orbital theory – HOMO. LUMO. Diatomic molecules, LCAO-MO, Symmetry of MO's.

| Unit:4 | Photoelectron spectroscopy | 08 L |
|--------|----------------------------|------|

Generalisation of the application of MO approaches to polyatomic molecules. Hückel Theory-Aromatic and Heterocyclic Chemistry of compounds with delocalised p orbitals: Benzene and Aromaticity/Antiaromaticity, Reactions of Aromatic Compounds Electrophilic aromatic substitution. Reactions of Polycyclic and Heteroaromatic Compounds. Reactions via Aromatic Transition States Electrophilic aromatic substitution on naphthalene. Electrophilic aromatic substitution on heteroaromatics (*e.g.* pyridine and pyrrol). Non C-based aromatic systems.

Electronic spectroscopy: Chromophores and excited electronic states, electronic transitions, UV-Vis spectroscopy, Franck-Condon Principle, Franck-Condon factors - Fates of electronic excited states – fluorescence and phosphorescence, non- radiative transitions, internal conversion and intersystem crossing, fluorescence spectra.

Applications – light emitting polymers

1993.

Organic Chemistry by

| Unit:5 | Organometallic chemistry | 06 L |
|--------|--------------------------|------|
|--------|--------------------------|------|

Types and broad applications of organometallic complexes and catalysts. Ligand types and examples. Group 1 (LiR) and group 2 (Grignard) and p-block chemistries. EPR spectroscopy as a tool to probe electron distribution in carbocyclic and organometallic species. Covalent interactions in coordination compounds – rationalisation of spectrochemical series in terms of bonding interactions Binary metal carbonyl complexes Synergistic bonding and the 18-electron rule. IR and NMR spectroscopy. Substitution at metal carbonyl. Other organometallic ligand types and complexes thereof. Alkyne and alkene complexes *etc*. Redox reaction in organometallic chemistry. Hydrogen complexes and oxidative addition reactions. Reductive elimination reactions. Activation and reactions of organometallic ligands. Insertions, migrations.

Catalysis involving transition metals: Catalytic systems. Water gas shift reaction, hydrogenations, acetic acid process etc. Metallocene complexes and their chemistry leading to advanced polymerization catalysts etc.

Student Work Assignments, Tutorials Reviews of various research papers, reports, books Presentations Recommended Books/references OrganicChemistrybyJ.McMurray,7thEd.,Thomson,2008. PHY402: Physics Practical - 2 Credits

List of experiments

- 1. Verification of Stefan's Law by Electricalmethod.
- 2. Study of LR circuit.
- 3. Study of LCR circuit
- 4. To determine the self-inductance of the coil using Anderson's bridge and calculate the value of inductive reactance (XL) of the coil at a particular frequency.
- 5. Measurement of wavelength of Laser by DiffractionGrating.
- 6. To determine the Wavelength of main spectral line of mercury light using planetransmission grating.

CHM402: Chemistry Practical - 2 Credits

List of Physical chemistry experiments

(Any3)

- 1. Determination of the stability constant of a complex byspectrophotometry.
- 2 The reaction between potassium persulphate and potassium iodide bycolorimetry.
- **3.** Determine the formula and stability constant of a metal ion complex (Lead Oxalate) by polarography.
- **4.** Analysis of copper oxide and copper dioxide to determine law of multipleproportions.
- 5. Behaviour of water at different temperatures

List of Inorganic chemistry experiments (Any 3)

- 1. Photometric Analysis To study complex formation between Fe (III) and salicylic acid and find the formula and stability constant of the complex.
- 2. Simultaneous determination of Cr+2 andCu+2
- **3.** To determine the strength of given mixture of carbonate and bicarbonate in the given mixture by pH metric method.
- **4.** Determination of chemical oxygen demand(COD)
- 5. Determination of Biological oxygen demand(COD)

List of Organic chemistry experiments

(Any 3)

1. Organic Preparations: Double Stage

- 1. Glycine Hydantoic acid Hydantoin
- 2. Benzoin Benzil Benzilicacid
- 3. P-cresol 4,6-Dimethylcoumarin 3-Bromo-4,6 Dimethyl Coumarin
- **4.** Benzophenone Oxime –Benzanilide
- 5. Acetanilide p-Bromoacetanilide –p-Bromoaniline
- **6.** Hydroquinone Quinoline 1,2,4 –Triacetoxybenzene.

BIO402: Biology Practical - 2 Credits

List of Experiments (Any 6)

- 1. Create an artificial mesocosm (tub/tank of defined area), and inoculate with Lemna./Azolla sp. (brought from nearby habitats). Monitor growth, density and biomass over time.
- 2. a) Visit different types of water bodies (one river/stream and one quarry/pond/lake) and conduct sampling. Sampling methods (point count/line transect/quadrat) in field. Learn methods for estimating plant biomass (using GBH). (Field session)
- 3. Determination of population density in a natural community by quadrate method
- 4. Solving Genetic problems which obey Mendelian laws
- 5. Determination of linkage and cross-over analysis Problem solving
- 6. Sex linked Inheritance in drosophila problem solving
- 7. Analyze the Human karyotype chart for different genetic disorders
- 8. Use of ABO blood group data to calculate allele frequencies. (Data can be gathered both by interviews and by actual blood group determination)

VALUE ADDED 4: GENERAL AWARENESS (2 CREDITS)

Course code - 4FE Total Lecture Hours 18 Hours

Following are the areas which cover the various test items prescribed in the syllabus:

- 1. Verbal Aptitude
- 2. Numerical Aptitude
- 3. Abstract Reasoning
- 4. Tamil and Other Literature
- 5. General Science and Technology and Education
- **6.** Computer
- 7. Economics and Commerce
- **8.** Social Studies
- 9. Sports
- **10.** Current Affairs

| | ective/SBS | CORE PAPER | Syllabus 2023-24 Version | | | | |
| Core/El | ecuve/SBS | CORE PAPER | | | | | |
| Unit:1 | | 08 L | | | | | |
| Selectivity in organic synthesis - Chemo-selectivity, Regioselectivity, Stereo- and enantio-selectivity. Introduction of Pericyclic reaction - Electrocyclic, sigma tropic, cycloaddition, chelotropic and ene reactions, photochemical cycloaddition reactions, Diels-Alder reaction, Dipolar cycloadditions, retrocycloadditions, electrocyclic reactions. | | | | | | | |
| Unit:2 | C-C s | single/ double bond formation reactions | 0 | 08 L | | | |
| Hartwig, H reaction, W elimination | (Prilezhaev, Sharpless, Jacobsen), Metal catalyzed C-C bond formations (Ullmann, Buchwald-Hartwig, Heck, Suzuki, Stille reactions). Phospohorus, nitrogen and sulfur ylids, Wittig reaction, Wittig-Horner reaction, Mannich reaction, Peterson olefination, McMurry reaction, β-eliminations (Hoffman & ester pyrolysis), Cope elimination, mreduction of acetylenes. | | | | | | |
| Unit:3 | | Oxidation and reduction reactions | 0 | 08 L | | | |
| acids based), Sharpless asymmetric epoxidation, Jacobsen epoxidation, alkenes to diols (Manganese, Osmium- based), Sharpless asymmetric dihydroxylation, alkenes to carbonyls with bond cleavage (manganese, osmium, ruthenium and lead based-ozonolysis), alkenes to alcohols/carbonyls without bond cleavage (hydroboration-oxidation, chromium based allylic oxidation), ketones to α -hydroxy ketones, α,β -unsaturated ketones, Hydride reducing agents, Birch reduction, Catalytic Hydrogenation reaction, Carbonyl reduction reaction. | | | | | | | |
| (Manganese with bond alcohols/car oxidation), | e, Osmium- ba cleavage (man rbonyls withou ketones to α-h | asymmetric epoxidation, Jacobsen epoxidation ased), Sharpless asymmetric dihydroxylation, all ganese, osmium, ruthenium and lead based-ozoit bond cleavage (hydroboration-oxidation, chronydroxy ketones, α,β-unsaturated ketones, Hydric | , alkenes kenes to c nolysis), a mium base de reducin | carbonyls lkenes to ed allylic | | | |
| (Manganese with bond alcohols/car oxidation), | e, Osmium- ba cleavage (man rbonyls withou ketones to α-h | asymmetric epoxidation, Jacobsen epoxidation ased), Sharpless asymmetric dihydroxylation, all ganese, osmium, ruthenium and lead based-ozoit bond cleavage (hydroboration-oxidation, chronydroxy ketones, α,β-unsaturated ketones, Hydric | , alkenes kenes to o nolysis), a mium base de reducin ion. | to diols carbonyls lkenes to ed allylic | | | |
| (Manganese with bond alcohols/car oxidation), Birch reduction. Unit:4 Designing of convergent. | e, Osmium- ba cleavage (man rbonyls withou ketones to α-letion, Catalytic organic synthes synthesis. Di | asymmetric epoxidation, Jacobsen epoxidation ased), Sharpless asymmetric dihydroxylation, all ganese, osmium, ruthenium and lead based-ozor t bond cleavage (hydroboration-oxidation, chromydroxy ketones, α,β-unsaturated ketones, Hydric Hydrogenation reaction, Carbonyl reduction reaction | , alkenes kenes to conclusis), a mium basede reducing ion. Opproach, li-synthetic | to diols carbonyls lkenes to ed allylic g agents, 06 L inear and analysis, | | | |
| (Manganese with bond alcohols/car oxidation), Birch reduction. Unit:4 Designing of convergent. | e, Osmium- ba cleavage (man rbonyls withou ketones to α-letion, Catalytic organic synthes synthesis. Di | asymmetric epoxidation, Jacobsen epoxidation ased), Sharpless asymmetric dihydroxylation, all ganese, osmium, ruthenium and lead based-ozor t bond cleavage (hydroboration-oxidation, chromydroxy ketones, α,β-unsaturated ketones, Hydric Hydrogenation reaction, Carbonyl reduction reaction. Target oriented synthesis sis, Retrosynthetic analysis, and disconnection appreciately oriented synthesis: concept of forward-oversity-oriented synthesis: concept of forward-oversity-oriented synthesis: concept of forward-oversity-oriented synthesis: | , alkenes kenes to conolysis), a mium base de reducin ion. Opproach, liesynthetic and divers | to diols carbonyls lkenes to ed allylic g agents, 06 L inear and analysis, | | | |
| with bond alcohols/car oxidation), Birch reduction. Unit:4 Designing of convergent appendage of Unit:5 Use of chir industrially | e, Osmium- bacleavage (man rbonyls without ketones to α-hetion, Catalytic organic synthese syntheses. Didiversity, skeletal auxiliaries, a important sugar | asymmetric epoxidation, Jacobsen epoxidation ased), Sharpless asymmetric dihydroxylation, all ganese, osmium, ruthenium and lead based-ozor t bond cleavage (hydroboration-oxidation, chronaydroxy ketones, α,β-unsaturated ketones, Hydric Hydrogenation reaction, Carbonyl reduction reaction. Target oriented synthesis sis, Retrosynthetic analysis, and disconnection appreciated synthesis: concept of forward-tal diversity, stereochemical diversity, complexity | , alkenes kenes to o nolysis), a mium base de reducin ion. Opproach, li-synthetic and divers otherwise of the synthetic of | to diols carbonyls lkenes to ed allylic g agents, 06 L inear and analysis, sity. 06 L thesis of | | | |
| with bond alcohols/car oxidation), Birch reduction. Unit:4 Designing of convergent appendage of Unit:5 Use of chir industrially compounds | e, Osmium- bacleavage (man rbonyls without ketones to α-hetion, Catalytic organic synthesis. Didiversity, skele al auxiliaries, a important sugal and bio-based | asymmetric epoxidation, Jacobsen epoxidation ased), Sharpless asymmetric dihydroxylation, all ganese, osmium, ruthenium and lead based-ozor t bond cleavage (hydroboration-oxidation, chromydroxy ketones, α,β-unsaturated ketones, Hydric Hydrogenation reaction, Carbonyl reduction reaction. Target oriented synthesis sis, Retrosynthetic analysis, and disconnection approach synthesis: concept of forward-tal diversity, stereochemical diversity, complexity. Asymmetric Synthesis chiron approach. Principles and use of enzymes ar / fatty acid esters, sugar nucleotide derivatives; platform chemicals. Student Work | , alkenes kenes to o nolysis), a mium base de reducin ion. Opproach, li-synthetic and divers otherwise of the synthetic of | to diols carbonyls lkenes to ed allylic g agents, 06 L inear and analysis, sity. 06 L thesis of | | | |
| with bond alcohols/car oxidation), Birch reduction. Unit:4 Designing of convergent appendage of the convergent industrially compounds Assignment Review | e, Osmium- bacleavage (man rbonyls without ketones to α-hetion, Catalytic organic synthese synthesis. Didiversity, skeletal auxiliaries, a important sugar and bio-based ments, Tutorialses of various reservations. | asymmetric epoxidation, Jacobsen epoxidation ased), Sharpless asymmetric dihydroxylation, all ganese, osmium, ruthenium and lead based-ozor t bond cleavage (hydroboration-oxidation, chromydroxy ketones, α,β-unsaturated ketones, Hydric Hydrogenation reaction, Carbonyl reduction reaction. Target oriented synthesis sis, Retrosynthetic analysis, and disconnection approach synthesis: concept of forward-tal diversity, stereochemical diversity, complexity. Asymmetric Synthesis chiron approach. Principles and use of enzymes ar / fatty acid esters, sugar nucleotide derivatives; platform chemicals. | Course Co | ode CHM504 | Introduction to analytical chemistry | 4 Credits | | |
|-----------|-------------|---|-----------|------------------|---------|
| Core/E | lective/SBS | CORE PAPER | | | |
| | | | - | llabus ersion | 2023-24 |
| Unit:1 | I | Sundamentals of Analytical Methods | | C |)6 L |

Statistics and chemo-metrics: statistical calculations, confidence limits, tests of significance, correlation coefficient, propagation of error; sampling methods: representative samples, automation of sampling and sample treatment; experimental design; quality control and assurance, volumetric and gravimetric methods; quantitative aspects of colorimetry; theory of different types of titrations: acid-base, precipitation, redox, complexometric, nonaqueous, etc.; Introduction to analytical sensors; automated method of analysis; continuous flow methods; flow injection analysis; kinetic methods of analysis; miscellaneous methods: turbidimetry, refractometry, polarimetry, optical rotatory dispersion and circular dichroism.

Introduction, electrochemical cells, types of electrodes, classifications of electroanalytical methods. Analytical applications of two-electrode systems: conductometry and potentiometry; controlled potential techniques: constant potential (e.g., amperometry), potential step (e.g., pulse techniques), and potential sweep methods (e.g., cyclic voltammetry); electrogravimetry, electrophoresis, electrosynthesis, coulometry, flow electrolysis, thin-layer electrochemistry; electrochemical sensors; electrochemical technology.

| | Unit:3 | Environmental Analytical Chemistry | 06 L |
|---|--------|------------------------------------|------|
| ı | | | 1 |

Sampling of air, water and soil for chemical analysis; monitoring techniques of air pollutants, air quality standards, pollutants standards index (PSI), monitoring of volatile organic compounds; water pollution: water quality parameters and their determination, algal blooms and algal toxins, monitoring pesticide residues in water and soil, water treatment: municipal water treatment, waste water treatment methods.

| Unit:4 Analytical Biochemistry 06 L |
|-------------------------------------|
|-------------------------------------|

Body fluids

Composition of body fluids and detection of abnormal levels of certain constituents leading to diagnosis of disease. Physiological and nutritional significance of water and fat soluble vitamins and minerals. Analysis for constituents of physiological fluids, viz., urine, blood, serum. Analytical techniques for vitamins including microbiological techniques.

Immunological Methods

General processes of immune response, Antigen-antibody reactions, precipitation reactions, and radio, enzyme, and fluoro-immuno assays. Human nutrition: Biological values and estimation of enzymes, carbohydrates, essential amino acids, proteins, and lipids.

| Unit:5 | Spectral Methods | | | | | 10 L | | |
|-----------|------------------|------|------|---------------|-------|---------------|---------|----------|
| Infra-red | spectroscopy, | NMR, | Mass | spectroscopy, | Raman | spectroscopy, | Isotope | dilution |

method and activation analysis, radiometric and radio-release methods Auto, X-ray and gamma radiography, Principle, Instrumentation and applications of: Differential Thermal Analysis, Differential Scanning Calorimetry, Thermometric titrations, Evolved gas analysis, HYPHENATED TECHNIQUES: Need for hyphenation, Interfacing devices and applications of GC - MS, GC - IR, MS-MS, HPLC - MS, ICP - MS, ICP - OES.

|--------------------|----------|--|---------------------|---------|
| Core/Elect | tive/SBS | ELECTIVE PAPER-2 | | |
| | | | Syllabus Version | 2023-24 |

Unit:1 History and development of Forensic Science 06 L

Historical aspects of forensic science, Definitions and concepts of forensic science, Need of Forensic Science, Basic Principles of Forensic Science, Scope of development of forensic science. Functions of Forensic Science, Different branches of Forensic Science. Frye case and Daubert standard. Scope and development of forensic science.

Unit:2 Legal aspects of crime 03 L

Crime – Introduction Natures, causes and consequences of crime, Broad concepts of criminal Justice system, Procedures involved in the detection of crime, Filing of criminal charges, Indian police system – The Police Act, Human rights and criminal justice system in India. Set up of INTERPOL. Duties and qualification of forensic science.

Unit:3 Organizational set up of FSL in India 03 L

Hierarchical set up of central forensic science laboratory, Hierarchical set up state forensic science laboratory, Government examiners of questioned documents. Chemical examiners laboratory, Finger print bureaus, National crime records bureau, Bureau of police research and development, Mobile crime laboratory, Duties of forensic scientist, code of conduct of forensic scientists. Drug enforcement administrator. Defense research and development organization.

Unit:4 Forensic Chemistry 08 L

Petroleum and Petroleum Products: Distillation and fractionation of petroleum. Commercial uses of different petroleum fractions. Analysis of petroleum products. Analysis of traces of petroleum products in forensic exhibits. Comparison of petroleum products. Adulteration of petroleum products.

Cases Involving Arson: Chemistry of fire. Conditions for fire. Fire scene patterns. Location of point of ignition. Recognition of type of fire. Searching the fire scene. Collection and preservation of arson evidence. Analysis of fire debris. Analysis of ignitable liquid residue. Post-flashover burning. Scientific investigation and evaluation of clue materials. Information from smoke staining.

Explosives: Classification of explosives – low explosives and high explosives. Homemade explosives. Military explosives. Blasting agents. Synthesis and characteristics of TNT, PETN

and RDX. Explosion process. Blast waves. Bomb scene management. Searching the scene of explosion. Mechanism of explosion. Post blast residue collection and analysis. Blast injuries. Detection of hidden explosives

| Unit:5 | Forensic Biology | 04 L |
|--------|------------------|------|
| | | |

Nature and importance of biological evidence. Significance of hair evidence. Transfer, persistence and recovery of hair evidence. Structure of human hair. Comparison of hair samples. Morphology and biochemistry of human hair. Comparison of human and animal hair. Types and identification of microbial organisms of forensic significance. Identification of wood, leaves, pollens and juices as botanical evidence. Diatoms and their forensic significance.

CHM 509 – Project/ Dissertation - – 2 Credits

Project-based learning offers an opportunity to the students to work independently under guidance of a supervisor. Students will be assigned to the on campus faculty/ research scientists from various national research institutes such as NCL/ IISER/ working in chemistry research; under whose guidance he or she would work on a problem keeping the focus to enhance their own ability to critical thinking, identification of research problems and research gaps, formulate research objectives, formulation of research plan, and problem solving via execution of specific experiments, and develop specialized skills to handle specific problems. This would train the students to nurture their creativity and innovative ideas, collaboration/teamwork and leadership, communications, learning self-reliance and project management.

Adequate assessment requirements for individual marking are presentations with discussions and seminars on the working process and the results.

SEMESTER VI

| Course code | CHM601 | Solid State chemistry & its Applications | 4 Cre | edits |
|-------------------|--------|--|----------|---------|
| Core/Elective/SBS | | CORE PAPER | | |
| | | | Syllabus | 2023-24 |
| | | | Version | |
| | | | | |

| Unit:1 | Fundamentals | 10 L |
|-----------|-----------------|------|
| C 11101 1 | 1 difddiffering | 101 |

Types of solids - close packing of atoms and ions - bcc, fcc and hcp voids —Gold schmidt radius ratio - derivation - its influence on structures - structures of rock salt -cesium chloride - wurtzite - zinc blende - rutile - fluroite - antifluorite - diamond and graphite-spinel - normal and inverse spinels and perovskite - lattice energy of ionic crystals -Madelung constant - Born-Haber cycle and its applications. **Theories -** Band theory of solids. Free electron Theory, zone theory, MO theory of Solids dislocation in solids: Schottky and Frenkel defects. Line defects and plane defects — nonstoichiometric compounds. Electrical properties: Energy bands, insulators, semiconductors and conductors- super conductors-dielectric properties, piezo-electricity, ferro electricity- conductivity in pure metals. Superconductivity: Occurrence, BCS theory, high temperature super conductors- introduction to nanoparticles- metal nanoparticles-particle size determination.

Theory- the crystal systems and Bravais lattices - Miller indices and labeling of planes - symmetry properties - crystallographic point groups and space groups - X-ray diffraction - powder and rotating crystal methods - systematic absences and determination of lattice types - analysis of X-ray data for cubic system - structure factor and Fourier synthesis -Fundamentals of electron and neutron diffraction.

| Unit:3 | Chemistry of Nanostructure Materials | 09 L |
|--------|--------------------------------------|------|

Introduction; fundamentals of nanomaterials science, surface science for nanomaterials, colloidal chemistry; Synthesis, preparation and fabrication: chemical routes, self-assembly methods, biomimetic and electrochemical approaches; Size controls properties (optical, electronic and magnetic properties of materials) - Applications (carbon nanotubes and nanoporous zeolites; Quantum Dots, basic ideas of nano devices).

Introduction to nanoscience and nanotechnology - Underlying physical principles of nanotechnology: Nanostructured Materials: Size is Everything. Fundamental physicochemical principles - size dependence of the properties of nanostructured matter -quantum confinement, single electron charging, the central importance of nanoscale morphology. Societal aspects of nanotechnology: Health, environment, hype and reality. The advent of the nanomaterial. Top down and bottom-up approaches to building materials. Properties of nanomaterials such as

nanoparticles, carbon nanotubes. Overview of self-assembly. Inert gas condensation, arc discharge, RF plasma, plasma arc technique, ion sputtering, laser ablation, laser pyrolysis, ball milling, molecular beam epitaxy, chemical vapour deposition method and electro deposition.

Unit:4 The basic tools of nanotechnology 05 L

Scanning electron microscopy (SEM), TEM and EDAX analysis and X-ray diffraction, A brief historical overview of atomic force microscopy (AFM) and an introduction to its basic principles& applications. Optical microscope and their description, operational principle and application for analysis of nanomaterials, UV-Vis-IR spectrophotometers, Principle of operation and application for band gap measurement.

| Unit:5 | Metal nanoparticles & | 08 L |
|--------|----------------------------|------|
| | Carbon based Nanomaterials | |

Metal nanoparticles - Size control of metal nanoparticles and their characterization, study of their properties- optical, electronic, and magnetic. Surface plasmon band and its applications, role in catalysis, alloy nano particles, stabilization in sol, glass, and other media, change of band gap, blueshift, colour change in sol, glass, and composites, Plasmon resonance

Carbon based Nanomaterials - Introduction. Fullerenes, C60, C80 and C240 nanostructures. Properties & applications (mechanical, optical and electrical). Functionalization of carbon nanotubes, reactivity of carbon nanotubes. Nano-sensors: Temperature sensors, smoke sensors, sensors for aerospace and defence. Accelerometer, pressure sensor, night vision system, nano tweezers, nano-cutting tools, integration of sensor with actuators and electronic circuitry biosensors.

| CORE PAPER | |
| | 2023-24 |
| | CORE PAPER Syllabus Version |

Unit:1

Metal ligands in biological system

09 L

- Amino acid side chains, specialized ligands, porphyrins, enterobactin, etc.,
- > Availability of Fe, Cu and Zn
- > Uptake of Fe, gut, transferrin and ferritin
- oxygen transport
- > Zn- source of nucleophilic-OH, Cu-essential but toxic
- > photosynthesis-chlorophyll reaction centre and oxygen evolving centre

Unit:2

Theories of coordination compounds

09 L

VB theory - CFT - splitting of d orbitals in ligand fields and different symmetries - CFSE - factors affecting the magnitude of 10 Dq - evidence for crystal field stabilization - spectrochemical series - site selection in spinels - tetragonal distortion from octahedral symmetry - Jahn-Teller distortion - Nephelauxetic effect - MO theory - octahedral - tetrahedral and square planar complexes-bonding and molecular orbital theory - experimental evidence for -bonding.

| Unit:3 | Reactions | 12 L |
|---------|-----------|------|
| CILICIO | 1 Cucuono | 1-1 |

Substitution reactions in square planar complexes - the rate law for nucleophilic substitution in a square planar complex - the trans effect - theories of trans effect - mechanism of nucleophilic substitution in square planar complexes - kinetics of octahedral substitution - ligand field effects and reaction rates - mechanism of substitution in octahedral complexes - reaction rates influenced by acid and bases - racemization and isomerization - mechanisms of redox reactions - outer sphere mechanisms - excited state outer sphere electron transfer reactions - inner sphere mechanisms - mixed valent complexes.

| Unit:4 | Electronic spectra and magnetism | 06 L |
|--------|----------------------------------|-------|
| C | | ~ ~ ~ |

Microstates, terms and energy levels for d1-d9 ions in cubic and square fields - selection rules - band intensities and band widths - Orgel and Tanabe-Sugano diagrams - evaluation of 10 Dq and β for octahedral complexes of cobalt and nickel - charge transfer spectra -magnetic properties of coordination compounds - change in magnetic properties of complexes in terms of spin orbit coupling - temperature independent paramagnetism - spin cross over phenomena.

Structure - Structure of coordination compounds with reference to the existence of various coordination numbers (2, 3, 4, 5 & 6) - site preferences - isomerism - trigonal prism - absolute configuration of complexes - stereo selectivity and conformation of chelate rings - coordination number seven and eight. Spectral and magnetic properties of lanthanide and actinide complexes.

Unit:5 IR, Raman and EPR spectroscopy 06 L

Structural elucidation of simple molecules like N_2O , ClF_3 , NO_3^- , and ClO_4^- - effect of coordination on ligand vibrations - uses of group vibrations in the structural elucidation of metal complexes of urea, thiourea, cyanide, thiocyanate, nitrate, sulphate and DMSO - effect of isotopic substitution on the vibrational spectra of molecules - applications of Raman spectroscopy.

EPR - theory and instrumentation, spin Hamiltonian, isotropic and anisotropic EPR spectra, magic pentagon rule, applications of EPR spectroscopy (i) in structure determination of coordination complexes and (ii) metalloproteins (Fe and Cu).

|-------------|----------|--|---------------------|---------|
| Core/Elect | tive/SBS | CORE PAPER | | |
| | | | Syllabus Version | 2023-24 |

Unit:1 Classification of natural products 05 L

Chemical structure, classification, structure elucidation based on degradative reactions-Isolation and structural elucidation of selected alkaloids and terpenes- quinine, morphine, and reserpine, citral, juvabione and logiofolene –Insect pheromones.

Unit:2 Amino Acids, Peptides and Proteins 05 L

Classification of Amino Acids, Zwitterion structure and Isoelectric point. Synthesis of amino acids-reactions - properties- Amino Acids in Nature: - Amino Acids and their Metabolites in Nature –Structure of proteins- Peptides.

Unit:3 Steroids & Carbohydrates 10 L

Steroids - Classification- Synthesis and structure elucidation of cholesterol, conversion of cholesterol to progesterone- aldosterone and testosterone-cortisone- Vitamin D - Nucleic Acids- structure of nucleosides and nucleotides-RNA and DNA, Watsons and Crick model DNA-drug interaction.

Carbohydrates- Classification of carbohydrates, reducing and non-reducing sugars, General properties of glucose and fructose, their open chain structure. Epimers, muta-rotation and anomers. Determination of configuration- Hudson's rules-Structure of sugars transformation of sugars, Preparation of alditols, glycosides, deoxysugars. Synthesis of vitamin C from glucose.

| Unit:4 | Heterocycles | 08 L |
|--------|--------------|------|
|--------|--------------|------|

Synthesis, Properties and uses of Five membered heterocyclic ring systems with one or two hetero atoms-Furan, pyrrole, thiophene and thiazole: six membered heterocyclic ring system-Pyridine. Fused heterocyclic ring systems- Indole, quinoline. Biologically important heterocycles: Pyrimidines and purines

| Unit:5 New materials derived from heterocycles 08 L |
|---|
|---|

Syntheses of cyanines and related dyes. Organic sensitizers for DSSC, electron & nors and acceptors for organic solar cells, optical chemo-sensors and organic semiconductors for thin-film transistors.

EVSB 609 - Project/ Dissertation - 2 Credits

Project-based learning offers an opportunity to the students to work independently under guidance of a supervisor. Students will be assigned to the on campus faculty/ research scientists from various national research institutes such as NCL/ IISER/ working in chemistry research; under whose guidance he or she would work on a problem keeping the focus to enhance their own ability to critical thinking, identification of research problems and research gaps, formulate research objectives, formulation of research plan, and problem solving via execution of specific experiments, and develop specialized skills to handle specific problems. This would train the students to nurture their creativity and innovative ideas, collaboration/teamwork and leadership, communications, learning self-reliance and project management.

Adequate assessment requirements for individual marking are presentations with discussions and seminars on the working process and the results.

Summer training / Internship -

Even though summer training/internship is not mandatory and not a part of curriculum; students will be encouraged to work as summer trainee or interns in other institutes/ laboratories/ industries depending upon the scopes and availability during summer/winter recess.

After the period of training, it is expected that students achieve the following:

- Recognize the duties, responsibilities and ethics at a professional position.
- Ability to apply knowledge learned to solve specific problems in relevant domain of science.
- Gain exposure and practical experience in the relevant field.
- Ability to prepare technical reports for the training.
- Ability to communicate effectively in the work environment.
