# Semester – I

| Course Code   |   | Programming in C   | L                | T              | P | C         |
|---|---|--|------------------|----------------|---|-----------|
| Core/elective/Supportive  |   | Core: 1  | 5                | 0              | 0 | 4         |
| Pre – requisite   |   | <ul style="list-style-type: none"> <li>Basic knowledge in computers</li> </ul> | Syllabus version | 2023-24 Onward |   |           |
| <b>Course Objectives</b>  |   |  |                  |                |   |           |
| To introduce the concepts of Procedure Oriented Programming and the various programming constructs of C programming   |   |  |                  |                |   |           |
| <b>Expected Course Outcomes</b>   |   |  |                  |                |   |           |
| 1   | Describe about the about the fundamentals of computers, history and various types of software and hardware devices. |  |                  |                |   | K1        |
| 2   | Interpret the concepts of Variables, Constant, Operators and various types of Expressions                           |  |                  |                |   | K2        |
| 3   | Apply the concept of Decision-making statements and looping constructs for solving basic programs                   |  |                  |                |   | K3        |
| 4   | Use the concepts of files and pointers inside a C program   |  |                  |                |   | K3        |
| 5   | Develop programs incorporating all the C language constructs  |  |                  |                |   | K4        |
| 6   | Test the correctness of the programs and identify logical and syntax errors   |  |                  |                |   | K5        |
| <b>K1 – Remember K2 – Understand K3 – apply K4- Analyze K5 – evaluate K6- Create</b>  |   |  |                  |                |   |           |
| <b>UNIT I</b>   | <b>Fundamentals of Computers</b>  |  |                  |                |   | <b>12</b> |
| Fundamentals of Computers: Introduction – History of Computers-Generations of Computers- Classification of Computers-Basic Anatomy of a Computer System-Input Devices-Processor-Output Devices-Memory Management – Types of Software- Overview of Operating System- Programming Languages-Translator Programs-Problem Solving Techniques - Overview of C.   |   |  |                  |                |   |           |
| <b>UNIT II</b>  | <b>Overview of C</b>  |  |                  |                |   | <b>11</b> |
| Overview of C - Introduction - Character set - C tokens - keyword & Identifiers - Constants - Variables - Data types - Declaration of variables - Assigning values to variables - Defining Symbolic Constants - Arithmetic, Relational, Logical, Assignment, Conditional, Bitwise, Special, Increment and Decrement operators - Arithmetic Expressions - Evaluation of expression - precedence of arithmetic operators - Type conversion in expression – operator precedence & associativity - Mathematical functions - Reading & Writing a character - Formatted input and output. |   |  |                  |                |   |           |
| <b>UNIT III</b>   | <b>Decision Making and Branching</b>  |  |                  |                |   | <b>12</b> |
| Decision Making and Branching: Introduction – if, if... else, nesting of if ...else statements- else if ladder – The switch statement, The? Operator – The go to Statement. Decision Making and Looping: Introduction- The while statement- the do statement – the for statement-jumps in loops. Arrays – Character Arrays and Strings  |   |  |                  |                |   |           |
| <b>UNIT IV</b>  | <b>Functions</b>  |  |                  |                |   | <b>12</b> |
| User-Defined Functions: Introduction – Need and Elements of User-Defined Functions- Definition- Return Values and their types - Function Calls – Declarations – Category of Functions- Nesting of Functions - Recursion – Passing Arrays and Strings to Functions - The Scope, Visibility and Lifetime of Variables- Multi file Programs- Structures and Unions.  |   |  |                  |                |   |           |

| UNIT V  |  | POINTERS | 13 Hours        |
|---|--|----------|-----------------|
| Pointers: Introduction-Understanding Pointers-Accessing the address of a variable-Declaration and Initialization of pointer Variable – Accessing a variable through its pointer-Chain of pointers- Pointer Expressions – Pointer Increments and Scale factor- Pointers and Arrays- Pointers and Strings – Array of pointers – Pointers as Function Arguments- Functions returning pointers – Pointers to Functions – Pointers and Structures. File Management in C. |  |          |                 |
| <b>Total Lecture Hours</b>  |  |          | <b>60 Hours</b> |
| <b>Text Book(S)</b>   |  |          |                 |

| <b>Course Objectives</b>   |   |  |                         |          |                       |                |
| To introduce the concepts of Procedure Oriented Programming and the various programming constructs of C programming. |   |  |                         |          |                       |                |
| <b>Expected Course Outcomes</b>  |   |  |                         |          |                       |                |
| 1  | Apply the various basic programming constructs like decision making statements. Looping statements, functions, structures, pointers and files |  |                         |          |                       | <b>K3</b>      |
| 2  | Design programs using the concept of files in C and be able to simulate operations  |  |                         |          |                       | <b>K4</b>      |
| 3  | Determine the efficient techniques in programming to solve various scientific Problems  |  |                         |          |                       | <b>K5</b>      |
| <b>K1 – Remember K2 – Understand K3 – apply K4- Analyze K5 – evaluate K6- Create</b>                                 |   |  |                         |          |                       |                |
| <b>EXERCISE 1</b>  | <b>Implementation of Control structures</b>   |  |                         |          |                       | <b>6</b>       |
| Develop various C Programs using Control Structures  |   |  |                         |          |                       |                |
| Develop various C programs using Switch case.  |   |  |                         |          |                       |                |
| <b>EXERCISE 2</b>  | <b>Implementation of Loopings</b>   |  |                         |          |                       | <b>6</b>       |
| Develop various C program for the implementation of looping  |   |  |                         |          |                       |                |
| Develop various C program for the implementation of looping & Control Structures                                     |   |  |                         |          |                       |                |
| <b>EXERCISE 3</b>  | <b>Implementation of Functions</b>  |  |                         |          |                       | <b>9</b>       |
| Develop a C program to illustrate recursive function.  |   |  |                         |          |                       |                |
| Develop a C program to find the palindrome in a given sentence   |   |  |                         |          |                       |                |
| Develop a C program to manipulate strings using string functions.  |   |  |                         |          |                       |                |
| Develop a C Program using Functions  |   |  |                         |          |                       |                |
| <b>EXERCISE 4</b>  | <b>Implementation of Pointers</b>   |  |                         |          |                       | <b>6</b>       |
| Develop a C program to swap two integers using pointers.   |   |  |                         |          |                       |                |
| Develop a C program using Array of Pointers.   |   |  |                         |          |                       |                |
| <b>EXERCISE 5</b>  | <b>Implementation of Structures</b>   |  |                         |          |                       | <b>6</b>       |
| Develop a C program using the structures.  |   |  |                         |          |                       |                |
| Develop a C program using Array of Structures.   |   |  |                         |          |                       |                |
| <b>EXERCISE 6</b>  | <b>Implementation of Files</b>  |  |                         |          |                       | <b>6</b>       |
| Develop a C program to calculate electricity bill using files  |   |  |                         |          |                       |                |
| <b>EXERCISE 7</b>  | <b>Implementation of Security</b>   |  |                         |          |                       | <b>6</b>       |
| Develop a C program to encrypt and decrypt a string  |   |  |                         |          |                       |                |
| Develop a G program to encrypt and decrypt Files   |   |  |                         |          |                       |                |
| <b>Total Lecture Hours</b>   |   |  |                         |          |                       | <b>45Hours</b> |
|  |   |  |                         |          |                       |                |
|  |   |  |                         |          |                       |                |

| <ul style="list-style-type: none"> <li>To introduce the concept of data structures and the types of data structures</li> <li>To demonstrate how various data structures can be implemented and used in various applications</li> </ul>   |  |   |                  |   |                 |                 |
| <b>Expected Course Outcomes</b>  |  |   |                  |   |                 |                 |
| 1  | Define the concept of Data structure and list the various classifications of data structures.  |   |                  |   |                 | K1              |
| 2  | Demonstrate how arrays, stacks, queues, linked lists, trees, heaps, Graphs and Hash Tables are represented in the main memory and various operations are performed on those data structures. |   |                  |   |                 | K2              |
| 3  | Illustrate the various file organizations like Sequential, Random and Linked organizations.  |   |                  |   |                 | K2              |
| 4  | Discover the real time applications of the various data structures   |   |                  |   |                 | K3              |
| 5  | Design algorithms for various sorting and searching techniques   |   |                  |   |                 | K4              |
| <b>K1 – Remember K2 – Understand K3 – apply K4- Analyze K5 – evaluate K6- Create</b>   |  |   |                  |   |                 |                 |
| <b>UNIT I</b>  | <b>INTRODUCTION</b>  |   |                  |   |                 | <b>12 Hours</b> |
| Introduction: Introduction of Algorithms, Analyzing Algorithms. Arrays: Sparse Matrices - Representation of Arrays. Stacks and Queues. Fundamentals - Evaluation of Expression Infix to Postfix Conversion - Multiple Stacks and Queues  |  |   |                  |   |                 |                 |
| <b>UNIT II</b>   | <b>LINKED LIST</b>   |   |                  |   |                 | <b>12</b>       |
| Linked List: Singly Linked List - Linked Stacks and Queues - Polynomial Addition - More on Linked Lists - Sparse Matrices - Doubly Linked List and Dynamic - Storage Management - Garbage Collection and Compaction.   |  |   |                  |   |                 |                 |
| <b>UNIT III</b>  | <b>NON-LINEAR DATA STRUCTURES</b>  |   |                  |   |                 | <b>12 Hours</b> |
| Trees: Basic Terminology - Binary Trees - Binary Tree Representations - Binary Trees -Traversal - More on Binary Trees - Threaded Binary Trees - Binary Tree Representation of Trees - Counting Binary Trees. Graphs: Terminology and Representations - Traversals, Connected Components and Spanning Trees, Shortest Paths and Transitive Closure |  |   |                  |   |                 |                 |
| <b>UNIT IV</b>   | <b>EXTERNAL – SORTING</b>  |   |                  |   |                 | <b>12 Hours</b> |
| External Sorting: Storage Devices -Sorting with Disks: K-Way Merging - Sorting with Tapes Symbol Tables: Static Tree Tables - Dynamic Tree Tables - Hash Tables: Hashing Functions - Overflow Handling.  |  |   |                  |   |                 |                 |
| <b>UNIT V</b>  | <b>INTERNAL – SORTING</b>  |   |                  |   |                 | <b>12 Hours</b> |
| Internal Sorting: Insertion Sort - Quick Sort - 2 Way Merge Sort - Heap Sort - Shell Sort - Sorting on Several Keys. Files: Files, Queries and Sequential organizations - Index Techniques -File Organizations.  |  |   |                  |   |                 |                 |
| <b>Total Hours</b>   |  |   |                  |   | <b>60 Hours</b> |                 |

| Pre – requisite   | None  |  |  | Syllabus version | 2023_24 Onward |                 |           |
| <b>Course Objectives</b>  |   |  |  |                  |                |                 |           |
| To introduce the computational techniques and algebraic skills essential for the study of systems of linear equations, matrix algebra, and vector spaces  |   |  |  |                  |                |                 |           |
| <b>Expected Course Outcomes</b>   |   |  |  |                  |                |                 |           |
| 1   | Explain the concept/theory in linear algebra, to develop dynamic and graphical views to the related issues of the chosen topics as outlined in “course content,” and to formally prove theorems |  |  |                  |                |                 | K2        |
| 2   | Recognize the basic applications of the chosen topics and their importance in the modern science  |  |  |                  |                |                 | K3        |
| 3   | Develop simple mathematical models, and apply basic linear algebra techniques learned from the chosen topics to solve simple problems   |  |  |                  |                |                 | K3        |
| 4   | Report and communicate effectively with others and present mathematical results in a logical and coherent fashion   |  |  |                  |                |                 | K4        |
| 5   | Appraise the power and beauty of mathematics, and solve problems independently and collaboratively as part of a team  |  |  |                  |                |                 | K5        |
| <b>K1 – Remember K2 – Understand K3 – apply K4- Analyze K5 – evaluate K6- Create</b>  |   |  |  |                  |                |                 |           |
| <b>UNIT I</b>   |   |  |  |                  |                |                 | <b>15</b> |
| Introduction – Vectors and Matrices – Length and Dot Products – Solving Linear Equations – Linear Equations – The Idea of Elimination – Elimination Using Matrices – Rules for Matrix Operations – Inverse Matrices – Elimination = Factorization: $A = LU$ – Transposes and Permutations   |   |  |  |                  |                |                 |           |
| <b>UNIT II</b>  |   |  |  |                  |                |                 | <b>15</b> |
| Vector Spaces and Subspaces – Spaces of Vectors – The Null space of A: Solving $Ax = 0$ – The Rank and the Row Reduced Form – The complete solution to $Ax=b$ – Independence, Basis, and Dimensions<br>– Dimensions of the four Subspaces – Orthogonality – Orthogonality of the Four Subspaces – Projections – Least Squares Approximations – Orthogonal Bases and Gram – Schmidt. |   |  |  |                  |                |                 |           |
| <b>UNIT III</b>   |   |  |  |                  |                |                 | <b>15</b> |
| Determinants – The Properties of Determinants – Permutations and Cofactors – Cramer’s Rule, Inverse, and Volumes – Eigen values and Eigenvectors – Introduction to Eigen values – Diagonalizing a Matrix – Applications to Differential Equations – Symmetric Matrices – Positive Definite Matrices – Similar Matrices – The Singular Value Decomposition                           |   |  |  |                  |                |                 |           |
| <b>UNIT IV</b>  |   |  |  |                  |                |                 | <b>15</b> |
| Singular value Decomposition – Linear Transformations – The Idea of a Linear Transformation – The Matrix of a Linear Transformation – Change of Basis – Diagonalization and the Pseudo inverse.   |   |  |  |                  |                |                 |           |
| <b>UNIT V</b>   |   |  |  |                  |                |                 | <b>15</b> |
| Complex Vectors and Complex Matrices – Complex Numbers – Hermitian and Unitary Matrices – The Fast Fourier Transform – Applications – Numerical Linear Algebra.   |   |  |  |                  |                |                 |           |
| <b>Total Lecture Hours</b>  |   |  |  |                  |                | <b>75 Hours</b> |           |

## Semester -II

| Course Code   |   | Programming in C++   | L                | T | P              | C               |
|---|---|--|------------------|---|----------------|-----------------|
| Core/elective/Supportive  |   | Core : 3   | 5                | 0 | 0              | 4               |
| Pre – requisite   |   | <ul style="list-style-type: none"> <li>Basic knowledge of Procedure Oriented Programming concepts</li> <li>Basic knowledge in C Programming</li> </ul> | Syllabus version |   | 2021-22 Onward |                 |
| <b>Course Objectives</b>  |   |  |                  |   |                |                 |
| To introduce the concepts of Object Oriented Programming Paradigm and the programming constructs of C++   |   |  |                  |   |                |                 |
| <b>Expected Course Outcomes</b>   |   |  |                  |   |                |                 |
| 1   | Describe the procedural and object oriented paradigm with concepts of streams, classes, functions, data and objects               |  |                  |   |                | K1              |
| 2   | Demonstrate the various basic programming constructs like decision making statements. Looping statements and functions            |  |                  |   |                | K2              |
| 3   | Explain the object oriented concepts like overloading, inheritance, polymorphism, virtual functions, constructors and destructors |  |                  |   |                | K3              |
| 4   | Explain the various file stream classes; file types, usage of templates and exception handling mechanisms.                        |  |                  |   |                | K3              |
| 5   | Compare the pros and cons of procedure oriented language with the concepts of object oriented language                            |  |                  |   |                | K5              |
| 6   | Develop programs incorporating the programming constructs of object oriented programming concepts                                 |  |                  |   |                | K5              |
| <b>K1 – Remember K2 – Understand K3 – apply K4- Analyze K5 – evaluate K6- Create</b>  |   |  |                  |   |                |                 |
| <b>UNIT I</b>   | <b>Introduction to C++</b>  |  |                  |   |                | <b>12</b>       |
| Introduction to C++ - key concepts of Object-Oriented Programming – Advantages – Object Oriented Languages – I/O in C++ - C++ Declarations. Control Structures : - Decision Making and Statements : If .. else, jump, goto, break, continue, Switch case statements - Loops in C++ : for, while, do - functions in C++ - inline functions – Function Overloading. |   |  |                  |   |                |                 |
| <b>UNIT II</b>  | <b>Classes and Objects</b>  |  |                  |   |                | <b>14</b>       |
| Classes and Objects: Declaring Objects – Defining Member Functions – Static Member variables and functions – array of objects – friend functions – Overloading member functions – Bit fields and classes – Constructor and destructor with static members.  |   |  |                  |   |                |                 |
| <b>UNIT III</b>   | <b>Operator Overloading and Inheritance</b>   |  |                  |   |                | <b>16</b>       |
| Operator Overloading: Overloading unary, binary operators – Overloading Friend functions – type conversion – Inheritance: Types of Inheritance – Single, Multilevel, Multiple, Hierarchical, Hybrid, Multi path inheritance – Virtual base Classes – Abstract Classes.  |   |  |                  |   |                |                 |
| <b>UNIT IV</b>  | <b>Pointers and Polymorphism</b>  |  |                  |   |                | <b>18</b>       |
| Pointers – Declaration – Pointer to Class, Object – this pointer – Pointers to derived classes and Base classes – Arrays – Characteristics – array of classes – Memory models – new and delete operators –  |   |  |                  |   |                |                 |
| <b>UNIT V</b>   | <b>File and Exception Handling</b>  |  |                  |   |                | <b>15</b>       |
| Files – File stream classes – file modes – Sequential Read / Write operations – Binary and ASCII Files – Random Access Operation – Templates – Exception Handling - String – Declaring and Initializing string objects – String Attributes – Miscellaneous functions .  |   |  |                  |   |                |                 |
| <b>Total Lecture Hours</b>  |   |  |                  |   |                | <b>75 Hours</b> |

| <b>Course Objectives</b>   |  |  |                  |   |                |          |
| To introduce the concepts of Object Oriented Programming Paradigm and the programming constructs of C++  |  |  |                  |   |                |          |
| <b>Expected Course Outcomes</b>  |  |  |                  |   |                |          |
| 1  | Apply the various basic programming constructs like decision making statements. Looping statements, functions, concepts like overloading, inheritance, polymorphism, virtual functions, constructors and destructors |  |                  |   |                | K3       |
| 2  | Illustrate the concept of Virtual Classes, inline functions and friend functions   |  |                  |   |                | K4       |
| 3  | Compare the various file stream classes; file types, usage of templates and exception handling mechanisms.   |  |                  |   |                | K5       |
| 4  | Compare the pros and cons of procedure oriented language with the concepts of object oriented language   |  |                  |   |                | K5       |
| <b>K1 – Remember K2 – Understand K3 – apply K4- Analyze K5 – evaluate K6- Create</b>   |  |  |                  |   |                |          |
| <b>PROGRAM - 1</b>   |  |  |                  |   |                | <b>5</b> |
| Write a C++ Program to create a class to implement the data structure STACK. Write a constructor to initialize the TOP of the STACK. Write a member function PUSH () to insert an element and member function POP () to delete an element check for overflow and underflow conditions. |  |  |                  |   |                |          |
| <b>PROGRAM - 2</b>   |  |  |                  |   |                | <b>5</b> |
| Write a C++ Program to create a class ARITHMETIC which consists of a FLOAT and an INTEGER variable. Write member functions ADD (), SUB (), MUL (), DIV () to perform addition, subtraction, multiplication, division respectively. Write a member function to get and display values.  |  |  |                  |   |                |          |
| <b>PROGRAM - 3</b>   |  |  |                  |   |                | <b>5</b> |
| Write a C++ Program to read an integer number and find the sum of all the digits until it reduces to a single digit using constructors, destructors and inline member functions.   |  |  |                  |   |                |          |
| <b>PROGRAM - 4</b>   |  |  |                  |   |                | <b>5</b> |
| Write a C++ Program to create a class FLOAT that contains one float data member. Overload all the four Arithmetic operators so that they operate on the object FLOAT.  |  |  |                  |   |                |          |
| <b>PROGRAM - 5</b>   |  |  |                  |   |                | <b>5</b> |
| Write a C++ Program to create a class STRING. Write a Member Function to initialize, get and display strings. Overload the operators ++ and == to concatenate two Strings and to compare two strings respectively  |  |  |                  |   |                |          |

|  |   |                 |
|--|---|-----------------|
| <b>PROGRAM -6</b>  |   | <b>5</b>        |
| Write a C++ Program to create class, which consists of EMPLOYEE Detail like E_Number, E_Name, Department, Basic, Salary, Grade. Write a member function to get and display them. Derive a class PAY from the above class and write a member function to calculate DA, HRA and PF depending on the grade.   |   |                 |
| <b>PROGRAM -7</b>  |   | <b>5</b>        |
| Write a C++ Program to create a class SHAPE which consists of two VIRTUAL FUNCTIONS Calculate_Area() and Calculate_Perimeter() to calculate area and perimeter of various figures. Derive three classes SQUARE, RECTANGLE, TRIANGLE from class Shape and Calculate Area and Perimeter of each class separately and display the result.                               |   |                 |
| <b>PROGRAM -8</b>  |   | <b>5</b>        |
| Write a C++ Program to create two classes each class consists of two private variables, a integer and a float variable. Write member functions to get and display them. Write a FRIEND Function common to both classes, which takes the object of above two classes as arguments and the integer and float values of both objects separately and display the result. |   |                 |
| <b>PROGRAM -9</b>  |   | <b>5</b>        |
| Write a C++ Program using Function Overloading to read two Matrices of different Data Types such as integers and floating point numbers. Find out the sum of the above two matrices separately and display the sum of these arrays individually.   |   |                 |
| <b>PROGRAM -10</b>   |   | <b>5</b>        |
| Write a C++ Program to check whether the given string is a palindrome or not using Pointers.   |   |                 |
| <b>PROGRAM -11</b>   |   | <b>5</b>        |
| Write a C++ Program to create a File and to display the contents of that file with line numbers.   |   |                 |
| <b>PROGRAM -12</b>   |   | <b>5</b>        |
| Write a C++ Program to merge two files into a single file.   |   |                 |
| <b>Total Lecture Hours</b>   |   | <b>60 Hours</b> |
| <b>Text Book(s)</b>  |   |                 |

| <b>Pre-requisite</b>   |   | Basic level on mathematical computation       | <b>Syllabus Version</b> | <b>2023-2024</b> |            |                |
| <b>Course Objectives:</b>  |   |   |                         |                  |            |                |
| The main objectives of this course are to:   |   |   |                         |                  |            |                |
| 1. Understand the relationship between two variables.  |   |   |                         |                  |            |                |
| 2. Know the concept of association of attributes and methods.  |   |   |                         |                  |            |                |
| 3. Be familiar with the theoretical probability and its concepts.  |   |   |                         |                  |            |                |
| <b>Expected Course Outcomes:</b>   |   |   |                         |                  |            |                |
| On the successful completion of the course, student will be able to:   |   |   |                         |                  |            |                |
| 1  | Measure and interpret the degree of relationship between variables.       |   |                         |                  | K1, K2, K3 |                |
| 2  | Estimate the average relationship using regression.                       |   |                         |                  | K3, K4, K5 |                |
| 3  | Interpret the association of attributes applying different methods.       |   |                         |                  | K3, K4, K5 |                |
| 4  | Understand the concepts of probability and relate to real life situations |   |                         |                  | K1, K2     |                |
| 5  | Apply the theorems in practical problems with conditional probability     |   |                         |                  | K3, K4     |                |
| <b>K1 - Remember; K2 - Understand; K3 - Apply; K4 - Analyze; K5 - Evaluate; K6- Create</b>   |   |   |                         |                  |            |                |
| <b>Unit:1</b>  | <b>Basics of Probability</b>  |   |                         |                  |            | <b>9 hours</b> |
| Probability: Sample Space-Concepts of events- Algebraic operations on events-Definitions of probability.   |   |   |                         |                  |            |                |
| <b>Unit:2</b>  | <b>Properties of Probability</b>  |   |                         |                  |            | <b>9 hours</b> |
| Generalized addition and compound Theorems of probability-independent events – Conditional probability, Inverse probability – Baye’s Theorem.  |   |   |                         |                  |            |                |
| <b>Unit:3</b>  | <b>Random Variable and Probability Distribution functions</b>             |   |                         |                  |            | <b>9 hours</b> |
| Random variables –discrete and continuous random variables –distribution function-properties-probability mass function and probability density function –various statistical measures of continuous probability distribution |   |   |                         |                  |            |                |
| <b>Unit:4</b>  | <b>Generating Functions</b>   |   |                         |                  |            | <b>9 hours</b> |
| Moment generating function, cumulant generating function, characteristic function and their properties.  |   |   |                         |                  |            |                |
| <b>Unit:5</b>  | <b>Theorems on probability of random variable</b>                         |   |                         |                  |            | <b>9 hours</b> |
| Tchebychev’s inequality, convergence in probability, weak law of large numbers and central limit theorem.  |   |   |                         |                  |            |                |

|--|---|------------------|-----------------|---|-----------------|
| Core/Elective/Supportive   | Core : 4  | 4                | 0               | 0 | 4               |
| Pre - requisite  | <ul style="list-style-type: none"> <li>Knowledge in Basics of Object Oriented Programming</li> </ul>  | Syllabus version | 2022-23 Onwards |   |                 |
| <b>Course Objectives</b>   |   |                  |                 |   |                 |
| 1. To introduce the concepts of Object-Oriented Programming Paradigm and the programming constructs of JAVA  |   |                  |                 |   |                 |
| <b>Course Outcomes</b>   |   |                  |                 |   |                 |
| 1  | Recite the history of JAVA and its evolution  |                  |                 |   | <b>K1</b>       |
| 2  | Explain the various programming language constructs, object-oriented concepts like overloading, inheritance, polymorphism, Interfaces, threads, exception handling and packages |                  |                 |   | <b>K2</b>       |
| 3  | Illustrate the concepts of Applets, files and the concept of stream classes.  |                  |                 |   | <b>K3</b>       |
| 4  | Outline the benefits and applications of objects oriented programming concepts and defend how JAVA differs from other programming languages                                     |                  |                 |   | <b>K3</b>       |
| 5  | Judge the pros and cons of other object oriented language with the concepts of JAVA   |                  |                 |   | <b>K4</b>       |
| <b>K1 – Remember K2 – Understand K3 – apply K4- Analyze K5 – evaluate K6- Create</b>   |   |                  |                 |   |                 |
| <b>Unit I</b>  | <b>Introduction</b>   |                  |                 |   | <b>18</b>       |
| Java Features – comparison of Java with C and C++ - Java and Internet – Java Environment – Java Program structure – Java Tokens – Implementing a Java Program – Java Virtual Machine – Constants – Variables – Data Types – Scope of Variables – Type casting – Operators and expressions – Decision Making, Branching and Looping |   |                  |                 |   |                 |
| <b>Unit II</b>   | <b>Classes and Arrays</b>   |                  |                 |   | <b>18</b>       |
| Defining a class – Constructors – Methods – overloading – static Members – Nesting of Methods – Overriding methods – Final Classes – Abstract Class – Visibility control – Arrays – creating an array – Two Dimensional arrays – Strings – String Arrays – String Methods – String Buffer Class – Vectors – Wrapper Classes.       |   |                  |                 |   |                 |
| <b>Unit III</b>  | <b>Inheritance, Interfaces and Packages</b>   |                  |                 |   | <b>17</b>       |
| Defining a subclass – Subclass constructor – Multilevel inheritance – Hierarchical Inheritance – Defining Interfaces – Extending Interfaces – Implementing Interfaces – Java APF Packages – creating a package – Accessing and Using a package – Adding a class to a package – Hiding Classes                                      |   |                  |                 |   |                 |
| <b>Unit IV</b>   | <b>Multithreading Exception Handling</b>  |                  |                 |   | <b>19</b>       |
| Extending the Thread class – Thread Life cycle – Thread Exception – Thread priority – Synchronization – Runnable Interface – Exceptions – Throwing own Exceptions – Concepts of streams – stream classes – Byte Stream Classes – Character stream Classes – Using Streams – Using file Class –Other Stream Classes.                |   |                  |                 |   |                 |
| <b>Unit V</b>  | <b>Applet Programming</b>   |                  |                 |   | <b>18</b>       |
| Difference between Application and Applets – Applet Life cycle – creating an Executable Applet – Designing a Web Page – Adding Applet to HTML File – Passing Parameters to Applets   |   |                  |                 |   |                 |
| <b>Total Lecture Hours</b>   |   |                  |                 |   | <b>90 Hours</b> |

| <b>Text Book(s)</b>  |  |

| <b>Course Objectives</b>   |  |   |                  |   |                    |                 |
| To introduce the concepts of Object Oriented Programming Paradigm and the programming constructs of JAVA   |  |   |                  |   |                    |                 |
| <b>Course Outcomes</b>   |  |   |                  |   |                    |                 |
| 1  | Apply the various basic programming constructs of JAVA like decision making statements. Looping statements, overloading, inheritance, polymorphism, constructors and destructors |   |                  |   |                    | <b>K3</b>       |
| 2  | Illustrate the concepts of threading and multi-threading   |   |                  |   |                    | <b>K4</b>       |
| 3  | Design programs using various file stream classes; file types, and frames  |   |                  |   |                    | <b>K4</b>       |
| <b>K1 – Remember K2 – Understand K3 – apply K4- Analyze K5 – evaluate K6- Create</b>   |  |   |                  |   |                    |                 |
| <b>PROGRAM - 1</b>   |  |   |                  |   |                    | <b>3</b>        |
| Write a Java Applications to extract a portion of a character string and print the extracted string.   |  |   |                  |   |                    |                 |
| <b>PROGRAM - 2</b>   |  |   |                  |   |                    | <b>3</b>        |
| Write a Java Program to implement the concept of multiple inheritance using Interfaces.  |  |   |                  |   |                    |                 |
| <b>PROGRAM - 3</b>   |  |   |                  |   |                    | <b>3</b>        |
| Write a Java Program to create an Exception called payout-of-bounds and throw the exception  |  |   |                  |   |                    |                 |
| <b>PROGRAM - 4</b>   |  |   |                  |   |                    | <b>3</b>        |
| Write a Java Program to implement the concept of multithreading with the use of any three multiplication tables and assign three different priorities to them. |  |   |                  |   |                    |                 |
| <b>PROGRAM - 5</b>   |  |   |                  |   |                    | <b>3</b>        |
| Write a Java Program to draw several shapes in the created windows   |  |   |                  |   |                    |                 |
| <b>PROGRAM -6</b>  |  |   |                  |   |                    | <b>3</b>        |
| Write a Java Program to demonstrate the Multiple Selection List-box.   |  |   |                  |   |                    |                 |
| <b>PROGRAM -7</b>  |  |   |                  |   |                    | <b>3</b>        |
| Write a Java Program to create a frame with three text fields for name, age and qualification and a text field for multiple line for address                   |  |   |                  |   |                    |                 |
| <b>PROGRAM -8</b>  |  |   |                  |   |                    | <b>3</b>        |
| Write a Java Program to create Menu Bars and pull down menus.  |  |   |                  |   |                    |                 |
| <b>PROGRAM -9</b>  |  |   |                  |   |                    | <b>3</b>        |
| Write a Java Program to create frames which respond to the mouse clicks.   |  |   |                  |   |                    |                 |
| <b>PROGRAM -10</b>   |  |   |                  |   |                    | <b>3</b>        |
| Write a Java Program to draw circle, square, ellipse and rectangle at the mouse click positions.   |  |   |                  |   |                    |                 |
|  |  |   |                  |   | <b>Total Hours</b> | <b>30 Hours</b> |

| <b>Pre - requisite</b>   |   | Basic Knowledge in Optimization | Syllabus version |          | 2022-23 Onwards |           |
| <b>Course Objectives</b>   |   |                                 |                  |          |                 |           |
| <p><b>The objective of this course is to enable the student to</b></p> <ol style="list-style-type: none"> <li>1. Formulate and solve linear programming problems (LPP)</li> <li>2. Evaluate Integer Programming Problems, Transportation and Assignment Problems.</li> <li>3. Obtain solution to network problems using CPM and PERT techniques.</li> <li>4. Able to optimize the function subject to the constraints.</li> <li>5. Identify and solve problems under game theory.</li> </ol> |   |                                 |                  |          |                 |           |
| <b>Course Outcomes</b>   |   |                                 |                  |          |                 |           |
| 1  | Demonstrate and Formulate and solve linear programming problems (LPP)                   |                                 |                  |          |                 | <b>K1</b> |
| 2  | Evaluate Integer Transportation and Assignment Problems                                 |                                 |                  |          |                 | <b>K2</b> |
| 3  | Obtain solution to network problems using CPM and PERT techniques                       |                                 |                  |          |                 | <b>K3</b> |
| 4  | Apply the strategies of game theory and to make better decisions while solving problems |                                 |                  |          |                 | <b>K4</b> |
| 5  | Identify and solve problems under replacement models                                    |                                 |                  |          |                 | <b>K5</b> |
| <b>K1 – Remember K2 – Understand K3 – apply K4- Analyze K5 – evaluate K6- Create</b>   |   |                                 |                  |          |                 |           |
| <b>Unit I</b>  | <b>Introduction To Operation Research</b>   |                                 |                  |          |                 | <b>15</b> |
| Introduction of Operations Research - Linear programming- Mathematical Formulation- Graphical Method to solve LPP-Simplex Method.  |   |                                 |                  |          |                 |           |
| <b>Unit II</b>   | <b>Transportation and Assignment Problems</b>   |                                 |                  |          |                 | <b>15</b> |
| <p>Transportation problems: Introduction- Finding Initial Basic Feasible solutions- moving Towards optimality (non- degenerate only) – Maximization in transportation problem- Unbalanced transportation problem.</p> <p>Assignment problem: Introduction –Hungarian Assignment method – Maximization in Assignment problem – Unbalanced Assignment problem- Travelling Salesman Problem.</p>  |   |                                 |                  |          |                 |           |
| <b>Unit III</b>  | <b>Project Scheduling Hours</b>   |                                 |                  |          |                 | <b>15</b> |
| Project network -Diagram representation – Floats - Critical path method (CPM) – PERT- Cost considerations in PERT and CPM. (Simple Problems Only).   |   |                                 |                  |          |                 |           |
| <b>Unit IV</b>   | <b>Game Theory</b>  |                                 |                  |          |                 | <b>15</b> |
| Game theory: Concept of Pure and Mixed strategies – solving 2 x 2 matrices with and without saddle point. Graphical solution - mx2 and 2xn games- Solving games by Dominance Property.   |   |                                 |                  |          |                 |           |

|   |                           |                 |
|---|---------------------------|-----------------|
| <b>UNIT V</b>   | <b>Replacement Theory</b> | <b>15</b>       |
| Theory of Replacement – Introduction - Replacement models –Replacement of items that deteriorates gradually (value of money does not change with time)  |                           |                 |
| <b>Total Lecture Hours</b>  |                           | <b>75 Hours</b> |

## Semester -IV

| Course Code   | Introduction to Python Programming   | L                       | T        | P                      | C         |           |
|---|--|-------------------------|----------|------------------------|-----------|-----------|
| <b>Core/Elective/Supportive</b>   | <b>Core : 6</b>  | <b>5</b>                | <b>0</b> | <b>-</b>               | <b>4</b>  |           |
| <b>Pre - requisite</b>  | <ul style="list-style-type: none"> <li>● Basic knowledge of Python Programming.</li> <li>● Knowledge in Object Oriented Programming Concepts.</li> </ul> | <b>Syllabus version</b> |          | <b>2022-23 Onwards</b> |           |           |
| <b>Course Objectives</b>  |  |                         |          |                        |           |           |
| 1. To know the basics of algorithmic problem solving with read and write simple Python programs.<br>2. To develop Python programs with conditionals and loops.<br>3. To define Python functions and call them.<br>4. To use Python data structures - lists, tuples, dictionaries and fix input/output with files in Python.   |  |                         |          |                        |           |           |
| <b>Expected Course Outcomes</b>   |  |                         |          |                        |           |           |
| 1   | Develop algorithmic solutions to simple computational problems   |                         |          |                        |           | <b>K1</b> |
| 2   | Read, write, execute by hand simple Python programs. Structure simple Python programs for solving problems.  |                         |          |                        |           | <b>K2</b> |
| 3   | Decompose a Python program into functions.   |                         |          |                        |           | <b>K3</b> |
| 4   | Represent compound data using Python lists, tuples, dictionaries. Read and write data from/to files in Python Programs                                   |                         |          |                        |           | <b>K3</b> |
| 5   | Judge the pros and cons of Python  |                         |          |                        |           | <b>K4</b> |
| <b>K1 – Remember K2 – Understand K3 – apply K4- Analyze K5 – evaluate K6- Create</b>  |  |                         |          |                        |           |           |
| <b>Unit I</b>   | <b>Algorithmic Problem Solving</b>   |                         |          |                        |           | <b>16</b> |
| Algorithms, building blocks of algorithms (statements, state, control flow, functions), notation (pseudo code, flow chart, programming language), algorithmic problem solving, simple strategies for developing algorithms (iteration, recursion).  |  |                         |          |                        |           |           |
| <b>Unit II</b>  | <b>Data, Expressions, Statements</b>   |                         |          |                        |           | <b>15</b> |
| Python interpreter and interactive mode, values and types: int, float, boolean, string and list; variables, expressions, statements, tuple assignment, precedence of operators, comments, modules and functions, function definition and use, flow of execution, parameters and arguments.  |  |                         |          |                        |           |           |
| <b>Unit III</b>   | <b>Control Flow, Functions</b>   |                         |          |                        |           | <b>14</b> |
| Conditionals: Boolean values and operators, conditional (if), alternative (if-else), chained conditional (if-elif-else). Iteration: state, while, for, break, continue, pass. Fruitful functions: return values, parameters, local and global scope, function composition, recursion. Strings: string slices, immutability, string functions and methods, string module, Lists as arrays. |  |                         |          |                        |           |           |
| <b>Unit IV</b>  | <b>Lists, Tuples, Dictionaries</b>   |                         |          |                        |           | <b>13</b> |
| Lists: list operations, list slices, list methods, list loop, mutability, aliasing, cloning lists, list parameters. Tuples: tuple assignment, tuple as return value, Dictionaries: operations and methods, advanced list processing - list comprehension.   |  |                         |          |                        |           |           |
| <b>Unit V</b>   | <b>Files, Modules, Packages</b>  |                         |          |                        |           | <b>17</b> |
| Files and exception: text files, reading and writing files, format operator, command line arguments, errors and exceptions, handling exceptions, modules, packages.   |  |                         |          |                        |           |           |
| <b>Total Lecture Hours</b>  |  |                         |          |                        | <b>75</b> |           |

| <ul style="list-style-type: none"> <li>Introduce the concepts of data ware house and data mining and explain the methodologies used for analysis of data</li> </ul>   |   |   |                         |                       |          |           |
| <b>Expected Course Outcomes</b>   |   |   |                         |                       |          |           |
| 1   | Understand the functionality of the various data mining and data warehousing Component      |   |                         |                       |          | <b>K2</b> |
| 2   | Describe different methodologies used in data mining and data ware housing.                 |   |                         |                       |          | <b>K2</b> |
| 3   | Explain the analyzing techniques and Online Analytical Processing                           |   |                         |                       |          | <b>K2</b> |
| 4   | Explain about the association rule mining and classification                                |   |                         |                       |          | <b>K2</b> |
| 5   | Compare different approaches of data ware housing and data mining with various Technologies |   |                         |                       |          | <b>K4</b> |
| <b>K1 – Remember K2 – Understand K3 – apply K4- Analyze K5 – evaluate K6- Create</b>  |   |   |                         |                       |          |           |
| <b>UNIT I</b>   | <b>Data Warehousing</b>   |   |                         |                       |          | <b>18</b> |
| Data warehousing Components –Building a Data warehouse – Mapping the Data Warehouse to a Multiprocessor Architecture – DBMS Schemas for Decision Support – Data Extraction, Cleanup, and Transformation Tools –Metadata.  |   |   |                         |                       |          |           |
| <b>UNIT II</b>  | <b>Business Analysis</b>  |   |                         |                       |          | <b>18</b> |
| Reporting and Query tools and Applications – Tool Categories – The Need for Applications – Cognos Impromptu – Online Analytical Processing (OLAP) – Need – Multidimensional Data Model – OLAP Guidelines – Multidimensional versus Multirelational OLAP – Categories of Tools – OLAP Tools and the Internet.  |   |   |                         |                       |          |           |
| <b>UNIT III</b>   | <b>Data Mining</b>  |   |                         |                       |          | <b>17</b> |
| Introduction – Data – Types of Data – Data Mining Functionalities – Interestingness of Patterns – Classification of Data Mining Systems – Data Mining Task Primitives – Integration of a Data Mining System with a Data Warehouse – Issues –Data Preprocessing  |   |   |                         |                       |          |           |
| <b>UNIT IV</b>  | <b>Association Rule Mining and Classification</b>   |   |                         |                       |          | <b>19</b> |
| Mining Frequent Patterns, Associations and Correlations – Mining Methods – Mining various Kinds of Association Rules – Correlation Analysis – Constraint Based Association Mining – Classification and Prediction – Basic Concepts – Decision Tree Induction – Bayesian Classification – Rule Based Classification – Classification by Back propagation – Support Vector Machines – Associative Classification – Lazy Learners – Other Classification Methods – Prediction. |   |   |                         |                       |          |           |
| <b>UNIT V</b>   | <b>Clustering And Trends In Data Mining</b>   |   |                         |                       |          | <b>18</b> |
| Cluster Analysis – Types of Data – Categorization of Major Clustering Methods – K-means– Partitioning Methods – Hierarchical Methods – Density-Based Methods –Grid Based Methods – Model-Based Clustering Methods – Clustering High Dimensional Data – Constraint – Based Cluster Analysis – Outlier Analysis – Data Mining Applications.   |   |   |                         |                       |          |           |
| <b>Total Lecture Hours</b>  |   |   |                         |                       |          | <b>90</b> |

| 1  | Apply the concept of Decision making statements, looping constructs , functions for solving basic programs |  |                  |         |        | K3              |
| 2  | Analyze the concepts of Lists, tuples and error handling mechanisms  |  |                  |         |        | K4              |
| 3  | Evaluate a program incorporating all the python language constructs  |  |                  |         |        | K5              |
| <b>K1 – Remember K2 – Understand K3 – apply K4- Analyze K5 – evaluate K6- Create</b>   |  |  |                  |         |        |                 |
| PROGRAM - 1  |  |  |                  |         |        | 5               |
| Write a python program that displays the following information: Your name, Full address Mobile number, College name, Course subjects.  |  |  |                  |         |        |                 |
| PROGRAM - 2  |  |  |                  |         |        | 5               |
| Write a python program to find the largest three integers using if-else and conditional operator.  |  |  |                  |         |        |                 |
| PROGRAM - 3  |  |  |                  |         |        | 5               |
| Write a python program that asks the user to enter a series of positive numbers (The user should enter a negative number to signal the end of the series) and the program should display the numbers in order and their sum. |  |  |                  |         |        |                 |
| PROGRAM - 4  |  |  |                  |         |        | 5               |
| Write a python program to find the product of two matrices [A]m <sub>x</sub> p and [B]p <sub>x</sub> r   |  |  |                  |         |        |                 |
| PROGRAM - 5  |  |  |                  |         |        | 5               |
| Write recursive functions for GCD of two integers.   |  |  |                  |         |        |                 |
| PROGRAM - 6  |  |  |                  |         |        | 10              |
| Write recursive functions for the factorial of positive integer.   |  |  |                  |         |        |                 |
| PROGRAM - 7  |  |  |                  |         |        | 10              |
| Write recursive functions for Fibonacci Sequence up to given number n.   |  |  |                  |         |        |                 |
| PROGRAM - 8  |  |  |                  |         |        | 10              |
| Write recursive functions to display prime number from 2 to n.   |  |  |                  |         |        |                 |
| PROGRAM - 9  |  |  |                  |         |        | 10              |
| Write a python program that writes a series of random numbers to a file from 1 to n and display.   |  |  |                  |         |        |                 |
| PROGRAM -10  |  |  |                  |         |        | 10              |
| Write a program to calculate student grade   |  |  |                  |         |        |                 |
| PROGRAM -11  |  |  |                  |         |        | 10              |
| Write a python program to make a simple calculator.  |  |  |                  |         |        |                 |
| PROGRAM -12  |  |  |                  |         |        | 10              |
| Write a python program for Linear Search and Binary Search.  |  |  |                  |         |        |                 |
| <b>Total Lecture Hours</b>   |  |  |                  |         |        | <b>90 Hours</b> |

| <b>Course Objectives:</b>  |   |                     |   |         |                 |
| The main objectives of this course are to:   |   |                     |   |         |                 |
| <ol style="list-style-type: none"> <li>1. Identify basic concepts, terminology, theories, models and methods in the field of Data Engineering</li> <li>2. Apply data transformations such as aggregation and filtering for visualization</li> <li>3. Identify opportunities for application of data visualization in various domains.</li> </ol> |   |                     |   |         |                 |
| <b>Expected Course Outcomes:</b>   |   |                     |   |         |                 |
| On the successful completion of the course, student will be able:  |   |                     |   |         |                 |
| 1  | Acquire knowledge on various phases of data engineering                                     |                     |   |         | K1, K2          |
| 2  | Identify necessity of data pre-processing and apply the appropriate procedure               |                     |   |         | K2, K3          |
| 3  | Demonstrate data warehouse schema and process of data retrieval for real time applications. |                     |   |         | K2, K3, K4      |
| <b>K1 - Remember; K2 - Understand; K3 - Apply; K4 - Analyze; K5 - Evaluate; K6 – Create</b>  |   |                     |   |         |                 |
| <b>UNIT:1</b>  | <b>DATA ENGINEERING INTRODUCTION</b>  |                     |   |         | <b>8 Hours</b>  |
| KDD Process – Kinds of data can be mined – Kind of patterns can be mined – Technologies used – Kinds of Applications targeted – Issues in data mining - Data Objects and Attribute Types - Data preprocessing overview – Data Cleaning – Data Integration – Data Reduction – Data Transformation and Discretization                              |   |                     |   |         |                 |
| <b>UNIT:2</b>  | <b>DATA WAREHOUSING</b>   |                     |   |         | <b>10 Hours</b> |
| Data warehouse – Basic Concepts – Modeling - Data cube and OLAP – Data warehouse Design and Usage – Implementation - Data Generalization by Attribute Oriented Induction.  |   |                     |   |         |                 |
| <b>UNIT:3</b>  | <b>DATA MODELING</b>  |                     |   |         | <b>10 Hours</b> |
| Introduction to data modeling-Relational data models-NoSQL data models-Data Pipelines- Data Quality-Production data Pipelines  |   |                     |   |         |                 |
| <b>UNIT:4</b>  | <b>DATA PROCESSING</b>  |                     |   |         | <b>10 Hours</b> |
| ETL basics –Extraction of Data-Extraction Methods-Transportation of data- Transportation mechanisms-ETL Tools-Loading and Transformation. Data Capture-Data warehouse performance-basic query-advanced query-Schema modeling techniques-Analysis and Reporting-OLAP  |   |                     |   |         |                 |
| <b>UNIT:5</b>  | <b>DATA VISUALIZATION</b>   |                     |   |         | <b>10 Hours</b> |
| Data visualization: Introduction, Types of data visualization, Data for visualization: Data types, Data encodings, Retinal variables, mapping variables to encodings, Visual encodings.  |   |                     |   |         |                 |
| <b>Total Lecture hours</b>   |   |                     |   |         | <b>48 hours</b> |

| Pre – requisite   | None  |  |  | Syllabus version | 2023-24 Onward |           |              |
| <b>Course Objectives</b>  |   |  |  |                  |                |           |              |
| <ul style="list-style-type: none"> <li>To expose the student to the fundamental concepts of R Programming</li> </ul>  |   |  |  |                  |                |           |              |
| <b>Expected Course Outcomes</b>   |   |  |  |                  |                |           |              |
| 1   | Understand the basics in R programming in terms of constructs, control statements, string functions |  |  |                  |                |           | K2           |
| 2   | Understand the use of R for Big Data analytics  |  |  |                  |                |           | K2           |
| 3   | Apply R programming for Text processing   |  |  |                  |                |           | K3           |
| 4   | Appreciate and apply the R programming from a statistical perspective                               |  |  |                  |                |           | K3           |
| <b>K1 – Remember K2 – Understand K3 – apply K4- Analyze K5 – evaluate K6- Create</b>  |   |  |  |                  |                |           |              |
| <b>UNIT I</b>   | <b>Introduction to R</b>  |  |  |                  |                |           | <b>18</b>    |
| Introducing to R – R Data Structures – Help Functions in R – Vectors – Scalars – Declarations – Recycling – Common Vector Operations – Using all and any – Vectorized operations – NA and NULL values – Filtering – Vectorised if-then else – Vector Element names.   |   |  |  |                  |                |           |              |
| <b>UNIT II</b>  | <b>Matrices and operations</b>  |  |  |                  |                |           | <b>18</b>    |
| Creating matrices – Matrix Operations – Applying Functions to Matrix Rows and Columns – Adding and deleting rows and columns - Vector/Matrix Distinction – Avoiding Dimension Reduction – Higher Dimensional arrays – lists – Creating lists – General list operations – Accessing list components and values – applying functions to lists – recursive lists.  |   |  |  |                  |                |           |              |
| <b>UNIT III</b>   | <b>Data Frames</b>  |  |  |                  |                |           | <b>18</b>    |
| Creating Data Frames – Matrix-like operations in frames – merging Data frames – Applying functions to Data Frames – Factors and Tables – Factors and levels – Common Functions used with factors – Working with tables – Other factors and table related functions – Control statements – Arithmetic and Boolean operators and values – Default Values for arguments – Returning Boolean Values – Functions are objects – Environment and scope issues – Writing Upstairs – Recursion – Replacement functions – Tools for Composing function code – Math and Simulation in R. |   |  |  |                  |                |           |              |
| <b>UNIT IV</b>  | <b>Classes and Objects</b>  |  |  |                  |                |           | <b>18</b>    |
| S3 Classes – S4 Classes – Managing your objects – Input/output – accessing keyboard and monitor – reading and writing files – accessing the internet – String Manipulation – Graphics – Creating Graphs – Customizing Graphs – Saving Graphs to files – Creating Three-Dimensional plots.   |   |  |  |                  |                |           |              |
| <b>UNIT V</b>   | <b>Modelling in R</b>   |  |  |                  |                |           | <b>18</b>    |
| Interfacing R to other languages – Parallel R – Basic Statistics – Linear Model – Generalized Linear models – Non-linear Models – Time Series and Auto-Correlation – Clustering.  |   |  |  |                  |                |           |              |
| <b>Total Lecture Hours</b>  |   |  |  |                  |                | <b>90</b> | <b>Hours</b> |

### Course Objectives

- To introduce students to the basic concepts and techniques of deep Learning.

### Expected Course Outcomes

|   |  |           |
|---|--|-----------|
| 1 | Understand the basic concepts and techniques of Deep Learning. | <b>K2</b> |
| 2 | To understand and apply the Machine learning principles        | <b>K2</b> |
| 3 | To study the deep learning architectures                       | <b>K2</b> |
| 4 | Explore and create deep learning applications with tensor flow | <b>K3</b> |

**K1 – Remember K2 – Understand K3 – apply K4- Analyze K5 – evaluate K6- Create**

|  |                                   |                 |
|--|-----------------------------------|-----------------|
| <b>UNIT I</b>  | <b>Basics of Neural Network</b>   | <b>18</b>       |
| The Neural Network – Limits of Traditional Computing – Machine Learning – Neuron – FF Neural Networks – Types of Neurons – Softmax output layers |                                   |                 |
| <b>UNIT II</b>   | <b>Variables &amp; Operations</b> | <b>18</b>       |
| Tensor flow – Variables – Operations – Placeholders – Sessions – Sharing Variables – Graphs – Visualization                                      |                                   |                 |
| <b>UNIT III</b>  | <b>Basics of CNN</b>              | <b>19</b>       |
| Convolution Neural Network – Feature Selection – Max Pooling – Filters and Feature Maps – Convolution Layer – Applications                       |                                   |                 |
| <b>UNIT IV</b>   | <b>Basics of RNN</b>              | <b>17</b>       |
| Recurrent Neural Network – Memory cells – sequence analysis – word2vec- LSTM - Memory augmented Neural Networks – NTM—Application                |                                   |                 |
| <b>UNIT V</b>  | <b>Reinforcement Learning</b>     | <b>18</b>       |
| Reinforcement Learning – MDP – Q Learning – Applications   |                                   |                 |
| <b>Total Lecture Hours</b>   |                                   | <b>90 Hours</b> |

## Semester - VI

| Course Code   | Linux and Shell Programming   |  | L                | T | P               | C         |
|---|---|--|------------------|---|-----------------|-----------|
| Core/elective/Supportive  | Core : 10   |  | 6                | 0 | 0               | 4         |
| Pre - requisite   | Basic knowledge about Operating Systems   |  | Syllabus version |   | 2023-24 Onward  |           |
| <b>Course Objectives</b>  |   |  |                  |   |                 |           |
| <ul style="list-style-type: none"> <li>To introduce the concepts of Linux operating system</li> <li>To explain the various constructs associated with Linux</li> </ul>  |   |  |                  |   |                 |           |
| <b>Expected Course Outcomes</b>   |   |  |                  |   |                 |           |
| 1   | Illustrate the various directory and file commands in LINUX   |  |                  |   |                 | K2        |
| 2   | Explain the methods of securing files in Linux  |  |                  |   |                 | K2        |
| 3   | Explain the various kernel components of Linux  |  |                  |   |                 | K2        |
| 4   | Apply the various commands of Linux to perform several operations   |  |                  |   |                 | K3        |
| 5   | Solve various network administrative issues by writing Linux shell scripts  |  |                  |   |                 | K3        |
| <b>K1 – Remember K2 – Understand K3 – apply K4- Analyze K5 – evaluate K6- Create</b>  |   |  |                  |   |                 |           |
| <b>UNIT I</b>   | <b>Introduction to Linux</b>  |  |                  |   |                 | <b>15</b> |
| Introduction to LINUX Operating System: Introduction - The LINUX Operating System - Basic commands in Linux   |   |  |                  |   |                 |           |
| <b>UNIT II</b>  | <b>Managing Files &amp; Directories</b>   |  |                  |   |                 | <b>18</b> |
| Managing Files and Directories: Introduction – Directory Commands in LINUX – File Commands in LINUX. Creating files using the vi editor: Text editors – The vi editor. Managing Documents: Locating files in LINUX – Standard files – Redirection – Filters – Pipes.  |   |  |                  |   |                 |           |
| <b>UNIT III</b>   | <b>Shell script</b>   |  |                  |   |                 | <b>20</b> |
| Securing files in LINUX: File access permissions – viewing File access permissions – Changing File access permissions. Automating Tasks using Shell Scripts: Introduction – Variables- Local and Global Shell variables – Command Substitution.   |   |  |                  |   |                 |           |
| <b>UNIT IV</b>  | <b>Conditional &amp; Looping Statements</b>   |  |                  |   |                 | <b>19</b> |
| Using Conditional Execution in Shell Scripts: Conditional Execution – The case...esac Construct. Managing repetitive tasks using Shell Scripts: Using Iteration in Shell Scripts – The while construct – until construct – for construct – break and continue commands – Simple Programs using Shell Scripts. |   |  |                  |   |                 |           |
| <b>UNIT V</b>   | <b>Kernel &amp; System Recovery</b>   |  |                  |   |                 | <b>18</b> |
| Linux Kernel- Kernel Components- compiling a kernel- Customizing a kernel – system startup- Customizing the boot process-System Recovery  |   |  |                  |   |                 |           |
| <b>Total Lecture Hours</b>  |   |  |                  |   | <b>90 Hours</b> |           |
| <b>Text Book(s)</b>   |   |  |                  |   |                 |           |
| 1   | Operating System LINUX, NIIT, PHI, 2006, Eastern Economy Edition.   |  |                  |   |                 |           |
| <b>Reference Book(S)</b>  |   |  |                  |   |                 |           |
| 1   | Richard Petersen, Linux: The Complete Reference, Sixth Edition, Tata McGraw-Hill Publishing Company Limited, New Delhi, Edition 2008. |  |                  |   |                 |           |
|   |   |  |                  |   |                 |           |

| <b>Course Objectives</b>   |  |  |                  |   |         |           |
| To introduce the concepts of Linux operating system commands execution and various programming construction in Linux shell script.                     |  |  |                  |   |         |           |
| <b>Expected Course Outcomes</b>  |  |  |                  |   |         |           |
| 1  | To create the directory, how to change and remove the directory.   |  |                  |   |         | <b>K1</b> |
| 2  | To evaluate the concept of shell scripting programs by using an AWK and SED Commands                               |  |                  |   |         | <b>K2</b> |
| 3  | To demonstrate the basic knowledge of Linux commands and file handling utilities by using Linux shell environment. |  |                  |   |         | <b>K3</b> |
| <b>K1 – Remember K2 – Understand K3 – apply K4- Analyze K5 – evaluate K6- Create</b>   |  |  |                  |   |         |           |
| <b>EXERCISE 1</b>  |  |  |                  |   |         | <b>6</b>  |
| Write a Shell script that displays list of all the files in the current directory to which the user has read, write and execute permissions.           |  |  |                  |   |         |           |
| <b>EXERCISE 2</b>  |  |  |                  |   |         | <b>6</b>  |
| Write an awk script to find the number of characters, words and lines in a file?   |  |  |                  |   |         |           |
| <b>EXERCISE 3</b>  |  |  |                  |   |         | <b>9</b>  |
| Write a Shell script that accepts a filename, starting and ending line numbers as arguments and displays all the lines between the given line numbers? |  |  |                  |   |         |           |
| <b>EXERCISE 4</b>  |  |  |                  |   |         | <b>9</b>  |
| Write a shell script to sort number in ascending order.  |  |  |                  |   |         |           |
| <b>EXERCISE 5</b>  |  |  |                  |   |         | <b>12</b> |
| Write a shell script (small calculator) that adds, subtracts, multiplies and divides the two given numbers.  |  |  |                  |   |         |           |
| <b>EXERCISE 6</b>  |  |  |                  |   |         | <b>9</b>  |
| Write a shell script to determine whether a given number is a prime number or not.   |  |  |                  |   |         |           |
| <b>EXERCISE 7</b>  |  |  |                  |   |         | <b>12</b> |
| Write a shell script to print the first n Fibonacci numbers.   |  |  |                  |   |         |           |
| <b>EXERCISE 8</b>  |  |  |                  |   |         | <b>9</b>  |
| Write a shell script to find the GCD of two given numbers.   |  |  |                  |   |         |           |
| <b>EXERCISE 9</b>  |  |  |                  |   |         | <b>9</b>  |
| Write a shell script to check whether given string is palindrome or not.   |  |  |                  |   |         |           |
| <b>EXERCISE 10</b>   |  |  |                  |   |         | <b>9</b>  |
| Write a shell script to find the factorial of given integer.   |  |  |                  |   |         |           |
| <b>Total Lecture Hours</b>   |  |  |                  |   |         | <b>90</b> |

| Pre - requisite   | Students should have the strong knowledge in any one of the programming languages in this course.  |                  | Syllabus version | 2023-24 Onward |   |                   |
| <b>Course Objectives</b>  |  |                  |                  |                |   |                   |
| The main objectives of this course are to:  |  |                  |                  |                |   |                   |
| <ul style="list-style-type: none"> <li>● To understand and select the task based on their core skills.</li> <li>● To get the knowledge about analytical skill for solving the selected task.</li> <li>● To get confidence for implementing the task and solving the real time problems.</li> <li>● Express technical and behavioral ideas and thought in oral settings.</li> <li>● Prepare and conduct oral presentations</li> </ul>  |  |                  |                  |                |   |                   |
| <b>Expected Course Outcomes</b>   |  |                  |                  |                |   |                   |
| On the successful completion of the course, student will be able to:  |  |                  |                  |                |   |                   |
| 1   | Formulate a real world problem and develop its requirements develop a design solution for a set of requirements  |                  |                  |                |   | <b>K3</b>         |
| 2   | Test and validate the conformance of the developed prototype against the original requirements of the problem  |                  |                  |                |   | <b>K5</b>         |
| 3   | Work as a responsible member and possibly a leader of a team in developing software Solutions  |                  |                  |                |   | <b>K3</b>         |
| 4   | Express technical ideas, strategies and methodologies in written form. Self-learn new tools, algorithms and techniques that contribute to the software solution of the project |                  |                  |                |   | <b>K1-<br/>K4</b> |
| 5   | Generate alternative solutions, compare them and select the optimum one  |                  |                  |                |   | <b>K6</b>         |
| <b>K1 – Remember K2 – Understand K3 – apply K4- Analyze K5 – evaluate K6- Create</b>  |  |                  |                  |                |   |                   |
| <b>Aim of the project work</b>  |  |                  |                  |                |   |                   |
| <p>1. The aim of the project work is to acquire practical knowledge on the implementation of the programming concepts studied.</p> <p>2. Each student should carry out individually one project work and it may be a work using the software packages that they have learned or the implementation of concepts from the papers studied or implementation of any innovative idea focusing on application oriented concepts.</p> <p>3. The project work should be compulsorily done in the college only under the supervision of the department staff concerned.</p> <p><b>Viva Voce</b></p> <p>1. Viva-Voce will be conducted at the end of the year by both Internal (Respective Guides) and External Examiners, after duly verifying the Annexure Report available in the College, for a total of 200 marks at the last day of the practical session.</p> <p>2. Out of 200 marks, 160 marks for project report and 40 marks for Viva Voce.</p> |  |                  |                  |                |   |                   |

| <b>Course Objectives</b>   |  |                               |                         |                       |          |           |
| <ul style="list-style-type: none"> <li>To explain about the basics of machine learning</li> </ul>  |  |                               |                         |                       |          |           |
| <b>Expected Course Outcomes</b>  |  |                               |                         |                       |          |           |
| 1  | Understanding of the fundamental issues and challenges of machine learning: data, model selection, model complexity, etc.                                      |                               |                         |                       |          | <b>K2</b> |
| 2  | Understanding of the strengths and weaknesses of many popular machine learning approaches.   |                               |                         |                       |          | <b>K2</b> |
| 3  | Explain about the concepts of computational learning theory and dimensionality Reduction   |                               |                         |                       |          | <b>K2</b> |
| 4  | Appreciate the underlying mathematical relationships within and across Machine Learning algorithms and the paradigms of supervised and un-supervised learning. |                               |                         |                       |          | <b>K3</b> |
| <b>K1 – Remember K2 – Understand K3 – apply K4- Analyze K5 – evaluate K6- Create</b>   |  |                               |                         |                       |          |           |
| <b>UNIT I</b>  | <b>Introduction to Learning</b>  |                               |                         |                       |          | <b>12</b> |
| Algorithmic models of learning, Learning classifiers, functions, relations, grammars, probabilistic models, value functions, behaviors and programs for experience. Bayesian, maximum a posteriori, and minimum description length frameworks.   |  |                               |                         |                       |          |           |
| <b>UNIT II</b>   | <b>Learning Models</b>   |                               |                         |                       |          | <b>12</b> |
| Parameter Estimation, sufficient statistics, decision trees, neural networks, support vector machines, Bayesian networks, bag of words classifiers, N-gram models; Markov and Hidden Markov models, probabilistic relational models, association rules, nearest neighbor classifiers, locally weighted regression, ensemble classifiers. |  |                               |                         |                       |          |           |
| <b>UNIT III</b>  | <b>Computational Learning</b>  |                               |                         |                       |          | <b>12</b> |
| Computational Learning theory, mistake bound analysis, sample complexity analysis, VC dimension, Occam learning, accuracy and confidence boosting, Dimensionality reduction: Principal component Analysis, feature selection and visualization.  |  |                               |                         |                       |          |           |
| <b>UNIT IV</b>   | <b>Unsupervised Learning</b>   |                               |                         |                       |          | <b>12</b> |
| Unsupervised Learning: Clustering, mixture models, k-means clustering, hierarchical clustering, distributional clustering, Reinforcement learning; Learning from heterogeneous, distributed, data and knowledge.   |  |                               |                         |                       |          |           |

|  |   |                     |
|--|---|---------------------|
| <b>UNIT V</b>  | <b>Learning Applications</b>  | <b>12</b>           |
| Selected applications in data mining, automated knowledge acquisition, pattern recognition, program synthesis, text and language processing, internet-based information systems, human computer interaction, semantic web, and bioinformatics and computational biology. |   |                     |
| <b>Total Lecture Hours</b>   |   | <b>60<br/>Hours</b> |
