B. Sc. Electronics and Communication Systems

Syllabus

AFFILIATED COLLEGES

Program Code: 26B

2023 - 2024

BHARATHIAR UNIVERSITY

(A State University, Accredited with "A" Grade by NAAC, Ranked 13th among Indian Universities by MHRD-NIRF,

World Ranking: Times -801-1000, Shanghai -901-1000, URAP - 982)

Program	Program Educational Objectives (PEOs)							
program	The B. Sc. ELECTRONICS AND COMMUNICATION SYSTEMS program describe accomplishments that graduates are expected to attain within five to seven years after graduation							
PEO1	Provide graduates with a strong foundation in Electronics domain and to enable them to devise and deliver efficient solutions to challenging problems in Electronics, Communications and allied disciplines.							
PEO2	Impart analytic and thinking skills to develop initiatives and innovative ideas for R&D, Industry and societal requirements.							
PEO3	Provide sound theoretical and practical knowledge of Electronics, managerial and entrepreneurial skills to enable students to contribute to the wellbeing of society with a global outlook.							
PEO4	Inculcate qualities of teamwork as well as social, interpersonal and leadership skills and an ability to adapt to evolving professional environments in the domains of engineering and technology.							
PEO5	Motivate graduates to become good human beings and responsible citizens for the overall welfare of the society.							
PEO6	Develop attitude in lifelong learning, applying and adapting new ideas and technologies as their field evolves.							
PEO7	To prepare graduates who will have knowledge, ability and courage to pursue higher studies and research.							

Program	Program Specific Outcomes (PSOs)							
	After the successful completion of B.Sc. ELECTRONICS AND COMMUNICATION SYSTEMS program, the students are expected to							
PSO1 Demonstrate proficiency in use of software and hardware required to practice electronics and communication profession.								
PSO2	Graduates will be able to apply fundamentals of electronics in various domains of analog and digital systems							
PSO3	Apprehend and analyze specific engineering problems of communication, electronic circuits, computer programming, embedded systems, VLSI design and semiconductor technology by applying the knowledge of basic sciences, engineering mathematics and engineering fundamentals.							
PSO4	Ability to communicate effectively with excellent interpersonal skills and demonstrate the practice of professional ethics for societal benefit							
PSO5	Graduates will be able to apply fundamentals of electronics in various domains of analog and digital systems.							
PSO6	Use embedded system concepts for developing IoT applications							

Program	Outcomes (POs)						
	On successful completion of the B.Sc. ELECTRONICS AND COMMUNICATION SYSTEMS program						
PO1	Engineering knowledge: Apply the knowledge of mathematics, Science, Engineering fundamentals, and an engineering specialization to the solution of complex engineering problems						
PO2	Problem analysis: Identify, formulate, review research literature and analyze complex engineering problems reaching substantiated conclusion using principles of mathematics and Engineering sciences						
PO3	Design/Development of solutions: Design solutions for complex Engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal and environmental conditions.						
PO4	Conduct investigation of complex problems: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.						
PO5	Modern tool usage: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations						
PO6	The engineer and society: Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.						
PO7	Environment and Sustainability: Understand the impact of the professional engineering solution in societal and environmental contexts, and demonstrate the knowledge of and need fire sustainable development						
PO8	Ethics: Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.						
PO9	Individual and team work: Function effectively as an individual, an as a member or leader in diverse teams, and in multidisciplinary settings.						
PO10	Life-Long learning: Recognize the need for and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.						

BHARATHIAR UNIVERSITY: COIMBATORE 641 046 B.Sc. Electronics and Communication Systems Curriculum

Core Practical - I			3		P	4
Pre-req	uisite	Higher secondary Physics	Sylla Vers		202 202	

Course Objectives:

The main objectives of this course are to:

- 1. To understand the fundamental principles of circuit theory
- 2. To make use of circuit laws and theorems and measuring the circuit parameters.

Expected Course Outcomes:

On the successful completion of the course, student will be able to:

011		
1	Apply the concept of basic circuit and theorems	K3
	Simplify the circuits using series and parallel equivalents and using Thevenin's and Norton's equivalent circuits.	К3
3	Design resonance circuits.	K4
4	Use the oscilloscope for the display and measurements of signals.	K2
5	Apply the electronic components in network theorems.	К3

K1 - Remember; K2 - Understand; K3 - Apply; K4 - Analyze; K5 - Evaluate; K6 - Create

ANY 16 EXPERIMENTS

- 1. Study of Multimeter Checking of Components
- 2. Measurement of Amplitude, Frequency & Phase Difference using CRO
- 3. Verification of Ohm's Law
- 4. Voltage sources in Series, Parallel and Series-Parallel
- 5. Resistance in Series, Parallel and Series-Parallel
- 6. Voltage and Current Dividers
- 7. Verification of Kirchoff's Law
- 8. Wheatstone Bridge
- 9. Verification of Norton's Theorem
- 10. Verification of Thevenin's Theorem
- 11. Verification of Millman's Theorem
- 12. Verification of Superposition Theorem
- 13. LCR Bridge
- 14. Series Resonance Circuit
- 15. Parallel Resonance Circuit
- 16. Transient Response of RC Circuit
- 17. Transient Response of RL Circuit
- 18. Capacitors & Inductors in Series & Parallel
- 19. Frequency Response of R, L&C
- 20. Low Pass Filter & High Pass Filter
- 21. Band pass and Band Rejection Filter
- 22. Verification of Maximum Power Transfer Theorem

23. Measurement of resistance and capacitance in series and parallel

Course Designed By: K.Manikantan , Assistant Professor, Government Arts College ,Ooty& Dr.N Om Muruga , Assistant Professor, Government Arts College,Ooty

Course Objectives:

The main objectives of this course are to:

- 1. To understand and experiment the basic parameters of electronic devices.
- 2 To construct few applications using semiconductor devices.

Expected Course Outcomes:

On the successful completion of the course, student will be able to

On	the successful completion of the course, student will be able to:	
1	Experiment the fundamental operations of the main semiconductor electronic devices.	К3
2	Design and construct electronic circuits using semiconductor devices.	K3
3	Understand the transistor characteristics	K2
4	Understand the characteristics of LDR and solar cell	K2
5	Use the special diodes for various applications	К3

K1 - Remember; K2 - Understand; K3 - Apply; K4 - Analyze; K5 - Evaluate; K6 - Create

ANY 16 EXPERIMENTS

- 1. Band Gap Energy of Silicon / Germanium Diode
- 2. V-I Characteristics of Junction Diode
- 3. V-I Characteristics of Zener Diode
- 4. Transistor Characteristics of CE Configuration
- 5. Transistor Characteristics of CB Configuration
- 6. Transistor Characteristics of CC Configuration
- 7. Clipping Circuits
- 8. Clamping Circuits
- 9. Measurement of Stability Factor of Fixed Bias
- 10. Measurement of Stability Factor of Self Bias
- 11. V-I Characteristics of JFET
- 12. V-I Characteristics of UJT
- 13. UJT as Oscillator
- 14. FET as Voltage Variable Resistor(VVR)
- 15. Characteristics of LDR
- 16. Characteristics of Solar Cell
- 17. Study of IR (Tx & Rx)
- 18. Study of LED and 7Segmentdisplay
- 19. Temperature Co-efficient of Junction Diode
- 20. Zener as a Voltage regulator
- 21. ON / OFF control of relay using Opto-Couplers
- 22. Characteristics of SCR
- 23. TRIAC Characteristics

Core /Elective /		Core Practical IV	3		P	4
Supportive:						
Pre-Requisite:	F	BASIC ELECTRONICS LAB				
			Ver	sion	2024	

Course Objectives:

The Main Objectives of this course are to:

- ❖ To understand the concept of working of regulated power supplies, rectifiers, amplifiers and oscillators.
- To experiment the modulation and detection techniques.

Expected Course Outcomes:

On the Successful completion of the course, student will be able to:

1	Design power supply and rectifier circuits	K6
2	Design Amplifier circuits	K6
3	Design different Oscillator circuits	K6
4	Design different Instrumentation circuits	K6
5	Design circuits with Transducers	K6

K1:Remember; K2-Understand; K3-Apply; K4-Analyze; K5-Evaluate; K6-Create

(Any 16 Experiments)

- 1. DC Regulated Power Supply using Zener Diode
- 2. Voltage Doubler
- 3. Feedback Amplifier
- 4. Emitter Follower
- 5. Transformer Coupled Amplifier
- 6. Hartley Oscillator
- 7. Colpitts Oscillator
- 8. Phase shift Oscillator
- 9. Wein Bridge Oscillator
- 10. RC Coupled Amplifier
- 11. Half Wave and Full Wave Rectifier
- 12. Filter Circuits
- 13. Voltage to Current Converter
- 14. Current to Voltage Converter
- 15. Characteristics of Piezoelectric Transducer
- 16. Summing Amplifier

Course code	43R	C++ PROGRAMMING LAB	L	T	P	C
Core Practica	l V		2		P	2
Pre-requisite		Basic computer skills and familiarity with	Syllabus 2023			-
		Microsoft Windows.	Versi	on 2	2024	

Course Objectives:

The main objectives of this course are to:

- 1. Impart knowledge of object-oriented programming concepts and implement them in C++
- 2. Enable to differentiate procedure oriented and object-oriented concepts.
- 3. Equip with the knowledge of concept of Inheritance so that learner understands the need of inheritance.
- 4. Explain the importance of data hiding in object-oriented programming.

Expected Course Outcomes:

On the successful completion of the course, student will be able to:

	r · · · · · · · · · · · · · · · · · · ·	
1	Define the different programming paradigm such as procedure oriented and object-oriented programming methodology and conceptualize elements of OO methodology	K1
2	Illustrate and model real world objects and map it into programming objects for a legacy system.	K2
3	Identify the concepts of inheritance and its types and develop applications using overloading features.	К3
4	Discover the usage of pointers with classes.	K4
5	Explain the usage of Files, templates and understand the importance of exception Handling.	K5

K1 - Remember; K2 - Understand; K3 - Apply; K4 - Analyze; K5 - Evaluate; K6 - Create

Programs 36 hours

- 1. Create a class to implement the data structure STACK. Write a constructor to initialize the TOP of the stack to 0. Write a member function POP() to delete an element. Check for overflow and underflow conditions.
- 2. Create a class ARITH which consists of a FLOAT and an integer Variable. Write member ADD(), SUB (), MUL(), DIV(), MOD() to perform addition, multiplication, division and modulus respectively. Write member functions to get and display values.
- 3. Create a class MAT has a 2-d matrix and R&C represents the rows and columns of the matrix . Overload the operators +, -, * to add subtract and multiply two matrices. Write member functions to get and display MAT object values.
- 4. Create a class STRING. Write member function to initialize, get and display strings. Overload the operator + to concatenate two strings, = = to compare two strings and a member function to find the length of the string.
- 5. Create a class which consists of EMPLOYEE detail like employee number, employee name, dept, basic-salary, grade. Write member functions to get and display them. Derive a class PAY from the above class and write a member function to calculate da, hra, pf depending on the grade and Display the Payslip in a neat format using console I/O.

- 6. Create a class SHAPE which consist of two VIRTUAL FUNCTIONS Cal_Area() and Cal_PERI to calculate AREA and PERIMETER of various figures. Derive three classes SQUARE,RECTANGLE and TRIANGLE from the class SHAPE and calculate AREA and PERIMETER of each class separately and Display the result.
- 7. Create two classes which consists of two private variables, one float And one integer variables in each class. Write member functions to get and display them. Write FRIEND function common to arguments. And the integer and float values of both the objects separately and Display the result.
- 8. Write a user defined function USERFUN() which has the formatting commands like setw(), showpoint, showpos precision(). Write a program which prints an multiplication table and uses USERFUN() for formatting.
- 9. Write a program to perform Insertion, Deletion and Updation using files.
- 10. Write a program which takes a file as argument and copies in to another file with line numbers using Command Line Arguments.

Core VI			6	T		4
Pre-requisite	e	Digital	Syllab	us 2	2023	_
		Electronics,	Versi	on 2	2024	
		8085				
		Microprocessor				
C 01:	4.	Microprocessor				

Course Objectives:

The main objectives of this course are to:

- 1. Study the architecture and addressing modes of 8051.
- 2. Impart knowledge about assembly language programs of 8051.
- 3. Helps to understand the importance of different peripheral devices & their interfacing to 8051.
- 4. Impart knowledge of different types of external interfaces including LEDS, LCD, keypad Matrix, Switches & Seven segment display.

On the successful completion of the course, student will be able to:

1	Describe architecture and operation of Microcontroller 8051.	K1
2	Foster ability to understand the design concept of Microcontroller.	K2
3	Design various applications using its peripherals.	K3
4	Analyze the data transfer through serial and parallel ports.	K4
5	Learn basic hardware of various microcontrollers.	K2
6	Foster ability to understand the role of embedded systems in industry	K6

K1 - Remember; K2 - Understand; K3 - Apply; K4 - Analyze; K5 - Evaluate; K6 - Create

Overview and Instruction Set 14—hours

Microcontrollers and Embedded Processors – Microcontrollers for Embedded Systems – Overview of 8051 Family – 8051 Instruction Set and Registers.

Assembly Programming and Addressing Modes Unit:2 15—hours

Introduction to 8051 Assembly Programming—The Program Counter and ROM—Data Types and Directives—Flag Bits and PSW Register—Register Bank and Stack—Loop and Jump Instructions I/O Port Programming – Addressing Modes.

Arithmetic and Logical Operations In AIP and C Unit:3 14—hours

Arithmetic Instructions and Programs - Unsigned Addition and Subtraction and Unsigned Multiplication and Division - Logic Instructions and Programs - Single Bit Instructions and Programming. Programming with C: Data Types–Time Delay Programming–I/O Programming Logic Operations Arithmetic Operations

Unit:4 **8051 Interrupts and Peripherals** 14—hours

Basic Registers of Timer – Programming 8051 Timer – Counter Programming – Basics of Serial Communication-8051 Connection to RS232-8051 Serial Communication Programming - 8051 Interrupts – Programming External Hardware Interrupts

Unit:5	Real World Applications	15—hours
	CD to the 8051–Interfacing ADC–Interfacing Sensors to 8051–I	nterfacing Stepper Motor
- 8051 Inter	Facing to the Keyboard – Interfacing DAC to the 8051

Course Objectives:

The main objectives of this course are to:

- 1. To make the students to design triggering circuits of SCR.
- 2. To understand the characteristics of power electronic devices.

Expected Course Outcomes:

On the successful completion of the course, student will be able to:

Oii	the successful completion of the course, student will be able to.	
1	Design triggering circuits of SCR	K2
2	Understand the characteristics of power electronic devices.	K3
3	Acquire knowledge about fundamental concepts and techniques used in power electronics.	K2
4	Foster ability to identify basic requirements for power electronic based design application.	K4
5	To develop skills to build, and troubleshoot power electronics circuits	K5

K1 - Remember; K2 - Understand; K3 - Apply; K4 - Analyze; K5 - Evaluate; K6 - Create

(ANY 16 EXPERIMENTS)

- 1. Triggering of SCR by R, C and Diac.
- 2. Design of snubber circuit.
- 3. Fan regulator using Triac.
- 4. Thyristor chopper.
- 5. TRIAC Flasher.
- 6. Commutation Techniques.
- 7. Speed control of DC motor using SCR.
- 8. Automatic street light controller
- 9. Burglar Alarm
- 10. Sequencer Circuit.
- 11.Power Inverter
- 12.Switching Regulators
- 13. Automatic Battery

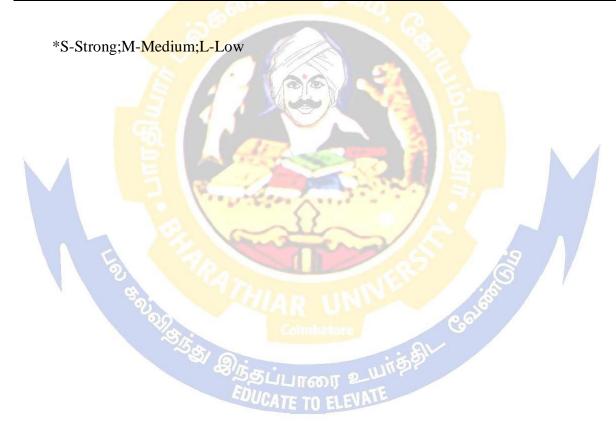

Charger 14.Firealarm

15.ON / OFF relay control using opto – coupler

- 16.Servo stabilizer
- 17.Layout and Art Work preparation for PCB
- 18. Etching Drilling and Component mounting of PCB
- 19. Temperature controller using AD 590/LM 35.
- 20. Construction of Emergency Lamp.
- 21. Phase Control Circuit
- 22.Cycloconverter
- 23. Thyristor protection circuit

Skill	Based Su	ıbject: IV	Practical.	3		P	3	
Pre-	requisite	9	Basic computer skills and familiarity with	bus	s 2023-			
	_		Microsoft Windows. students are familiar with programming	Vers	ion	2024		
	language such as C/C++ and data structures, algorithms							
Cour	se Objec	tives:						
			is course are to:					
Expe	cted Cou	rse Outc <mark>or</mark>		e handlii	ng.			
		-	etion of the course, student will be able to:					
	Jnderstand professiona		oncepts of Java Programming with emphasis on ethics an	d princi	ples of	f K	K1, K	
			on of objects, classes and methods and the concepts of verloading, Arrays, branching and looping.			K		
	Create data files and Design a page using AWT controls and Mouse Events in Java programming Implement the concepts of code reusability and debugging. K2, K3							
4 Γ	Develop ap	oplications <mark>u</mark>	sing Strings, Interfaces and Packages and applets			K	3	
5 (Construct .	Java progr <mark>an</mark>	<mark>ns using Multithreaded</mark> Progr <mark>amming and Exception H</mark> an	dling	1 8	K	3	

K1 - Remember; K2 - Understand; K3 - Apply; K4 - Analyze; K5 - Evaluate; K6 - Create

JAVA PROGRAMMING (ANY 12 PROGRAMS)

- 1. Program to print the following triangle of numbers 1 121231234
- 2. Definingaclasswiththefollowingattributes1.xname 2.Date of Birth3.Date on which leg injection has to be given (sixty days from date of birth) 4. xdate on which polio drops is to be given (45 days from Date of birth). Write a constructor to construct the baby object. The constructor must find out the leg and polio drops dates from the date of birth. In the main program define a baby and display its details
- 3. Program to create and display a message on the window
- 4. Program to draw several shapes in the created window.
- 5. Program to create an applet and draw gridlines.
- 6. Java program to create a frame with two buttons called father and mother. When we click the father button the name of the father, his age and designation must appear. When we click mother similar details of mother appear.
- 7. Java program to create a frame with four text fields for name, age and qualification and a text field of multiple lines for address.
- 8. Program to draw circle, ellipse, square and rectangle at the mouse click position.
- 9. Java program to create four text fields for the name, street, city and pin code with suitable labels. Also add a button called my details, when you click the button your name, street, city and pin code must appear in the text fields.
- 10. Java program to demonstrate the multiple selection list boxes.
- 11. Program to create a canvas which displays a clock with hour hand and a minute hand depending upon an int variable minutes. Write another program with a frame, which displays the clock canvas. It must also have three buttons, tick, reset and close. When we click reset, the clock must reset to 12 hrs. When we click close, the frame closes.
- 12. Java program to create a menu bar and pull down menus.
- 13. Java program to create a window when we press M or m the window displays Good Morning A or the window displays Good Afternoon or the window displays Good Evening or n the window displays Good Night.
- 14. Java program to move different shapes (Circle, Ellipse, Square, and Rectangle) according to the arrow key pressed.
- 15. Program to handle the divide by zero exception.
- 16. Program to explain the multithreading with the use of multiplication tables. Three threads must be defined and each one must create one multiplication table; they are 5 tables, 7 tables and 13 table.
- 17. Program to illustrate thread priority. Create three threads and assign three different priorities.

Course Designed By:

- 1. Dr. K. Venmathi, Assistant Professor, LRG Government College for Women, Tiruppur.
- 2. Mr. S. Venkatesan, Assistant Professor, KSG College of Arts and Science, Coimbatore.

Course Objectives:

The main objectives of this course are to:

- 1. To provide knowledge levels needed for PLC programming and operating input and output modules.
- 2. To train the students to create ladder diagrams from process control description and understand various types of PLC registers
- 3. Apply PLC Timers and Counters for the control of industrial processes, PLC functions and Data Handling Functions.

Expected Course Outcomes:

On the successful completion of the course, student will be able to:

	The state of the s	
1	Gain knowledge on Programmable Logic Controllers and will understand different types of Devices to which PLC input and output modules	K1
2	Gain knowledge about various types of PLC registers, ladder diagrams from process	K2
	control descriptions	Э.
3	Develop a coil and contact control system and analog PLC operations	K4
4	Apply time delay on PLC operations	K3

K1 - Remember; K2 - Understand; K3 - Apply; K4 - Analyze; K5 - Evaluate; K6 - Create

Unit:1 INTRODUCTION TO PLC

10hours

Programmable Logic – Introduction - Programmable Logic Structures - Programmable Logic Arrays (PLAS), Programmable Array Logic (Pals), Programmable Gate Arrays (PGAS), Field Programmable Gate Arrays (FPGAS) - Sequential Network Design with Programmable Logic Devices (PLDs) - Design of Sequential Networks Using ROMs and Flash - Traffic Light Controller Using PAL

Unit:2 HARDWARE AND SOFTWARE COMPONENTS

10hours

Programmable Logic Controllers (PLCS) - Introduction Parts of PLC - Principles of Operation - PLC Sizes - PLC Hardware Components - I/O Section - Analog I/O Section - Analog I/O Modules, Digital I/O Modules CPU - Processor Memory Module - Programming Devices - Diagnostics of PLCS with Computers

Unit:3 INSTRUCTIONS AND RELAYS

10hours

PLC Programming -Simple Instructions - Programming EXAMINE ON and EXAMINE OFF Instructions -Electromagnetic Control Relays -Motor Starters -Manually Operated Switches

- Mechanically Operated and Proximity Switches - Output Control Devices - Latching Relays - PLC Ladder Diagram - Converting Simple Relay Ladder Diagram into PLC Relay Ladder Diagram

Unit:4	COUNTER AND TIMER	9hours					
Timer Instructi	ons ON DELAY Timer and OFF DELAY Timer - Counter Inst	ructions - Up/Down					
Counters -Timer and Counter Applications - Program Control Instructions - Data Manipulating							
Instructions - N	Math Instructions						

Applications of PLC - Simple Materials Handling Applications - Automatic Control of Warehouse Door - Automatic Lubricating Oil Supplier Conveyor Belt - Motor Control Automatic Car Washing Machine - Bottle Label Detection - Process Control Application Total Lecture hours 48hours Text Book(s) 1 Charles H. Roth, Jr — Fundamentals of Logic Design ", Fourth Edition, Jaico Publishing hourseless of Logic Controllers ", McGraw- Hill book, company, 1 3 Siemens — PLC Handbook ". Reference Books 1 1. William I. Fletcher — An Engineering Approach to Digital Design ", Prentice, Hall of India Ltd., New Delhi, 1999.

Elective-III – J		6	T	4
Pre-requisite	Digital Electronics, Microprocessor and Computer	Syllal	bus	2023-
	fundamentals	Versi	on 2	2024
Course Objectives:				
The main objectives of the	nis course are to:			
1. To provide basic cond	cepts in virtual instruments			
_	ogramming methods in software used in virtual instru	mentati	on	
3. To familiarize the stu	idents with the applications of virtual instrumentation			
Expected Course Outco				
On the successful comp	letion of the course, student will be able to:			
1 Understand the basic	es concepts and programming in virtual instrumentation	n		K2
2 Apply virtual instrur	nentation tool set for a given problem			К3
3 Apply virtual instrur	nentation concept for a given applications			К3
4 Understand the basic	programming concepts			K2
5 Understand the diffe	rent lab view applications			K2

Course Objectives:

Unit: 1

The objectives of this course are:

- ❖ To provide knowledge on Fabrication Process of NMOS, PMOS, CMOS AND BICMOS, Super integration concepts.
- ❖ To develop the skill to analyze the electrical properties of MOS transistor, design stick diagrams and layout diagrams for MOS transistors, contacts and wires.
- To investigate the effect of floor planning, placement, routing and power delay estimation in physical design of digital circuits and memory design.
- ❖ To apply the concept of Combinational and Sequential Circuit Testing.

Expected Course Outcomes:							
On successful completion of the course, student will be able to:							
1	Gain the knowledge on fabrication principles.	K1					
2	Able to analyze the electrical properties of MOS transistors.	K4					
3	Apply the appropriate layout design rule to create a VLSI layout for a design.	K6					
4	Understand the physical design steps and gain the knowledge on types of						
7	VLSI design styles.	4					
5	Gain the knowledge, analyze and apply test principles to evaluate the VLSI	K5					
	designs.						
K1 - Remember: K2 - Understand: K3 - Apply: K4 - Apalyze: K5 - Evaluate: K6							

Create VLSI TECHNOLOGY

Fabrication sequence – process flow – Testing – Super integration concepts – Integrated Passive components – MOS Resistors and capacitors – Crossovers – NMOS – PMOS – CMOS – BICMOS fabrication processes – comparison.

ELECTRICAL PROPERTIES OF MOS DEVICES Unit: 2 10 Hours Drain to source current (I_{ds}) versus Drain to source voltage (V_{ds}) relationships – MOS transistor threshold voltage (V_t) – MOS transistor trans-conductance g_m and output conductance g_{ds} – figure of merit (ω_0) – pass transistor- pull – up to pull – down ratio.

DESIGN PROCESSES Unit: 3 10 Hours

VLSI design flow - stick diagram design rules with examples - Design rules for Layout diagrams of digital circuits—sheet resistance R_s—standard unit of capacitance — Inverter delays – Propagation delays- scaling of MOS circuits – limitations of scaling.

Unit: 4	VLSI PHYSICAL DESIGN AND STYLES	09 Hours								
PHYSICAL DESIGN:										
Floor Planning – Placement – Routing – Power Delay Estimation – Clock Routing – Power										
Routing.	Routing.									
VLSI DESIGN S	TYLES:									
Full Custom – Ser	mi custom – Standard Cells – Gate Arrays – FPGAs – CPLDs									
Unit: 5 TESTING OF VLSI CIRCUITS 09 Hours										
Test Principles-BIST-Test Bench- Combinational Circuit Testing, Sequential Circuit Testing,										
Test Bench Techniques.										
Total Lecture Hours 48 Hours

DEPARTMENT OF ELECTRONICS AND COMMUNICATION SYSTEMS

MISSION

- To develop appropriate facilities for promoting research activities
- To inculcate leadership qualities among students for self and societal growth
- To nurture students on emerging technologies for serving industry needs through industry institute interface
- To enrich teaching learning process by transforming young minds to be resourceful engineers
