# B.Sc. Computer Science & Applications

## Syllabus

## **AFFILIATED COLLEGES**

**Program Code: 28D** 

2025 - 2026 onwards

### BHARATHIAR UNIVERSITY

(A State University, Accredited with "A++" Grade by NAAC, Ranked 21st among Indian Universities by MHRD-NIRF)

Coimbatore - 641 046, Tamil Nadu, India

Program	Educational Objectives (PEOs)
The <b>B. So</b>	c. Computer Science and Applications program describe accomplishments
that gradu	nates are expected to attain within five to seven years after graduation
	Graduates of the program will be engaged in the computing profession, and
PEO1	will be engaged in learning, understanding, and applying new ideas and
	technologies as the field evolves.
PEO2	To Design, implement, and evaluate a computing-based solution to meet a given
FLO2	set of computing requirements in the context of the program's discipline.
	Possess an attitude and aptitude for research, entrepreneurship and higher
PEO3	studies in the field of Computer Science & Engineering and Information
	Technology.
PEO4	Able to provide socially acceptable technical solutions to real world problems
I LO4	with the application of modern and appropriate programming techniques.
	Possess better communication, presentation, time management and team work
PEO5	skills leading to responsible & competent professionals and will be able to
	address challenges in the field of IT at global level.

Program	Specific Outcomes (PSOs)
After the	successful completion of <b>B.Sc. Computer Science Applications</b> program, the
students	are expected to
PSO1	To impart education with clear knowledge of the fundamentals and applied aspects of Computer Science and engineering.
PSO2	To Design next-generation computer systems, networking devices, search engines, soft computing and intelligent systems, web browsers, and knowledge discovery tools.
PSO3	To expose the students to open Source technologies so that they become familiar with it and can seek appropriate opportunity in trade and industry.
PSO4	Ability to apply mathematical methodologies to solve computation task, model real world problem using appropriate data structure and suitable algorithm
PSO5	To inculcate effective communication skills combined with professional & ethical attitude.

Program	Outcomes (POs)
On succe	ssful completion of the B.Sc. Computer Science Applications program
PO1	<b>Disciplinary knowledge:</b> Capable to apply the knowledge of mathematics, algorithmic principles and computing fundamentals in the modeling and design of computer based systems of varying complexity.
PO2	<b>Scientific reasoning/ Problem analysis</b> : Ability to critically analyze, categorizes, formulate and solve the problems that emerges in the field of computer science.
PO3	<b>Problem solving:</b> Able to provide software solutions for complex scientific and business related problems or processes that meet the specified needs with appropriate consideration for the public health and safety and the cultural, societal and environmental considerations.
PO4	<b>Environment and sustainability:</b> Understand the impact of software solutions in environmental and societal context and strive for sustainable development.
PO5	<b>Modern tool usage:</b> Use contemporary techniques, skills and tools necessary for integrated solutions.
PO6	<b>Ethics:</b> Function effectively with social, cultural and ethical responsibility as an individual or as a team member with positive attitude.
PO7	<b>Cooperation / Team Work:</b> Function effectively as member or leader on multidisciplinary teams to accomplish a common objective.
PO8	<b>Communication Skills:</b> An ability to communicate effectively with diverse types of audience and also able to prepare and present technical documents to different groups.
PO9	Self-directed and Life-long Learning: Graduates will recognize the need for self-motivation to engage in lifelong learning to be in par with changing technology.
PO10	Enhance the research culture and uphold the scientific integrity and objectivity

#### **BHARATHIAR UNIVERSITY: COIMBATORE 641 046**

#### **B.Sc. Computer Science and Applications (CBCS PATTERN)**

(For the students admitted from the academic year 2025-2026 onwards)

#### **Scheme of Examination**

			]	Examination				
Part	Title of the Course	Hours/ Week	Duration	Maxi	mum Ma	rks	Credits

*	No Continuous Internal Assessment (CIA), University Examinations Only.
**	No University Examinations, Continuous Internal Assessment (CIA) Only.
***	Naan Mudhalvan – Skill courses- external marks (CEE) will be assessed by industry and internal
	will be offered by respective course teacher.
****	No University Examinations, Continuous Internal Assessment (CIA) Only will be handled by
	Department of Physical Education (PD)
	Summer Internship / Industrial Training during the Summer Vacation in II Year, IV Semester for 30
****	hours. The capstone project report to be prepared and it should be submitted during viva-voce. (Refer
	Project Guidelines)

Course code		<b>Programming Concepts in C</b>						Т		P	C
Core/Elective/St	Core Paper: I						0		0	4	
Pre-requisite		Students Knowledg	should ge	have	basic	Computer	Syllab Versio		202	25-2	26

The main objectives of this course are to:

- 1. To impart knowledge about Computer fundamentals
- 2. To understand the concepts and techniques in C Programming
- 3. To equip and indulge themselves in problem solving using C

#### **Expected Course Outcomes:**

On the successful completion of the course, student will be able to:

On	the successful completion of the course, student will be able to.	
1	Learn about the Computer fundamentals and the Problem solving	K2
2	Understand the basic concepts of C programming	K2
3	Describe the reason why different decision making and loop constructs are available for iteration in C	К3
4	Demonstrate the concept of User defined functions, Recursions, Scope and Lifetime of Variables, Structures and Unions	K4
5	Develop C programs using pointers Arrays and file management	К3

K1 - Remember; K2 - Understand; K3 - Apply; K4 - Analyze; K5 - Evaluate; K6 - Create

#### Unit:1 Fundamentals of Computers & Problem Solving in C 15 hours

Fundamentals of Computers: Introduction – History of Computers-Generations of Computers-Classification of Computers-Basic Anatomy of a Computer System-Input Devices-Processor-Output Devices-Memory Management – Types of Software- Overview of Operating System-Programming Languages-Translator Programs-Problem Solving Techniques - Overview of C.

#### Unit:2 Overview of C 15 hours

Overview of C - Introduction - Character set - C tokens - keyword & Identifiers - Constants - Variables - Data types - Declaration of variables - Assigning values to variables - Defining Symbolic Constants - Arithmetic, Relational, Logical, Assignment, Conditional, Bitwise, Special, Increment and Decrement operators - Arithmetic Expressions - Evaluation of expression - precedence of arithmetic operators - Type conversion in expression - operator precedence & associativity - Mathematical functions - Reading & Writing a character - Formatted input and output.

#### Unit:3 Decision Making, Looping and Arrays 15 hours

Decision Making and Branching: Introduction – if, if....else, nesting of if ...else statements- else if ladder – The switch statement, The ?: Operator – The goto Statement. Decision Making and Looping: Introduction- The while statement- the do statement – the for statement-jumps in loops. Arrays – Character Arrays and Strings

#### Unit:4 User-Defined Functions, Structures and Unions 15 hours

User-Defined Functions: Introduction – Need and Elements of User-Defined Functions-Definition-Return Values and their types - Function Calls – Declarations – Category of Functions- Nesting of Functions - Recursion – Passing Arrays and Strings to Functions - The Scope, Visibility and Lifetime of Variables- Multi file Programs. Structures and Unions

Unit:5	12 hours	
Pointers: Intro	oduction-Understanding pointers -Accessing the address of a	variable Dec

Pointers: Introduction-Understanding pointers -Accessing the address of a variable Declaration and Initialization of pointer Variable – Accessing a variable through its pointer Chain of pointers-Pointer Expressions – Pointer Increments and Scale factor- Pointers and Arrays- Pointers and Strings – Array of pointers – Pointers as Function Arguments Functions returning pointers – Pointers to Functions – Pointers and Structures. File Management in C.

Unit:6	Contemporary Issues	3 hours
Problem Solv	ing through C Programming - Edureka	

Total 75 hours

Course code	Digital Fundamentals and Computer Architecture	L	T	P	C
Core/Elective/Supportiv	e Core Paper : II	5	0	-	4
Pre-requisite	Student should have basic computer knowledge	Syllabus Version		2025 Onv	5-26 vards

On successful completion of this subject the students should have Knowledge on

- 1. To familiarize with different number systems and digital arithmetic & logic circuits
- 2. To understand the concepts of Combinational Logic and Sequential Circuits
- 3. To impart the knowledge of buses, I/O devices, flip flops, Memory and bus structure.
- 4. To understand the concepts of memory hierarchy and memory organization
- 5. To understand the various types of microprocessor architecture

#### **Expected Course Outcomes:**

On the successful completion of the course, student will be able to:

On the successful completion of the course, student will be able to.					
1	Learn the basic structure of number system methods like binary, octal and hexadecimal and understand the arithmetic and logical operations are performed by computers.	К3			
2	Define the functions to simplify the Boolean equations using logic gates.	K1			
3	Understand various data transfer techniques in digital computer and control unit operations.	K2			
4	Compare the functions of the memory organization	K4			
5	Analyze architectures and computational designs concepts related to architecture organization and addressing modes	<b>K</b> 4			

K1 - Remember; K2 - Understand; K3 - Apply; K4 - Analyze; K5 - Evaluate; K6 - Create

Unit:1 Number System and Gates 15 hours

**Number System and Gates** Number System and Binary Codes: Decimal, Binary, Octal, Hexadecimal – Binary addition, Multiplication and Division – Floating point representation, Complements of a Binary Number, BCD, Excess3, Gray Code. **Logic Gates**: The Basic Gates – NOR, NAND, XOR Gates.

Unit:2 Combinational and Logic Circuits 15 hours

**Combinational and Logic Circuits**: Boolean algebra Demorgan's Theroms, Karnaugh map – Canonical form Construction and properties.—Implicants— Don't care combinations - Product of sum, Sum of products Simplifications.

Unit:3 Arithmetic and Sequential Circuits 15 hours

**Arithmetic Circuits**: Half adder, Full adder, Parallel binary adder, BCD adder, Half subtractor, Full subtractor, Parallel binary subtractor. **Sequential Circuits**: Flip-Flops: RS, D, JK and T – Shift Registers- Decoder- Encoder - Multiplexers – DE multiplexers — Counters – Asynchronous Counter - synchronous Counter.

Unit:4 **Input – Output Organization** 15 hours **Input – Output Organization**: Input – output interface – I/O Bus and Interface – I/O Bus Versus Memory Bus – Isolated Versus Memory – Mapped I/O – Example of I/O Interface. Asynchronous data transfer: Strobe Control and Handshaking – Priority Interrupt: Daisy- Chaining Priority, Parallel Priority Interrupt. Direct Memory Access: DMA Controller, DMA Transfer. Input – Output Processor: CPU-IOP Communication. Unit:5 **Memory Organization** 13 hours Memory Organization: Memory Hierarchy – Main Memory- Associative memory: Hardware Organization, Match Logic, Read Operation, Write Operation. Cache Memory: Associative, Direct, Set-associative Mapping – Writing into Cache Initialization. Virtual Memory: Address Space and Memory Space, Address Mapping Using Pages, Associative Memory, Page Table, Page Replacement. Unit:6 **Contemporary Issues** 2 hours Expert lectures, online seminars - webinars Total 75 hours Text Book(s) Digital Electronics Circuits and Systems, V.K. Puri, TMH Computer System Architecture -M. Morris Mano, PHI. Microprocessors and its Applications-Ramesh S. Goankar

Course code		Programming Lab – C	L	T	P	C
Core/Elective/Supportive		Core Lab: I	0	0	4	2
Pre-requisite		Students should have basic knowledge in C programming and algorithms	Syllabi Versio		2025 Onw	5-26 vards

The main objectives of this course are to:

- 1. To practice the Basic concepts, Branching and Looping Statements and Strings in C programming
- 2. To implement and gain knowledge in Arrays, functions, Structures, Pointers and File handling

#### **Expected Course Outcomes:**

On the successful completion of the course, student will be able to:

	<u> </u>	
1	Remember and Understand the logic for a given problem and to generate Prime	K1, K2
	numbers & Fibonacci Series ( <b>Program-1,2,3</b> )	
2	Apply the concepts to print the Magic square, Sorting the data, Strings, Recursive	K2, K3
	functions and Pointers ( <b>Program-4,5,6,8,10</b> )	
3	Remember the logic used in counting the vowels in a sentence ( <b>Program-7</b> )	K1
4	Apply and Analyze the concepts of Structures and File management	
	(Program-9,11,12)	K3&K4

K1 - Remember; K2 - Understand; K3 - Apply; K4 - Analyze; K5 - Evaluate; K6 - Create

#### **Programs**

- 1. Write a C program to find the sum, average, standard deviation for a given set of numbers.
- 2. Write a C program to generate n prime numbers.
- 3. Write a C program to generate Fibonacci series.
- 4. Write a C program to print magic square of order n where n > 3 and n is odd.
- 5. Write a C program to sort the given set of numbers in ascending order.
- 6. Write a C program to check whether the given string is a palindrome or not using pointers.
- 7. Write a C program to count the number of Vowels in the given sentence.
- 8. Write a C program to find the factorial of a given number using recursive function.
- 9. Write a C program to print the students Mark sheet assuming roll no, name, and marks in 5 subjects in a structure. Create an array of structures and print the mark sheet in the university pattern.
- 10. Write a function using pointers to add two matrices and to return the resultant matrix to the calling function.
- 11. Write a C program which receives two filenames as arguments and check whether the file contents are same or not. If same delete the second file
- 12. Write a program which takes a file as command line argument and copy it to another file. At the end of the second file write the total i) no of chars ii) no. of words and iii) no. of lines.

Course code	OOPs with Java Programming		T	P	C
Core/Elective/Supportive	Core Paper: III	6	0	0	4
Pre-requisite	The objective of the course is to train the students to acquire problem-solving skills through object oriented programming	Sylla Vers			25-26 wards

The main objectives of this course are to:

- 1. To expose the students with the introduction to OOPs and advantages of object oriented programming.
- 2. The concepts of OOPs make it easy to represent real world entities.
- 3. The course introduces the concepts of converting the real time problems into objects and methods and their interaction with one another to attain a solution.
- 4. Simultaneously it provides the syntax of programming language Java for solving the real world problems.

#### **Expected Course Outcomes:**

On the successful completion of the course, student will be able to:

L		1 '	
	1	The competence and the development of small to medium sized application	K1-K2
		programs that demonstrate professionally acceptable coding	131-132
	2	Demonstrate the concept of object oriented programming through Java	K2-K4
	3	Apply the concept of Inheritance, Modularity, Concurrency, Exceptions handling	W2
		and data persistence to develop java program	K3
	4	Develop java programs for applets and graphics programming	К3
	5	Understand the fundamental concepts of AWT controls, layouts and	K1-K2
1		events	

K1 - Remember; K2 - Understand; K3 - Apply; K4 - Analyze; K5 - Evaluate; K6 - Create

Unit:1	FUNDAMENTALS OF OBJECT-ORIENTED	15 hours
	PROGRAMMING	

Object-Oriented Paradigm – Basic Concepts of Object-Oriented Programming – Benefits of Object-Oriented Programming –Application of Object-Oriented Programming. Java Evolution: History – Features – How Java differs from C and C++ – Java and Internet – Java and www –Web Browsers. Overview of Java: simple Java program – Structure – Java Tokens – Statements – Java Virtual Machine.

#### Unit:2 BRANCHING AND LOOPING 18 hours

Constants, Variables, Data Types - Operators and Expressions – Decision Making and Branching: if, if...else, nested if, switch, ? : Operator - Decision Making and Looping: while, do, for – Jumps in Loops - Labeled Loops – Classes, Objects and Methods.

Unit:3	ARRAYS AND INTERFACES	18 hours
Arrays, Strin	gs and Vectors - Interfaces: Multiple Inheritance - Packages:	Putting Classes
together – Mu	lltithreaded Programming.	

Unit:4	ERROR HANDLING	18 hours
Managing Err	$ors\ and\ Exceptions-Applet\ Programming-Graphics\ Programm$	ing.

Unit:5	MANAGING INPUT / OUTPUT FILES IN JAVA 18 hours							
Concepts of	Streams- Stream Classes – Byte Stream classes – Character strea	m classes – Using						
	O Classes – File Class – I/O exceptions – Creation of files – I	Reading / Writing						
characters, B	yte-Handling Primitive data Types – Random Access Files.							
Unit:6	Contemporary Issues	3 hours						
Expert lectur	es, online seminars - webinars	_						
	Total Lecture hours	90 hours						
Text Book(s)

Course code		Programming Lab – JAVA		Т	P	C
Core/Elective/Supportive		Core Lab: II	0	0	5	2
Pre-requisite		Students should know about the OOPs concept and basic knowledge in java theory.	Sylla Versi			5-26 vards

The main objectives of this course are to:

- 1. The main objective of JAVA Programming Lab is to provide the students a strong foundation on programming concepts and its applications through hands-on training.
- 2. To practice the Basic concepts, Branching and Looping Statements and Strings in C programming
- 3. To implement and gain knowledge in Arrays, functions, Structures, Pointers and File handling

#### **Expected Course Outcomes:**

On the successful completion of the course, student will be able to:

	1						
1	Understand the basic concepts of Java Programming with emphasis on ethics and	K1, K2					
	principles of professional coding						
2	Demonstrate the creation of objects, classes and methods and the						
	concepts of constructor, methods overloading, Arrays, branching						
	and looping						
3	Create data files and Design a page using AWT controls and Mouse Events in Java	K2, K3					
	programming Implement the concepts of code reusability and debugging.						
4	Develop applications using Strings, Interfaces and Packages and applets	К3					
5	Construct Java programs using Multithreaded Programming and	К3					
	Exception Handling						

K1 - Remember; K2 - Understand; K3 - Apply; K4 - Analyze; K5 - Evaluate; K6 - Create

Programs 36 hours

- 1. Write a Java Program for Factorial of a number using command-line arguments.
- 2. Write a Java Program to create a switch statement to print the day according to their equivalent number.
- 3. Write a java program to sort the array integer elements in descending order.
- 4. Write a Java program to implement method overloading.
- 5. Write a Java program to implement method overriding.
- 6. Write a Java program to implement Abstract class with an abstract method.
- 7. Write a program to count the Characters, Digits and Special Characters from the given String.
- 8. Write a Java program to implement Vector Operations.
- 9. Write a Java Program to implement the concept of Multiple Inheritance using Interfaces.
- 10. Write a Java program to implement a Arithmetic and Array Index Out of Bound Exception.
- 11. Write a Java Program to create a user define Exception called Pay Out of Bound and throw the Exception.
- 12. Write a Java Program to implement the concept of Multithreading with the use of any three multiplication tables and assign three different priorities to them.
- 13. Write a Java Applet Program to draw several shapes using Paint method..
- 14. Write a Java Program to draw circle, square, ellipse and rectangle at the mouse click positions.
- 15. Write a Java Program which open an existing file and append text to that file.

Course code	Office Automation and Internet	L	T	P	C
Core/Elective/Supportive	Core Lab : III	0	0	3	2
Pre-requisite	Basic Knowledge of Office Automation Tools	Sylla Versi			25-26 wards

The main objectives of this course are to:

- 1. Acquire and apply the computer applications in different aspects.
- 2. Get an insight knowledge on office automation.
- 3. Know the database maintenance in every type of applications.
- 4. Get the knowledge in effective power point presentation.
- 5. Impart knowledge and essential skills necessary to use the internet.

#### **Expected Course Outcomes:**

On the successful completion of the course, student will be able to:

1	Understand the fundamentals of Internet and the Web concepts	K2
2	Create and apply various statistical tools available in excel.	K3,K6
3	To gain knowledge making effective presentation using power point presentation	K4
4	Understand the basic concepts and evaluate the database using excel.	K5

K1 - Remember; K2 - Understand; K3 - Apply; K4 - Analyze; K5 - Evaluate; K6 - Create

Programs 36 hours

- 1. Prepare your resume in word and assume that you are studying in final year of your graduation and are eagerly looking for a job. Visit any job portal and upload your resume.
- 2. Create a flowchart for any program use proper shapes like ellipse, arrows, rectangle, parallelogram and grouping to group all the parts of the flowchart into one single object.
- 3. Create a simple mathematical calculations using formulas in excel sheet.
- 4. Prepare students mark list for your class and calculate Total, Average, Result and Ranking by using arithmetic, logical functions and sorting using excel sheet.
- 5. Create different types of charts for a range in students mark list using excel sheet.
- 6. Create a power-point presentation with minimum 10 slides
  - The first slide must contain the topic of the presentation and name of the presentation.
  - a. At least one table,5 bullets,5 numbers, font size, font face, font color.
  - b. Use word art to write the heading for each slides. Insert at least one clip-art, one picture, one audio and one video.
  - c. Use custom animation option to animate the text, move left to right one line at a time and Use proper transition for the slides.
  - d. Last slide must contain thank you.
- 7. Open your inbox in the Gmail account created, check the mail received from your peer from other college inviting you for his college fest, and download the invitation. Reply to the mail with a thank you note for the invite and forward the mail to other friends.
- 8. Create your own Google classroom and invite all your friends through email id. Post study material in Google classroom using Google drive. Create a separate folder for every subject and upload all unit wise E-Content Materials.
- 9. Create and share a folder in Google Drive using 'share a link' option and set the permission to access that folder by your friends only.
- 10. Create poster for Department Seminar or Conference using any open source tools.

Course code	Data Structures	L	T	P	C
Core/Elective/Supportive	Core Paper: IV	4	0	0	4
Pre-requisite	Basic understanding of Data storage, retrieval and algorithms.	Syllabus Version		2025-26 onwards	

The main objectives of this course are to:

- 1. To introduce the fundamental concept of data structures
- 2. To emphasize the importance of data structures in developing and implementing efficient algorithms.
- 3. Understand the need for Data Structures when building application
- 4. Ability to calculate and measure efficiency of code
- 5. Improve programming logic skills.

#### **Expected Course Outcomes:**

On the successful completion of the course, student will be able to:

On	on the successful completion of the course, student will be use to.						
1	Understand the basic concepts of data structures and algorithms						
2	Construct and analyze of stack and queue operations with illustrations	K2-K4					
3	Enhance the knowledge of Linked List and dynamic storage management.	K2-K3					
4	Demonstrate the concept of trees and its applications	K2-K3					
5	Design and implement various sorting and searching algorithms for applications and understand the concept of file organizations	K1-K4					

K1 - Remember; K2 - Understand; K3 - Apply; K4 - Analyze; K5 - Evaluate; K6 - Create

#### Unit:1 INTRODUCTION

12 hours

Introduction of Algorithms, Analysing Algorithms. Arrays: Sparse Matrices - Representation of Arrays. Stacks and Queues. Fundamentals - Evaluation of Expression Infix to Postfix Conversion - Multiple Stacks and Queues

Unit:2 LINKED LIST 12 hours

Linked List: Singly Linked List - Linked Stacks and Queues - Polynomial Addition- More on Linked Lists - Sparse Matrices - Doubly Linked List and Dynamic - Storage Management - Garbage Collection and Compaction.

Unit:3 TREES 12 hours

Basic Terminology - Binary Trees - Binary Tree Representations - Binary Trees-Traversal-More On Binary Trees - Threaded Binary Trees - Binary Tree. Representation of Trees - Counting Binary Trees. Graphs: Terminology and Representations-Traversals, Connected Components and Spanning Trees, Shortest Paths and Transitive Closure

Unit:4 EXTERNAL SORTING 12 hours

Storage Devices -Sorting with Disks: K-Way Merging — Sorting with Tapes Symbol Tables: Static Tree Tables - Dynamic Tree Tables - Hash Tables: Hashing Functions - Overflow Handling.

		CAA DATED: 09.07
Unit:5	INTERNAL SORTING	10 hours
Insertion S	ort - Quick Sort - 2 Way Merge Sort - Heap Sort - Shell Sort	- Sorting on Several
Keys. Files	: Files, Queries and Sequential organizations – Index Techniques	-File Organizations.
Unit:6	2 hours

Course code		RDBMS Programming	L	T	P	C
Core/Elective/S	upportive	Core Paper: V	5	0	0	4
Pre-requisite		Basic knowledge about the data, table and database in computers	Syllab Versio			25-26 wards

The main objectives of this course are to:

- 1. The course describes the data, organizing the data in database, database administration.
- 2. To grasp the different issues involved in the design of a database system.
- 3. To study the physical and logical database designs and database modeling like relational, Hierarchical, network models, database security, integrity and normalization.
- 4. It also gives introduction to SQL language to retrieve the data from the database with suitable application development.
- 5. Provide strong foundation of database concepts and to introduce students to application development in DBMS.

#### **Expected Course Outcomes:**

On the successful completion of the course, student will be able to:

On	the successful completion of the course, student will be use to.	
1	Understand the basic concepts of Relational Data Model, Entity- Relationship Model and process of Normalization	K1-K2
2	Understand and construct database using Structured Query Language (SQL) in Oracle9i environment.	K1-K3
3	Learn basics of PL/SQL and develop programs using Cursors, Exceptions, Procedures and Functions.	K1-K4
4	Understand and use built-in functions and enhance the knowledge of handling multiple tables	K1-K3
5	Attain a good practical skill of managing and retrieving of data using  Data Manipulation Language (DML)	K2-K4

K1 - Remember; K2 - Understand; K3 - Apply; K4 - Analyze; K5 - Evaluate; K6 - Create

Unit:1 DATABASE CONCEPTS 15 hours

Database Concepts: A Relational approach: Database – Relationships – DBMS – Relational Data Model – Integrity Rules – Theoretical Relational Languages. Database Design: Data Modeling and Normalization: Data Modeling – Dependency – Database Design – Normal forms – Dependency Diagrams – De -normalization – Another Example of Normalization.

Unit:2 ORACLE9i 15 hours

Oracle9i: Overview: Personal Databases – Client/Server Databases – Oracle9i an introduction – SQL \*Plus Environment – SQL – Logging into SQL \*Plus - SQL \*Plus Commands – Errors & Help – Alternate Text Editors - SQL \*Plus Worksheet - iSQL \*Plus. Oracle Tables: DDL: Naming Rules and conventions – Data Types – Constraints – Creating Oracle Table – Displaying Table Information – Altering an Existing Table – Dropping, Renaming, Truncating Table – Table Types – Spooling – Error codes.

Unit:3 WORKING WITH TABLE 15 hours
Working with Table Date Management and Patrianal DMI adding a new Paul Page Management.

Working with Table: Data Management and Retrieval: DML – adding a new Row/Record – Customized Prompts – Updating and Deleting an Existing Rows/Records – retrieving Data from Table – Arithmetic Operations – restricting Data with WHERE clause – Sorting – Revisiting

Substitution Variables – DEFINE command – CASE structure. Functions and Grouping: Built-in functions – Grouping Data. Multiple Tables: Joins and Set operations: Join – Set operations.

Unit:4	PL/SQL	15 hours

PL/SQL: A Programming Language: History – Fundamentals – Block Structure – Comments – Data Types – Other Data Types – Declaration – Assignment operation – Bind variables – Substitution Variables – Printing – Arithmetic Operators. Control Structures and Embedded SQL: Control Structures – Nested Blocks – SQ L in PL/SQL – Data Manipulation – Transaction Control statements. PL/SQL Cursors and Exceptions: Cursors – Implicit & Explicit Cursors and Attributes – Cursor FOR loops – SELECT...FOR UPDATE – WHERE CURRENT OF clause – Cursor with Parameters – Cursor Variables – Exceptions – Types of Exceptions.

#### PL/SQL COMPOSITE DATA TYPES Unit:5 13 hours PL/SQL Composite Data Types: Records – Tables – arrays. Named Blocks: Procedures – Functions – Packages – Triggers – Data Dictionary Views.

Unit:6	Contemporary Issues	2 hours
Expert lecture	es online seminars - webinars	

	Total Lecture nours	75 Hours

Course code		Programming Lab – RDBMS	LT		P	C
Core/Elective/Supportive		Core Lab : IV	0	0	3	2
Pre-requisite			Sylla			
		in visual basic and oops concept.	Version		Onwards	

The main objectives of this course are to:

- 1. To introduce database system concepts
- 2. To learn SQL for data definition, manipulation and querying a database
- 3. To learn relational database design
- 4. To learn transaction concepts and serializability of schedules

#### **Expected Course Outcomes:**

On the successful completion of the course, student will be able to:

	•	
1	Understand the concepts of database.	K2
2	Learn and apply the knowledge of database methods.	К3
3	Analyze queries in SQL to create, manipulate and query the database	K4
4	Evaluate the conceptual and normalization to design relational database.	K5
5	Create PL/SQL and develop programs using Cursors, Exceptions, Procedures and	К6
	Functions	IXU

K1 – Remember; K2 – Understand; K3 – Apply; K4 – Analyze; K5 – Evaluate; K6 – Create

#### **Programs**

- 1. Implementation of DDL commands of SQL with suitable examples Create table, Alter table, Drop Table
- 2. Implementation of DML commands of SQL with suitable examples Insert, Update, Delete
- 3. Implementation of different types of function with suitable examples Number function, Aggregate Function, Character Function, Conversion Function, Date Function
- 4. Implementation of different types of operators in SQL Arithmetic Operators, Logical Operators, Comparison Operator, Special Operator, Set Operation
- 5. Implementation of different types of Joins Inner Join, Outer Join, Natural Join etc..
- 6. Creating Database /Table Space Managing Users: Create User, Delete User Managing roles:-Grant, Revoke
- 7. Create a table for Employee details with Employee Number as primary key and following fields: Name, Designation, Gender, Age, Date of Joining and Salary. Insert at least ten rows and perform various queries using any one Comparison, Logical, Set, Sorting and Grouping operators.
- 8. Write a PL/SQL to update the rate field by 20% more than the current rate in inventory table which has the following fields: Prono, ProName and Rate. After updating the table a new field (Alter) called for Number of item and place for values for the new field without using PL/SQL block.
- 9. Write a PL/SQL program to implement the concept of Triggers
- 10. Write a PL/SQL program to implement the concept Procedures.

The main objectives of this course are to:

- 1. To enable the students to learn internet basics, web development using HTML and scripting language to respond the events.
- 2. To learn the standard notation XML, CSS, DTD and XSD.
- 3. To study the dynamic web application development using ASP and PHP.

#### **Expected Course Outcomes:**

On the successful completion of the course, student will be able to:

011	the successful completion of the course, student will be used to.	
1	Understand the basics of internet, internet services, protocols, remote access and	K2
	transaction.	
2	Understand the basics of HTML, HTML tags, Tables, Frames and Forms and	K2,K4
	apply to develop web pages.	
3	Understand the basics of scripting and apply the java script, VB script and Perl	K2-K4
	script for developing web pages.	
4	Knowledge on XML, CSS, XSL, DTD and XSD.	K4
5	Knowledge on dynamic web applications, basics of ASP, ASP objects and	K2-K4
	basics of PHP.	

K1 - Remember; K2 - Understand; K3 - Apply; K4 - Analyze; K5 - Evaluate; K6 - Create

Unit:1 9 hours

Basics of Internet communication - Hardware elements associated with internet - Internet Services - Internet Protocols - TCP/IP, UDP and HTTP - other Protocols - Telnet - Gopher - Mail and its types - FTP - Remote access and Transaction - Web Indexes Search Engines.

Unit:2 HTML 9 hours

Introduction to HTML - Tags and Documents - Link documents using Anchor Tags - Images and Pictures - Tables - HTML Forms - Frames - Framesets.

Unit:3 Scripting Language 9 hours

Introduction to Scripting - Java Script - Data types - Operators - Variables - Conditional Statements - Functions - Objects - Document object - Image Object - Event Handling - Introduction to VBScript and Perl Script.

Unit:4 XML 9 hours

Introduction to XML - Well-formed XML - CSS - XSL - Valid XML - DTD - XSD -Introduction to DOM and SAX.

Unit:5 Dynamic Web Applications 7 hours

Introduction to Dynamic web applications -Active Server Page Basics – ASP Object Model - Collections - Introduction to PHP.

Course code	Computer Networks	L	T	P	C
Core/Elective/Support	ve Allied Paper: III	4	0	0	4
Pre-requisite	Students should have the knowledge on computer connectivity and connectivity peripherals.	Syllab Versio			5-26 wards

The main objectives of this course are to:

- 1. To identify various components in a data communication system and understand state-of-the-art in network protocols, architectures and applications.
- 2. To enable students through the concepts of computer networks, different models and their involvement in each stage of network communication.
- 3. To educate the concepts of terminology and concepts of the OSI reference model and the TCP/IP reference model and protocols such as TCP, UDP and IP.
- 4. To be familiar with the concepts of protocols, network interfaces, and design/performance issues in local area networks and wide area networks.
- 5. Introduce the student to a network routing for IP networks and how a collision occurs and how to solve it and how a frame is created and character count of each frame.

#### **Expected Course Outcomes:**

On the successful completion of the course, student will be able to:

On	the successful completion of the course, student will be able to:	
1	Remember the organization of computer networks, factors influencing computer network development and the reasons for having variety of different types of networks.	K1
2	Understand Internet structure and can see how standard problems are solved and the use of cryptography and network security.	K2
3	Apply knowledge of different techniques of error detection and correction to detect and solve error bit during data transmission.	К3
4	Analyze the requirements for a given organizational structure and select the most appropriate networking architecture and technologies	K4
5	Knowledge about different computer networks, reference models and the functions of each layer in the models	K2-K4

K1 - Remember; K2 - Understand; K3 - Apply; K4 - Analyze; K5 - Evaluate; K6 - Create

#### Unit:1 BASICS OF NETWORKS AND OSI MODEL 12 hours

Network Hardware: LAN – WAN – MAN – Wireless – Home Networks. Network Software: Protocol Hierarchies – Design Issues for the Layers – Connection-oriented and connectionless services – Service Primitives – The Relationship of services to Protocols. Reference Models: OSI Reference Model – TCP/IP reference Model – Comparison of OSI and TCP/IP -Critique of OSI and protocols – Critique of the TCP/IP Reference model.

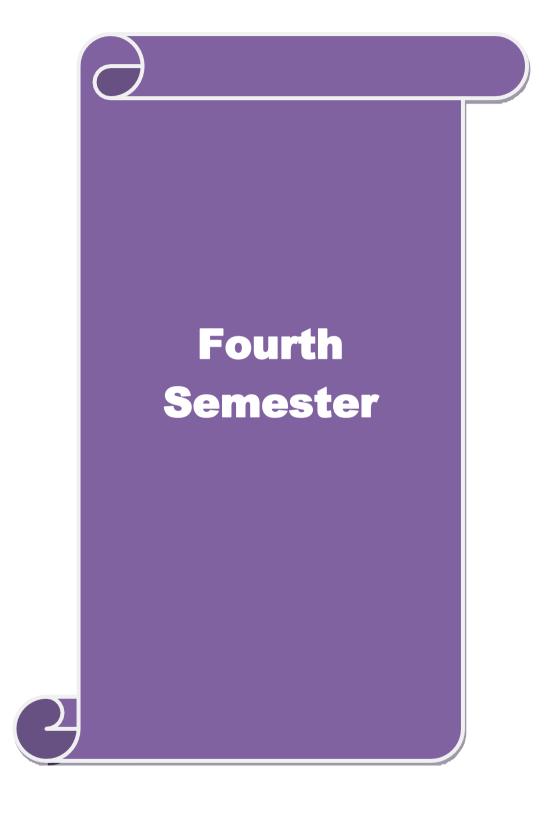

Unit:2	PHYSICAL LAYER	12 hours

PHYSICAL LAYER - Guided Transmission Media: Magnetic Media - Twisted Pair - Coaxial Cable - Fiber Optics. Wireless Transmission: Electromagnetic Spectrum - Radio Transmission - Microwave Transmission - Infrared and Millimeter Waves - Light Waves. Communication Satellites: Geostationary, Medium-Earth Orbit, Low Earth-orbit Satellites - Satellites versus Fiber.

Unit:3	DATA-LINK LAYER	12 hours
DATA-LINK	LAYER: Error Detection and correction – Elementary Data-link	Protocols – Sliding
Window Proto	cols.	
Unit:4	NETWORK LAYER	12 hours
NETWORK I	AYSER: Routing algorithms – Congestion Control Algorithms	hms.
Unit:5	TRANSPORT AND APPLICATION LAYER	10 hours
	LAYER: Elements of Transport Protocols – Internet Transport	Protocols: TCP.

Course code		<b>Operating Systems</b>	L	T	P	C
Core/Elective/Supportive		Core Paper: VI	4	0	0	4
Pre-requisite		Students Should have the basic knowledge in computer.	Syllab Versio			25-26 vards

The main objectives of this course are to:

- 1. To understand the processing of programs on a computer system to design and implementation of language processor.
- 2. To enhance the ability of program generation through expansion and gain knowledge about Code optimization using software tools.
- 3. Students will gain knowledge of basic operating system concepts.
- 4. To have an in-depth understanding of process concepts, deadlock and memory management.
- 5. To provide an exposure to scheduling algorithms, devices and information management.

T 4 1		<u> </u>
Expected	Course	<b>Outcomes:</b>

On the successful completion of the course, student will be able to:

On	the successful completion of the course, student will be use to.	
1	Know the program generation and program execution activities in detail	K1
2	Understand the concepts of Macro Expansions and Gain the knowledge of Editing processes	K2-K3
3	Remember the basic concepts of operating system	K1
4	Understand the concepts like interrupts, deadlock, memory management and file management	K2
5	Analyze the need for scheduling algorithms and implement different algorithms used for representation, scheduling, and allocation in DOS and UNIX operating system.	K1-K4

K1 - Remember; K2 - Understand; K3 - Apply; K4 - Analyze; K5 - Evaluate; K6 - Create

#### Unit:1 OPERATING SYSTEM 12 hours

Introduction - Mainframe systems - Desktop Systems - Multiprocessor Systems - Distributed Systems - Clustered Systems - Real Time Systems - Handheld Systems - Hardware Protection - System Components - Operating System Services - System Calls - System Programs

#### Unit:2 PROCESS AND THREADS 12 hours

Process Concept – Process Scheduling – Operations on Processes – Cooperating Processes – Inter-process Communication. Threads – Overview – Threading issues - CPU Scheduling – Basic Concepts – Scheduling Criteria – Scheduling Algorithms – Multiple-Processor Scheduling – Real Time Scheduling

#### Unit:3 SYNCHRONIZATION AND DEADLOCK 12 hours

The Critical-Section Problem – Synchronization Hardware – Semaphores – Classic problems of Synchronization – Deadlock Characterization – Methods for handling Deadlocks -Deadlock Prevention – Deadlock avoidance – Deadlock detection – Recovery from Deadlocks

## Unit:4 VIRTUAL MEMORY AND STORAGE 12 hours MANAGEMENT

Storage Management – Swapping – Contiguous Memory allocation – Paging – Segmentation – Segmentation with Paging. Virtual Memory – Demand Paging – Process creation – Page Replacement –Allocation of frames – Thrashing

	,	
Unit:5	FILE MANAGEMENT	10 hours
-	t - Access Methods - Directory Structure - File System Str	
	Free-space Management - Disk Structure - Disk Scheduling -	Disk Management –
Case Study:	The Linux System, Windows.	
Unit:6	CONTEMPORARY ISSUES	2 hours
Expert lectur	res, online seminars - webinars	
	Total Lecture hours	60 hours

Course code	Linux and Shell Programming	L	T	P	C
Core/Elective/Supportive	Core Paper : VII	4	0	0	4
Pre-requisite	Before starting the course students should have the basic knowledge about operating system and C programming.	Syllab Versio	ous on	2025 Onv	5-26 vards

The main objectives of this course are to:

- 1. Linux is a multi-user and multi-tasking operating system and after learning the concepts of an operating system
- 2. Student will be able to write simple shell programming using Linux utilities, pipes and filters.
- 3. The file system, process management and memory management are discussed.
- 4. Various commands used by Linux shell is also discussed which makes the users to interact with each other.
- 5. Bourne shell programming is dealt in depth which can be used to develop applications.

#### **Expected Course Outcomes:**

On the successful completion of the course, student will be able to:

1	Describe the architecture and features of Linux Operating System and distinguish it from other Operating System.	K1
2	Develop Linux utilities to perform File processing, Directory handling, User Management and display system configuration	K2-K3
3	Develop shell scripts using pipes, redirection, filters and Pipes	K2
4	Apply and change the ownership and file permissions using advance Unix commands.	К3
5	Build Regular expression to perform pattern matching using utilities and implement shell scripts for real time applications.	K3-K6

K1 - Remember; K2 - Understand; K3 - Apply; K4 - Analyze; K5 - Evaluate; K6 - Create

Unit:1 Introduction 10 hours

Introduction to LINUX Operating System: Introduction - The LINUX Operating System - Basic commands in Linux.

Unit:2 Managing Files and Directories 12 hours

Managing Files and Directories: Introduction – Directory Commands in LINUX – File Commands in LINUX. Creating files using the vi editor: Text editors – The vi editor. Managing Documents: Locating files in LINUX – Standard files – Redirection – Filters – Pipes.

Unit:3 Shell Scripts 12 hours

Securing files in LINUX: File access permissions – viewing File access permissions – Changing File access permissions. Automating Tasks using Shell Scripts: Introduction – Variables- Local and Global Shell variables – Command Substitution.

Unit:4 Conditional Execution in Shell Scripts 12 hours

Using Conditional Execution in Shell Scripts: Conditional Execution – The case...esac Construct. Managing repetitive tasks using Shell Scripts: Using Iteration in Shell Scripts – The while construct – until construct – for construct – break and continue commands – Simple Programs using Shell Scripts

Course code	Programming Lab – Linux and Shell Programming	L	Т	P	C
Core/Elective/Supportive	Core Lab : V	0	0	3	2
Pre-requisite		Sylla Versi			

The main objectives of this course are to:

- 1. Describe the architecture and features of Linux Operating System
- 2. To create programs in the Linux environment using Linux utilities and commands.
- 3. Student is given an introduction of Linux shell commands and they will be able to write own shell scripts.
- 4. Shell programming is dealt in depth which can be used to develop applications.

### **Expected Course Outcomes:**

On the successful completion of the course, student will be able to:

	r	
1	Develop Linux utilities to perform File processing, Directory handling and User Management	K1, K2
2	Understand and develop shell scripts using pipes, redirection, filters, Pipes and display system configuration	K2-K3
3	Develop simple shell scripts applicable to file access permission network administration	К3
4	Apply and change the ownership and file permissions using advance Unix commands.	K4-K5
5	Create shell scripts for real time applications.	К6

K1 - Remember; K2 - Understand; K3 - Apply; K4 - Analyze; K5 - Evaluate; K6 - Create

#### **Programs**

- 1. Write a shell script to stimulate the file commands: rm, cp, cat, mv, cmp, wc, split, diff.
- 2. Write a shell script to show the following system configuration:
  - a. currently logged user and his log name
  - b. current shell, home directory, operating system type, current path setting, current working directory
  - c. show CPU information
  - d. show memory information
- 3. Write a shell script to implement the following: pipes, Redirection and tee commands.
- 4. Write a shell script to implement the filter commands.
- 5. Write a shell script to sort number in ascending order.
- 6. Write a shell script to print Fibonacci series.
- 7. Write a shell script to find the sum of the individual digits of a given number.
- 8. Write a shell script to find the greatest among the given set of numbers.
- 9. Write a shell script for palindrome checking.
- 10. Write a shell script to print the multiplication table of the given argument using for loop.

Core/Elective/S	upportive	Core Paper : VIII	6	0	0	4
Pre-requisite		Knowledge on logic of the programs and oops	Syllab			25-26
		concept.	Versi	on	On	wards

The main objectives of this course are to:

- 1. To introduce the fundamentals of Python Programming.
- 2. To teach about the concept of Functions in Python.
- 3. To impart the knowledge of Lists, Tuples, Files and Directories.
- 4. To learn about dictionaries in python.
- 5. To explores the object-oriented programming, Graphical programming aspects of python with help of built in modules..

#### **Expected Course Outcomes:**

On the successful completion of the course, student will be able to:

	<u>.</u>	
1	Remembering the concept of operators, data types, looping statements in Python	K1
	programming.	
2	Understanding the concepts of Input / Output operations in file	K2
3	Applying the concept of functions and exception handling	К3
4	Analyzing the structures of list, tuples and maintaining dictionaries	K4
5	Demonstrate significant experience with python program development environment	K4-K6

K1 - Remember; K2 - Understand; K3 - Apply; K4 - Analyze; K5 - Evaluate; K6 - Create

Unit:1 BASICS OF PYTHON 18 hours

BASICS: Python - Variables - Executing Python from the Command Line - Editing Python Files - Python Reserved Words - Basic Syntax-Comments - Standard Data Types - Relational Operators - Logical Operators - Bit Wise Operators - Simple Input and Output.

#### Unit:2 CONTROL STATEMENTS 18 hours

CONTROL STATEMENTS: Control Flow and Syntax - Indenting - if Statement - statements and expressions- string operations- Boolean Expressions - while Loop - break and continue - for Loop. LISTS: List-list slices - list methods - list loop - mutability - aliasing - cloning lists - list parameters. TUPLES: Tuple assignment, tuple as return value -Sets - Dictionaries

Unit:3 FUNCTIONS 18 hours

FUNCTIONS: Definition - Passing parameters to a Function - Built-in functions- Variable Number of Arguments - Scope - Type conversion-Type coercion-Passing Functions to a Function - Mapping Functions in a Dictionary - Lambda - Modules - Standard Modules - sys - math - time - dir - help Function.

Unit:4 ERROR HANDLING 18 hours

ERROR HANDLING: Run Time Errors - Exception Model - Exception Hierarchy - Handling Multiple Exceptions - Data Streams - Access Modes Writing - Data to a File Reading - Data From a File - Additional File Methods - Using Pipes as Data Streams - Handling IO Exceptions - Working with Directories.

# Unit:5 **OBJECT ORIENTED FEATURES** 15 hours OBJECT ORIENTED FEATURES: Classes Principles of Object Orientation - Creating Classes -Instance Methods - File Organization - Special Methods - Class Variables - Inheritance -Polymorphism - Type Identification - Simple Character Matches - Special Characters - Character Classes - Quantifiers - Dot Character - Greedy Matches - Grouping - Matching at Beginning or End - Match Objects - Substituting - Splitting a String - Compiling Regular Expressions. Unit:6 **Contemporary Issues** 3 hours Expert lectures, online seminars - webinars **Total Lecture hours** 90 hours Text Book(s) Mark Summerfield, Programming in Python 3: A Complete introduction to the Python Language, Addison-Wesley Professional, 2009. Martin C. Brown, PYTHON: The Complete Reference, McGraw-Hill, 2001 E. Balagurusamy (2017), "Problem Solving and Python Programming", McGraw-Hill, First 3 Edition. **Reference Books** Allen B. Downey, "Think Python: How to Think Like a Computer Scientist", 2nd edition, Updated for Python 3, Shroff/O'Reilly Publishers, 2016 Guido van Rossum and Fred L. Course code	Programming Lab – Python	L	T	P	C
Core/Elective/Supportive	Core Lab : IV	0	0 0		2
Pre-requisite		Sylla Versi		-	5-26 wards

The main objectives of this course are to:

- 1. To write, test and debug simple Python programs.
- 2. To implement Python programs with conditionals and loops.
- 3. Use functions for structuring Python programs.
- 4. Represent compound data using Python lists, tuples and dictionaries.
- 5. Read and write data from/to files in Python.

#### **Expected Course Outcomes:**

On the successful completion of the course, student will be able to:

1	Write, test and debug simple Python programs. Read and write data from files in	K2
	Python	
2	Implement Python programs with conditionals and loops.	K3
3	Develop Python programs step-wise by defining functions and calling them.	K4
4	Use Python lists, tuples, dictionaries for representing compound data.	K5

K1 - Remember; K2 - Understand; K3 - Apply; K4 - Analyze; K5 - Evaluate; K6 - Create

#### **Programs**

- 1. Write a python program to compute GCD of two numbers
- 2. Write a python program to find the square root of a number (Newton's method)
- 3. Write a python program to display the multiplication table
- 4. Write a python program to find the sum of number digits in list
- 5. Write a python program to perform linear search and binary search
- 6. Write a python program to perform selection sort and insertion sort
- 7. Write a python program to perform merge sort
- 8. Write a python program to make a simple calculator
- 9. Write a python program to multiply matrices
- 10. Write a python program using command line arguments (word count)

Course code		Cyber Security	L	T	P	С
Core/Elective/S	upportive	Core Paper: IX	6	0	0	4
Pre-requisite		Basic knowledge in Internet and data crimes.	Syllab Versio			25-26 wards

The main objectives of this course are to:

- 1. Students should be able to understand.
- 2. The transformation between threat, risk, attack and vulnerability.
- 3. How threats materialize into attacks.
- 4. To find information about threats, vulnerabilities and attacks..

#### **Expected Course Outcomes:**

On the successful completion of the course, student will be able to:

1	Understand the broad set of technical, social & Cyber Security.	K2
2	Understand the security design of operating system.	К3
3	Recognize & analyze the importance of Data mining & Big data concepts.	K1-K4
4	Implement the methods and techniques to develop projects.	K4
5	To improve the Problem-solving skills, Research, Innovation/creativity	K5

K1 - Remember; K2 - Understand; K3 - Apply; K4 - Analyze; K5 - Evaluate; K6 - Create

#### Unit:1 INTRODUCTION TO CYBER SECURITY 18 hours

Introduction -Computer Security - Threats -Harm - Vulnerabilities - Controls - Authenticat Access Control and Cryptography - Web—User Side - Browser Attacks - Web Att Targeting Users - Obtaining User or Website Data - Email Attacks

# Unit:2 SECURITY IN OPERATING SYSTEM AND NETWORKS 18 hours

Security in Operating Systems - Security in the Design of Operating Systems -Rootkit - Network security attack- Threats to Network Communications - Wireless Network Security - Denial of Service - Distributed Denial-of-Service

#### Unit:3 DEFENCES: SECURITY COUNTERMEASURES 18 hours

Cryptography in Network Security - Firewalls - Intrusion Detection and Prevention Systems - Network Management - Databases - Security Requirements of Databases - Reliability and Integrity Database Disclosure - Data Mining and Big Data.

#### Unit:4 PRIVACY IN CYBERSPACE 18 hours

Privacy Concepts -Privacy Principles and Policies -Authentication and Privacy - Data Mining Privacy on the Web - Email Security - Privacy Impacts of Emerging Technologies- Where the Field Is Headed.

#### Unit:5 MANAGEMENT AND INCIDENTS 15 hours

Security Planning - Business Continuity Planning - Handling Incidents - Risk Analysis - Dealing with Disaster - Emerging Technologies - The Internet of Things - Economics - Electronic Voting - Cyber Warfare- Cyberspace and the Law - International Laws - Cyber crime - Cyber Warfare and Home Land Security

Course code	CLIENT/SERVER COMPUTING	L	Т	P	С
Core/Elective/Supportive	Elective: I	6	0	0	4
Pre-requisite	Basic knowledge in computer and computing	Syllab Versio			25-26 wards

The main objectives of this course are to:

- 1. To enable the students to learn the basics of client/server computing and applications of client/server computing.
- 2. To understand the connectivity components, software and hardware components of client/server applications.
- 3. To learn future enabling technologies for client/server computing.

#### **Expected Course Outcomes:**

On the successful completion of the course, student will be able to:

OII	the successful completion of the course, student will be usic to.	
1	Understand the basics of client/server applications, advantages and improve performance and reduce the network traffic.	K1-K2
2	Knowledge in client and server role, the networking operating system and the server operating system.	K2
3	Understanding the connectivity components of client/server applications, open system interconnect and WAN technologies.	K2-K3
4	Understanding the software and hardware components of client/server applications.	K2-K3
5	Knowledge in components of client/server applications and future enabling technologies for client/server computing.	K2-K4

K1 - Remember; K2 - Understand; K3 - Apply; K4 - Analyze; K5 - Evaluate; K6 - Create

# Unit:1 Client / Server Computing 15 hours

Client / Server Computing – Advantages of Client / Server Computing – Technology Revolution – Connectivity – Ways to improve Performance – How to reduce network Traffic.

# Unit:2 Components Of Client / Server Applications – The Client 18 hours

Components of Client / Server Applications – The Client: Role of a Client – Client Services – Request for Service. Components of Client / Server Applications – The Server: The Role of a Server – Server Functionality in Detail – The Network Operating System – What are the Available Platforms – The Server Operating system.

Unit:3	Components of Client / Server Applications – Connectivity	18 hours

Components of Client / Server Applications – Connectivity: Open System Interconnect – Communications Interface Technology – Inter-process communication – WAN Technologies.

Unit:4	Components Of Client / Server Applications	18 hours
Components	of Client / Server Applications - Software. Components	of Client / Server
Applications	Hardware	

Uni	it:5	Components of Client / Server Applications	18 hours

Course code	Distributed Computing	L	T	P	C
Core/Elective/Supportive	Elective: I	6	0	0	4
Pre-requisite	Basic knowledge in databases, client and server	Syllab Versio			5-26 vards

The main objectives of this course are to:

- 1. To enable the students to learn the concepts and techniques in distributed computing and client server computing.
- 2. To learn the pros and cons of distributed computing, distributed databases.
- 3. To familiar with design considerations in distributed computing
- 4. To understand the client server models and R\* projection techniques

## **Expected Course Outcomes:**

On the successful completion of the course, student will be able to:

1	Understand the concepts and techniques in distributed computing and client server	K1
	computing.	
2	Understand the pros and cons of distributed processing, databases, challenges.	<b>K2</b>
3	Understand the design considerations in distributed computing	K2
4	Understand and analyse the client server network model, file server, printer server and email server.	К3
5	Understand and obtaining the Knowledge on distributed databases, R* project	K2-K4
	techniques.	

K1 - Remember; K2 - Understand; K3 - Apply; K4 - Analyze; K5 - Evaluate; K6 - Create

# Unit:1 Introduction to Distributed Systems 15 hours

Distributed Systems: Fully Distributed Processing systems – Networks and interconnection structures – designing a distributed processing g system.

# Unit:2 Challenges and Managing Distributed Resources 18 hours

Distributed systems: Pros and Cons of distributed processing – Distributed databases – the challenges of distributed data – loading, factors – managing the distributed resources division of responsibilities.

#### Unit:3 Design Considerations 18 hours

Design considerations: Communication Line loading – line loading calculations- partitioning and allocation - data flow systems – dimensional analysis- network database design considerations-ration analysis- database decision trees- synchronization of network databases

Unit:4	Client Server Network Model	18 hours
--------	-----------------------------	----------

Client server network model: Concept – file server – printer server and e-mail server.

#### Unit:5 Distributed Databases 18 hours

Distributed databases: An overview, distributed databases- principles of distributed databases – levels of transparency- distributed database design- the R\* project techniques problem of heterogeneous distributed databases.

Course code		Mobile Computing	L	T	P	C
Core/Elective/S	upportive	Elective: I	6 0		0	4
Pre-requisite		Basic knowledge on mobile technologies	Syllabu Version		2025 Onw	5-26 ards
Course Object	tives:					

The main objectives of this course are to:

- 1. To enable the students to study on the emerging technologies in mobile computing.
- 2. To learn the basics of mobile computing and IVR application
- 3. To make the students to learn about the architecture of mobile computing
- To understand the mobile technologies GPRS,CDMA and 3G

#### **Expected Course Outcomes:**

On the successful completion of the course, student will be able to:

1	Understand the history of mobile computing, applications, standards and mobile	K1-K2
	computing architecture.	
2	Understand the mobile computing techniques related to telephone, access	K2
	procedures, IVR applications and Voice XML.	
3	Understand and analyse the emerging technologies Bluetooth, RFID, WiMAX, etc.	K1-K3
	also GSM.	
4	Knowledge on GPRS, GPRS network architecture, Data services, applications for	K4
	GPRS and limitations.	
5	Knowledge on CDMA and 3G, CDMA Vs GSM, applications of 3G wireless LAN,	K1-K4
	Architecture, Adhoc and sensor networks and security features.	

K1 - Remember; K2 - Understand; K3 - Apply; K4 - Analyze; K5 - Evaluate; K6 - Create

Unit:1 Introduction 18 hours

Introduction: Mobility of Bits and Bytes –Wireless The Beginning – Mobile Computing – Dialogue Control – Networks – Middleware and Gateways – Application and services- Developing Mobile Computer Applications – security in mobile computing – Standards \_ Why is it necessary – Standard bodies. Mobile Computing Architecture: History of computers and Internet -Architecture for mobile computing – Three-tier architecture – Design considerations for mobile computing – Mobile computing through Internet – Making exiting applications mobile enabled

Unit:2 **Mobile Computing Through Telephony** 18 hours Mobile Computing Through Telephony: Evaluation of telephony – Multiple access procedures – Mobile computing through telephone – IVR Application .

**Emerging Technologies** 18 hours

**Emerging Technologies**: Blue Tooth – RFID – WiMAX – Mobile IP – IPv6 – Java Card. GSM: Global System for mobile communications - GSM Architecture - GSM Entities - Call routing in GSM – PLMN Interfaces – GSM Addresses and Identifiers – Network Aspects in GSM – GSM Frequency allocations – Authentications and Security.

Unit:4 **GPRS** 18 hours

GPRS: GPRS and packet data network – GPRS network architecture – GPRS network operations– Data services in GPRS - Application for GPRS- Limitations - Billing and Charging. WAP: MMS – GPRS Applications

Unit:5	CDMA and 3G	18 hours									
CDMA and	<b>3G:</b> Spread spectrum technology – Is 95 – CDMA vs GSM – W	ireless Data – Third									
generation n	generation networks – Applications on 3G. Wireless LAN: Wireless LAN advantages – IEEE										
802.11 standards – Architecture – Mobile in Wireless LAN – Deploying wireless LAN – Mobile											
adhoc networks and sensor networks – Wireless LAN Security – WiFi vs 3G.

Course Code	Core Lab - VII : Capstone Project Work	L	T	P	C				
Core/Elective/Supportive		0	0	3	2				
Pre - requisite	<ul> <li>Students should have a good understanding of software engineering</li> <li>Student should possess strong analytical skills</li> <li>Strong coding skills in any one programming</li> </ul>	Sylla vers	abus ion	_	25-26 wards				
Course Objectives									

- To understand and select the task based on their core skills.
- To get the knowledge about analytical skill for solving the selected task.
- To get confidence for implementing the task and solving the real time problems.

#### **Expected Course Outcomes**

On the successful completion of the course, student will be able to:

1	Illustrate a real world problem and identify the list of project requirements	К3
2	Judge the features of the project including forms, databases and reports	K5
2	Design code to meet the input requirements and to achieve the required output	K6
3	Compose a project report incorporating the features of the project	<b>K6</b>

K1 – Remember K2 – Understand K3 – Apply K4 - Analyze K5 – Evaluate K6 - Create

#### Aim of the project work

- 1. The aim of the project work is to acquire practical knowledge on the implementation of the programming concepts studied.
- 2. Each student should carry out individually one project work and it may be a work using the software packages that they have learned or the implementation of concepts from the papers studied or implementation of any innovative idea focusing on application oriented concepts.
- 3. The project work should be compulsorily done in the college only under the supervision of the department staff concerned.

#### Selection of Tools

No restrictions shall be placed on the students in the choice of platform/tools/languages to be utilized for their project work, though open source is strongly recommended, wherever possible. No value shall be placed on the use of tools in the evaluation of the project.

#### Viva Voce

- 1. Viva-Voce will be conducted at the end of the semester by both Internal (Respective Guides) and External Examiners, after duly verifying the project report in the college, for a total of 50 marks.
- 2. Internal Mark Split up (20 marks): Title Selection 5 marks, Problem Identification 5 marks Review I and Review II -10 marks
- 3. External Mark Split up (30 marks): Project report 15 marks, Viva PPT Presentation 5 marks and 10 Marks for Viva Voce.

Course code	Multimedia and its Applications	L	T	P	C
Core/Elective/Supportive	Core Paper: X	5	0	0	4
Pre-requisite	Basic knowledge in 2D, 3D and multimedia file formats	Syllab Versio			25-26 vards

The main objectives of this course are to:

- 1. Design and apply two dimensional graphics and transformations.
- 2. Design and apply three dimensional graphics and transformations.
- 3. Apply Illumination, color models and clipping techniques to graphics.
- 4. Understood Different types of Multimedia File Format.

## **Expected Course Outcomes:**

On the successful completion of the course, student will be able to:

1	Explain applications, principles ,commonly used and techniques of computer graphics and algorithms for Line-Drawing, Circle- Generating and Ellipse-Generating.	K2
2	Students will get the concepts of 2D and 3D, Viewing, Curves and surfaces, Hidden Line/surface elimination techniques	К3
3	Studies concepts of Multimedia Systems, Text, Audio and Video tools	К3
4	Compressing audio and video using MPEG-1 and MPEG-2	K4
5	Creates Animation with special effects using algorithms	K6

K1 - Remember; K2 - Understand; K3 - Apply; K4 - Analyze; K5 - Evaluate; K6 - Create

Unit:1 INTRODUCTION 15 hours

What is Multimedia? – Introduction to making Multimedia – Macintosh and Windows Production platforms – Basic Software tools. Making Instant Multimedia – Multimedia authoring tools.

Unit:2 TEXT 15 hours

Text: Types of Text – Unicode Standard – Font – Insertion of Text – Text compression – File formats. Image: Image Types – Seeing Color – Color Models – Basic Steps for Image Processing – Scanner – Digital Camera – Interface Standards – Specification of Digital Images – CMS – Device Independent Color Models – Image Processing software – File Formats – Image Output on Monitor and Printer.

Unit:3 AUDIO 15 hours

Audio: Introduction – Acoustics – Nature of Sound Waves – Fundamental Characteristics of Sound – Microphone – Amplifier – Loudspeaker – Audio Mixer – Digital Audio – Synthesizers – MIDI – Basics of Staff Notation – Sound Card – Audio Transmission – Audio File formats and CODECs – Audio Recording Systems – Audio and Multimedia – Voice Recognition and Response - Audio Processing Software.

Unit:4 VIDEO 15 hours

Video: Analog Video Camera – Transmission of Video Signals – Video Signal Formats – Television Broadcasting Standards – PC Video – Video File Formats and CODECs – Video Editing – Video Editing Software.

Unit:5	ANIMATION	13 hours						
Animation: T	ypes of Animation - Computer Assisted Animation - Cre	eating Movement –						
	Animation – Some Techniques of Animation – Animation or							
	lering Algorithms. Compression: MPEG-1 Audio – MPEG-1 Vi	deo - MPEG-2Audio						
- MPEG-2 Vio	leo.

the project.

The main objectives of this course are to:

- 1. To understand and select the task based on their core skills.
- 2. To get the knowledge about analytical skill for solving the selected task.
- 3. To get confidence for implementing the task and solving the real time problems.
- 4. Express technical and behavioral ideas and thought in oral settings.
- 5. Prepare and conduct oral presentations

Exp	Expected Course Outcomes:						
Or	the successful completion of the course, student will be able to:						
1	Formulate a real world problem and develop its requirements develop a design solution for a set of requirements.	К3					
2	Test and validate the conformance of the developed prototype against the original requirements of the problem.	K5					
3	Work as a responsible member and possibly a leader of a team in developing software solutions.	К3					
4	Express technical ideas, strategies and methodologies in written form. Self-learn new tools, algorithms and techniques that contribute to the software solution of	K1-K4					

K1 - Remember; K2 - Understand; K3 - Apply; K4 - Analyze; K5 - Evaluate; K6 - Create

Generate alternative solutions, compare them and select the optimum one.

#### AIM OF THE PROJECT WORK

1. The aim of the project work is to acquire practical knowledge on the implementation of the programming concepts studied.

**K6** 

- 2. Each student should carry out individually one project work and it may be a work using the software packages that they have learned or the implementation of concepts from the papers studied or implementation of any innovative idea focusing on application oriented concepts.
- 3. The project work should be compulsorily done in the college only under the supervision of the department staff concerned.
- 4. The project work with 2 new modules to be designed, implemented and it should be completed.

#### Viva Voce

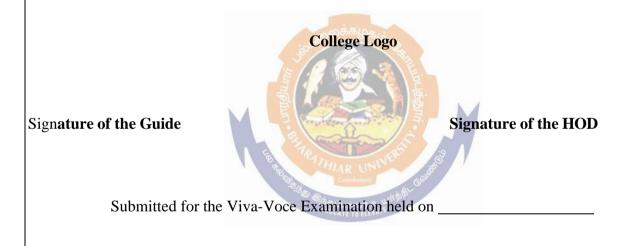

- 1. Viva-Voce will be conducted at the end of the year by both Internal (Respective Guides) and External Examiners, after duly verifying the **Annexure Report** available in the College, for a total of 100 marks at the last day of the practical session.
- 2. Out of 100 marks, 60 marks for project report, 20 marks for presentation and 20 marks for Viva Voce.

Abstract

#### **Chapter I Introduction**

- 1.1 An Overview
- 1.2 Objectives of the project
- 1.3 Organization project
- 1.4 Scope of the system

#### **Chapter II System Analysis**

- 2.1 Hardware Specification
  - 2.1.1 About System Configuration
- 2.2 Software Specification
  - 2.2.1 About Programming Language
- 2.3 Existing System (Minimum 1 page per module)
  - 3.1.1 Module 1
  - 3.1.2 Module 2
  - 3.1.3 Module 3
- 2.4 Proposed System (Minimum 1 page per module)
  - 3.1.1 Module 1
  - 3.1.2 Module 2
  - 3.1.3 Module 3

#### **Chapter III System Development**

- 3.1 Description of Modules
  - 3.1.1 Module 1
  - 3.1.2 Module 2
  - 3.1.3 Module 3
- 3.2 Data Flow Diagram
  - 3.2.1 DFD Module 1
  - 3.2.2 DFD Module 2
  - 3.2.3 DFD Module 3
  - 3.2.4 DFD integration with all module if applicable
- 3.3 Input Design

- 3.3.1 Sample Input
- 3.4 Output Design
  - 3.4.1 Sample Output
  - 3.4.2 Screens and Reports
- 3.5 Data Base Design
  - 3.5.1 Table Design
- 3.6 Source Code
  - 3.6.1 Sample Code

# **Chapter IV System Testing and Implementation**

- 4.1 System Testing
- 4.2 System Implementation

## **Chapter V Conclusion**

- 5.1 Conclusion
- 5.2 Scope for the Future

Course code		Programming Lab – Multimedia	L	T	P	C
Core/Elective/	Supportive	Core Lab : VIII	0	0	5	2
Pre-requisite		Students should have the basic knowledge on multimedia applications.	Syllal Versi		2025 Onw	-26 ards

The main objectives of this course are to:

- 1. To learn the basic principles of graphics.
- 2. Provide an understanding of how to scan convert the basic to picture definition.
- 3. To be able to discuss the application of computer graphics concepts in the development of computer games, information visualization and business applications.
- 4. To comprehend and analyse the fundamentals of animation, virtual reality, underlying technologies, principles and applications.

Exp	ected Course Outcomes:	
On	the successful completion of the course, student will be able to:	
1	Understand the basic concepts of graphics.	K1
2	Design scan conversion problems using photoshop.	K2
3	Apply clipping and filling techniques for modifying an object.	К3
4	Understand the concepts of different type of objects in 2D.	K4
5	Understand and develop the practical implementation various options in photoshop.	K6

K1 - Remember; K2 - Understand; K3 - Apply; K4 - Analyze; K5 - Evaluate; K6 - Create

#### **Programs**

- 1. Create Sun Flower using Photoshop.
- 2. Animate Plane flying in the Clouds using Photoshop.
- 3. Create Plastic Surgery for the Nose using Photoshop.
- 4. Create See-through text using Photoshop.
- 5. Create a Web Page using Photoshop.
- 6. Convert Black and White Photo to Color Photo using Photoshop.
- 7. Draw a landscape using multiple Layers.
- 8. Paint a scenery of a park using different tools of Photoshop
- 9. Pick any picture of a magazine cover page make changes using selection tool.
- 10.Design a poster for an event and show the difference in resolution and quality for Print and Web.

Course code	BUSINESS INTELLIGENCE	${f L}$	T	P	C
Core/Elective/Supportive	Elective - II	6	0	0	3
Pre-requisite	Basic knowledge in data, data base and information	Syllab Versio			25-26 wards

#### **Course Objectives:**

The main objectives of this course are to:

- 3. To enable the students to learn business intelligence concepts, data warehouses, data mining techniques for CRM.
- 4. To learn about text mining and web mining and its applications.

#### **Expected Course Outcomes:**

On the successful completion of the course, student will be able to:

1	Understand the basics of business intelligence, business decisions, data warehouses	K2
	and its architecture, KDD process.	
2	Understand the applications of data mining in business, data mining techniques for CRM, text mining and web mining.	K2,K3
	, ,	
3	Knowledge in business intelligence, application in various domains and best	К3
	practices.	
4	Understand the knowledge management, its architecture, approaches and tools.	К3
5	Knowledge in Web analytics and business intelligence, eCRM and case studies in	K4
	web analytics.	

K1 - Remember; K2 - Understand; K3 - Apply; K4 - Analyze; K5 - Evaluate; K6 - Create

# Unit:1 INTRODUCTION TO BUSINESS INTELLIGENCE

18 hours

Introduction to business intelligence and business decisions — Data warehouses and its role in Business Intelligence — Creating a corporate data warehouse — Data Warehousing architecture — OLAP vs. OLTP - ETL process — Tools for Data Warehousing — Data Mining — KDD Process

Unit:2 APPLICATIONS 18 hours

Applications of Data Mining in Business – Data Mining Techniques for CRM – Text Mining in BI - Web Mining – Mining e-commerce data – Enterprise Information Management - Executive Information Systems

#### Unit:3 BUSINESS INTELLIGENCE 18 hours

Business Intelligence – Function, Process, Services & Tools - Application in different domains – Operational BI - Customizing BI – Managing BI projects vs. Traditional IS projects – Managing BI projects – Best Practices in BI Strategy

#### Unit:4 KNOWLEDGE MANAGEMENT 18 hours

Knowledge Management – Definition – Data Vs. Information Vs. Knowledge – The ten key principle of KM – Knowledge Management Architecture – Knowledge Management Vs. Knowledge Processing – KM approaches – KM Tools – KM Infrastructure – KM models - KM Strategies

Unit:5 ANALYTICS 18 hours

Web Analytics and Business Intelligence – eCRM - Case Study: Web Trends – Boeing – EverBank – China Eastern

					•

#### **Course Objectives**

- 1. To learn the various E-learning approaches and Components.
- 2. To understand the key elements of Design Thinking.
- 3. To explore the models for E-learning courseware development.
- 4. To design E-learning courses using Authoring tools.
- 5. To analyze various E-learning solutions for design and development

#### **Expected Course Outcomes**

1	Distinguish the phases of activities in models of E-learning	<b>K2</b>
2	Analyze appropriate E-Learning instructional methods and delivery strategies	K4
3	Apply appropriate E-learning Authoring tools	К3
4	Create interactive and evaluate E-Learning courseware	K5-K6

## K1 – Remember K2 – Understand K3 – apply K4- Analyze K5 – evaluate K6- Create

#### UNIT I Introduction 18 hours

Introduction to E- Learning - Need for E-Learning - Types of E-Learning - Components of E-Learning - Synchronous and Asynchronous Modes of Learning - Quality of E-Learning - Blended Learning: Activities, Team and Technology - Work Flow to Produce and Deliver E-Learning Content. Design Thinking: Introduction - Actionable Strategy - Act to Learn - Leading Teams to Win

# UNIT II Designing E-Learning Content / Course 18 hour

Design Models of E-Learning – Identifying and Organizing E-Learning Course Content: Needs Analysis –Analyzing the Target Audience – Identifying Course Content - Defining Learning Objectives – Defining the Course Sequence – Defining Instructional Methods – Defining Evaluation and Delivery Strategies – Case Study.

# UNIT III Creating Interactive E- Content 18 hours

Preparing content: Tips for Content Development and Language Style – Creating storyboards: Structure of an interactive Multimedia E-lesson – Techniques for presenting Multimedia content – Integrating multimedia elements -Developing Practice and Assessment Tests – Courseware Development – Authoring tools – Types of Authoring Tools – Selecting an Authoring Tool.

### UNIT IV Learning Platforms 18 hours

Types of Learning Platforms – Proprietary vs. Open – Introduction Learning Management System (LMS) – Content management System – CMS vs LMS – LMS solutions – Functional Areas of LMS.

## UNIT V Course Delivery and Evaluation 18 hours

Components of an Instructor Led or Facilitated Course – Planning and Documenting Activities – Facilitating Learners Activities – E-learning Methods and Delivery Formats – Using Communication Tools for E-learning – Course Evaluation.

Total Lecture Hours 90 hours

#### **Course Objectives**

- 1. Understand the Programming Language.
- 2. To prepare data for data analysis through understanding its distribution.
- 3. Exposure on data processing using excel
- 4. To acquire knowledge in plotting using visualization tools.
- 5. To understand and implement classification and regression model.

#### Course Outcomes

1	Understand the basic concepts and techniques of Machine Learning.	K2
2	Explain the regression methods, classification methods, clustering methods.	K1
3	Apply the inference and learning algorithms for the hidden Markov model.	К3
4	Demonstrate Dimensionality reduction Techniques	K4
5	Appreciate the underlying mathematical relationships within and across Machine	K5
	Learning algorithms and the paradigms of supervised and un-supervised learning.	

# K1 – Remember K2 – Understand K3 – Apply K4- Analyze K5 – Evaluate K6- Create

## **List of Programs**

- 1. Study of Basic function in Excel
- 2. Working with Range Names and Tables
- 3. Cleaning Data with Text Functions
- 4. Cleaning Data containing Data Values
- 5. Working with VLOOKUP functions and Pivot Table.
- 6. Demonstration of Data Visualization in Excel.
- 7. Importing Data from External Source Using Excel
- 8. Creating a data model
- 9. Create a dashboard for a given requirement
- 10. Implement a data analytics for the real time data set
