B.Sc. Data Science

Syllabus

AFFILIATED COLLEGES

Programme Code:28M

2025 - 2026 onwards

BHARATHIAR UNIVERSITY

(A State University, Accredited with "A++" Grade by NAAC, Ranked 21st among Indian Universities by MHRD-NIRF)

Coimbatore - 641 046, Tamil Nadu, India

	B.Sc. Data Science Curriculum & Syllabus							
Prograi	Programme Educational Objectives (PEOs)							
	The B.Sc. Data Science program describe accomplishments that graduates are expected to attain within five to seven years after graduation.							
PEO1	Our graduates will excel with professional skills, fundamental knowledge, and advanced futuristic technologies to become Data Scientists, Data Analyst, AI Research Scientists, or Entrepreneurs							
PEO2	Our graduates will establish their knowledge by adopting Data Science Technologies to solve complex real-world problems with accurate, thoughtful solutions							
PEO3	Our graduates will engage in lifelong learning to excel in their profession with social and ethical awareness and responsibility							

Progra	Programme Specific Outcomes (PSOs)							
After t	After the successful completion of B.Sc. Data Science programme the students are expected to							
PSO1	Ability to design, develop, implement and apply Analytical skills related to Research and Real-world problems							
PSO2	Ability to apply tools and techniques to provide successful solutions in the multidisciplinary field							
PSO3	Ability to critique the role of information and analytics for a innovative career, research activities and consultancy							

Progra	mme Outcomes (POs)
On suc	ecessful completion of the B.Sc. Data Science
PO1	Apply analytical and critical thinking to identify, formulate, analyze, and solve Complex real-world problems in order to reach nuanced authenticated conclusions
PO2	Possess the ability to demonstrate advanced independent critical enquiry, analysis and reflection of modern statistical methodology and computing
PO3	Have a set of flexible and transferable skills for different types of employment, both within the Information Technology sector and beyond, in both global and local organizations
PO4	Develop and implement data analysis strategies base on theoretical principles, ethical considerations, and deep, detailed and broad knowledge of the underlying data and its implications in the context from which the data was taken
PO5	Be critical and creative thinkers, with an aptitude and appreciation for continued self-directed learning in the evolving world of data science, artificial intelligence and social media
PO6	Design and develop research-based solutions for complex problems with specified needs with appropriate ethical consideration for public health, safety, culture, society, and the environment.
PO7	Establish the ability to listen, read, proficiently communicate and articulate nuanced data and information through traditional and digital channels to audiences with diverse perspectives
PO8	Articulate and evaluate appropriate legal and ethical standards pertaining to all forms of communications, network security and human rights.
PO9	Showcase an understanding of the interdisciplinary nature of data, information and community and its influence innovation and progress within the current local or global context
PO10	Be able to initiate and implement constructive change in their communities with their skills in data and information, including various professions and workplaces

BHARATHIAR UNIVERSITY, COIMBATORE-641 046

(For the students admitted from the academic year 2025-2026 onwards)

B.Sc. Data Science (CBCS pattern)

Course Code	Descriptive Statistics	L	Т	P	C
Core/Elective/ Supportive	Allied 1	4	-	-	4
Pre-requisite	Basic level on Mathematical Computation		Syllabus Version		5 – 26 vards

Course Objectives:

The main objectives of this course are to:

Understand the significance and computational aspects of statistical analysis Understand the patterns of distribution of data Understand the concepts of predictive analytics

Expected Course Outcomes:

On the successful completion of the course, student will be able:

1	Understand the scope and necessity of Statistics and the representation of data	K1, K2
2	Tabulate and represent the data in diagrams and graphs	K2, K3
3	Apply the formula and calculate descriptive measures of statistics	K2, K3,K4
4	Analyze the nature of data and interpret the measures	K2, K3,K4
5	Analyze the data and predict the future values using regression	K4,K5

K1 - Remember; K2 - Understand; K3 - Apply; K4 - Analyze; K5 - Evaluate; K6- Create

UNIT:1 Status of Statistics and collection of data 9 hours

Origin, scope, definition, limitations of Statistics. Data-Types- Primary and Secondary Data-Methods of data Collection

UNIT:2 Classification, Tabulation and graphical representation

9 hours

Classification of data, preparation of tables, Diagrammatic representation of data: One dimensional and Two dimensional diagrams – Graphical representation: Line diagram, Frequency polygon, Frequency curve, Histogram

UNIT:3 Measures of Central Tendency and location

10 hours

Measures of Central Tendency: Mean, Median, Mode, Geometric Mean and Harmonic Mean-Properties with Merits and Demerits- Empirical Relation between means. Partition values: Quartiles, Deciles and Percentiles.

UNIT:4 Measures of Dispersion

10 hours

Absolute and Relative Measures Range, Mean deviation, Quartile deviation and Standard deviation – Measures of Skewness - Pearson's and Bowley's Coefficient of Skewness, Coefficient of Skewness based on moments – Kurtosis and its significance

UNIT:	Measures of Variation, correlation and regression	10 hours
	es of Variation : Standard, Mean and Quartile deviations-Co efficient of variation - Karl Pearson's Co-efficient of correlation – Rank correlation - Regress	
	Total Lecture hours	48 hours

Pre-requ	uisite	Basic Mathematics	Syllabu Version	IS	2025 - onwar	

Course Objectives:

The main objectives of this course are to:

- 1. To understand linear programming methods.
- 2. To understand Dynamic programming approach.
- 3. To understand concepts basics concepts of Linear Algebra
- 4. To understand concepts of vector spaces and matrices
- 5. To understand the applications of Linear Algebra in Machine Learning

Expected Course Outcomes:

On the successful completion of the course, student will be able to:

Oli	the successful completion of the course, student will be able to.	
1	Solve linear programming techniques to optimization problems arising in all	K3
	Computer fields	
2	Use Dynamic programming approach to real time problems.	К3
3	Understand the basics of Linear Programming constructs	K2
4	Apply vector spaces and their applications in Machine Learning	К3
5	Understand the concepts of matrix, Gaussian Elimination and differential equations	K2,
	and Apply the concepts of Linear Algebra in Machine Learning Algorithms	K5

K1 - Remember; K2 - Understand; K3 - Apply; K4 - Analyze; K5 - Evaluate; K6 - Create

Unit:1 Linear Programming Problem

10 hours

Introduction to Operations Research: Basics definition - scope - objectives - phases - models - limitations of Operations Research - Linear Programming Problem - Formulation of LPP - Graphical solution of LPP - Simplex Method - Artificial variables - Big-M method - Two-phase method - Degeneracy - Unbound solutions - Duality in Linear Programming Problems - Dual Simplex - Introduction to optimization - gradient descent method - convex optimization.

Unit:2 Dynamic Programming

12 hours

Introduction - Characteristics of dynamic programming – Dynamic programming approach for Priority Management employment smoothening – capital budgeting – Stage Coach/Shortest Path – cargo loading and Reliability problems.

Unit:3 Geometry Linear Equations and Vector Spaces 12 hours

The Geometry of Linear Equations - An Example of Gaussian Elimination- Matrix Notation and Matrix Multiplication - Triangular Factors and Row Exchanges- Inverses and Transposes.

Vector Spaces and Subspaces – Solving Ax=0 and Ax=b - Linear Independence, Basis and Dimension- The Four Fundamental Subspaces- Graphs and Networks- Linear Transformations.

Unit:4 Determinants, Eigenvalues and Eigenvectors

12 hours

Determinants: Introduction- Properties of the Determinant- Formulas for the Determinant – Applications of Determinants. Eigenvalues and Eigenvectors: Introduction- Diagonalization of a Matrix .- Difference Equations and Powers A k- Differential Equations and e At - Complex Matrices- Similarity Transformations – A - Applications of Machine Learning – Use cases.

Unit:5 Positive Definite Matrices

12 hours

Minima, Maxima, and Saddle Points - Tests for Positive Definiteness - Singular Value Decomposition - Machine Learning Applications - Use cases.

Unit:6 | Contemporary Issues

2 hours

Use Linear and Dynamic programming approach to real time problems. Apply the concepts of Linear Algebra in Machine Learning Algorithms

Expert lectures, online seminars – webinars

Total Lecture hours 60 hours

Unit: 4	UNCERTAINITY AND DECISION MAKING			10 Ho	urs	

B.Sc. Data Science 2025-26 onwards - Affiliated Colleges - Annexure No.32B SCAA DATED: 09.07.2025

Making Simple Decisions-Combining beliefs and desires under Uncertainty-Utility Theory-Utility Functions-Multi-attribute utility functions- Quantifying uncertainty: Acting under uncertainty - Probability basics — Bayes' Rule and its use. Probabilistic reasoning: Representing knowledge in uncertain domain- The semantics of Bayesian networks - Decision networks- The value of information-Decision theoretic expert systems.

Course Code	Mini project I using Python Programming / Advanced Excel	L	Т	P	С
Core/Elective/ Supportive	Skill based Subject-1	-	-	3	2
Pre-requisite	Students should have a good understanding of Python Programmi Advanced Excel	ing	Syllabus Version		2025 – 26 onwards

Course Objectives:

The main objectives of this course are to:

- 1. To understand and select the task based on their core skills
- 2. To get the knowledge about analytical skill for solving the selected task
- 3. To get confidence for implementing the task and solving the real time problems.

Expected Course Outcomes:

On the successful completion of the course, student will be able:

1	Illustrate a real world problem and identify the list of project requirements	К3
2	Judge the features of the project including forms, databases and reports	K5
3	Design code to meet the input requirements and to achieve the required output	K6
4	Compose a project report incorporating the features of the project	K6

K1 - Remember; K2 - Understand; K3 - Apply; K4 - Analyze; K5 - Evaluate; K6- Create

Aim of the project work

- 1. The aim of the project work is to acquire practical knowledge on the implementation of the programming concepts studied
- 2. Each student should carry out individually one project work and it may be a work using the software packages that they have learned or the implementation of concepts from the papers studied or implementation of any innovative idea focusing on application-oriented concepts
- 3. The project work should be compulsorily done in the college only under the supervision of the department staff concerned.

Viva Voce

- 1. Viva-Voce will be conducted at the end of the year by both Internal (Respective Guides) and External Examiners, after duly verifying the Annexure Report available in the College, for a total of 75 marks at the last day of the practical session.
- 2. Out of 75 marks, 45 marks for project report and Viva Voce and 30 Marks for Internal Assessment.

Synopsis

- 1. Introduction
 - 1.1 Organization Profile
 - 1.2 System Specification
 - 1.2.1 Hardware Configuration
 - 1.2.2 Software Specification
- 2. System Study
 - 2.1 Existing System
 - 2.1.1 Drawbacks
 - 2.2 Proposed System
 - 2.2.1 Features

3. System Design and Development

- 3.1 File Design
- 3.2 Input Design
- 3.3 Output Design
- 3.4 Database Design
- 3.5 System Development
 - 3.5.1 Description of Modules (Detailed explanation about the project work)

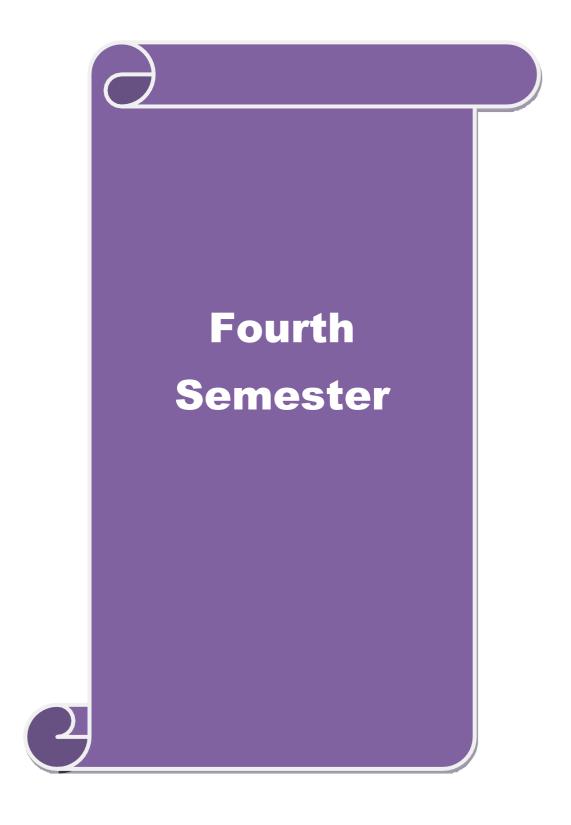

4 Software Testing and Implementation Conclusion

Bibliography Appendices

- A. Data Flow Diagram
- B. Table Structure
- C. Sample Coding
- D. Sample Input
- E. Sample Output

Course Code	DIGITAL MARKETING	L	Т	P	C
Core/Elective/ Supportive	Allied Paper 4	4	-	-	4
Pre-requisite					25 – 26 wards

Course Objectives:

The main objectives of this course are to:

- 1. Understand the major digital marketing channels online advertising: Digital display, video, mobile, search engine, and social media
- 2. Learn and develop, evaluate, and execute a comprehensive digital marketing strategy and plan
- 3. Learn how to measure digital marketing efforts and calculate ROI
- 4. Explore the latest digital ad technologies

Expected Course Outcomes:

On the successful completion of the course, student will be able:

1	Define and explain various terminologies associated with Digital Marketing.	K1, K2
2	Apply the knowledge of Digital marketing concepts.	K2, K3
3	Construct an appropriate marketing model.	K2, K3
4	Analyze role and importance of digital marketing in a rapidly changing business landscape.	K3
5	Implement the key elements of a digital marketing strategy.	K2

K1 - Remember; **K2** - Understand; **K3** - Apply; **K4** - Analyze; **K5** - Evaluate; **K6**- Create

Unit:1 INTRODUCTION TO DIGITAL MARKETING

9 hours

Digital marketing, Marketing v/s Sales, comparison between digital and traditional marketing, Benefits of Digital marketing, Digital marketing platforms and Strategies, Defining Marketing Goals, Latest Digital marketing trends, Case studies of Digital Campaigns

Unit:2 | SEARCH ENGINE OPTIMIZATION(SEO)

9 hours

Components of Search Engines, SEO Keyword Planning, Meta Tags and Meta Description, Website Content Optimization, Back Link Strategies, Internal and External Links, Optimizing Site Structure Keywords in Blog and Articles, On Page SEO, Off Page SEO, Local SEO, Mobile SEO, Ecommerce SEO, optimizing with Google Algorithms, Using Web Master Tool, Measuring SEO Effectivenes

Unit:3 SOCIAL MEDIA MARKETING (SMM)

10 hours

Introduction to social Media Marketing, Benefits of using SMM, Social Media Statistics, Social Media Strategy, Facebook Marketing, Word Press blog creation, Twitter marketing, LinkedIn Marketing, Google plus marketing, Social Media Analytical Tools

Unit:4 | SEARCH ENGINE MARKETING (SEM)

10 hours

Hough transforms and other simple object recognition methods, shape correspondence and shape matching, Principal component analysis, Shape priors for recognition. Image Understanding-Pattern recognition methods-HMM, GMM and EM

Unit:5 | APPLICATION

hours

Google Analytics, Online Reputation Management, E-Mail Marketing, Affiliate Marketing, Social Media Analytics, Ad designing

	Total Lecture hours	48 hours
	Text Book(s)	
1	Ryan Deiss and Russ Hennesberry, "Digital Marketing forDummies",2017	
2	Puneet singh bhatia, "Fundamentals of DigitalMarketing",2017

Course code	Optimization Techniques	${f L}$	T	P	C			
Core/Elective/	Skill based Subject-2	3	-	-	2			
Supportive								
Pre-requisite	Familiarity with matrices and linear equations	Version 202			25 – 26 wards			
Course Objectives:								
The main objective of the	is course is to make the students to gain k	nowledge	about	vario	us			
concepts of Operations	Research and to identify and develop oper	ational res	earch	mode	els			
from the verbal description of the real system and train them to apply the operations								
research tools that are needed to solve optimization problems.								
Expected Course Outcomes:								

On the successful completion of the course, student will be able to:

On	the successful completion of the course, student will be able to:	
1	Define and formulate linear programming problems and evaluate their applications	K1
2	To understand concepts and terminology of Linear Programming from formulation of mathematical models to their optimization using Simplex Method	K1
3	To comprehend the concept of a Transportation Model and develop the initial solution and optimality checking of the solution	K2
4	To apply the strategies of game theory and to make better decisions while solving business problems	K3
5	Use critical path analysis and programming evaluation and review techniques for timely project scheduling and completion.	К3

K1 - Remember; K2 - Understand; K3 - Apply; K4 - Analyze; K5 - Evaluate; K6 - Create

Unit:1	INTRODUCTION TO OPERATION	9hours
	RESEARCH	

Introduction to Operations Research – Meaning – Scope – Applications - Limitations. Linear programming-Mathematical Formulation-Application in management decision making - Graphical Method-Simplex Method.

Unit:2	TRANSPORTATION AND	9hours
	ASSIGNMENT PROBLEMS	

Transportation problems: Introduction- Finding Initial Basic Feasible solutions- moving towards optimality (non degenerate only) – Maximization in transportation problem-Unbalanced transportation problem. Assignment problem: Introduction –Hungarian Assignment method – Maximization in Assignment problem – Unbalanced Assignment problem.

Un	it:3	GAME THEORY	9hours
		y: Concept of Pure and Mixed strategies – solving 2 x 2	
		dle point. Graphical solution - mx2 and 2xn games.	Solving games by
Do	minance l	Property.	
	• •		
	it:4	NETWORK ANALYSIS	9hours
con	nputations	oles—Construction of network- Critical path —Forward pass—PERT — Time scale analysis - probability of completion of	
floa	ats.		
TT.	•4.5	GEOLIENICING PROPI EM AND DEDI A CEMENTE	10.1
Un	it:5	SEQUENCING PROBLEM AND REPLACEMENT THEORY	10hours
The	eory of Re	placement – Introduction - Replacement models –Replacen	nent of items that
det	eriorates g	radually (value of money does not change with time)	
Un	it:6	CONTEMPORARY ISSUES	02-hours
Exp	pert lectur	es, online seminars – webinars	
No	te: Theor	y and problem shall be distributed as 20% and 80% resp	ectively.
		Total Lecture hours	48hours

Core/Elective/ Supportive	Core Lab 6	0	0	3	2
Pre - requisite	Basic statistics and data handling	Syllab versi		2025 onwa	_
	Cause Ohiastinas				

Course Objectives

- 1. Understand the fundamentals of data visualization concepts and basic chart types.
- 2. Apply essential design principles to design and develop effective visualizations.

Expected Course Outcomes

1	Understand concepts and basic charts using data visualization tools and techniques.	K2
2	Analyze and apply essential design principles to data exploration and visualization.	K4
3	Apply appropriate charts, plots, tables, and maps for complex data analysis.	К3

K1 – Remember K2 – Understand K3 – apply K4- Analyze K5 – evaluate K6- Create

List of Experiments

60 hours

- 1. Create a basic visualization using Google Sheets.
- 2. Demonstrate proper use of the design principles used: "pop-out" or "pre-attentive" attributes, Gestalt Principles, cognitive load and clutter, and static or interactive format.
- 3. Analyze customer's purchases and how much the company is profiting from each customer by create a scatter plot
- 4. Create a table showing total sales by product category, broken down by Year and Month -sales spotlight.
- 5. Create a dual layer map showing total profit by postal code, colorized by profit ratio, and sized by total sales.
- 6 Provided any dataset, create a dashboard consisting of at least 2 KPIs.
- 7. Create a story consisting of at least three story points and must explicitly answer the business question(s) in the project .

Total Practical Hours 72 Hours

Aim of the project work

- 1. The aim of the project work is to acquire practical knowledge on the implementation of the programming concepts studied.
- 2. Each student should carry out individually one project work and it may be a work using the software packages that they have learned or the implementation of concepts from the papers studied or implementation of any innovative idea focusing on application oriented concepts.
- 3. The project work should be compulsorily done in the college only under the supervision of the department staff concerned.

Viva Voce

- 1. Viva-Voce will be conducted at the end of the year by both Internal (Respective Guides) and External Examiners, after duly verifying the Annexure Report available in the College, for a total of 200 marks at the last day of the practical session.
- 2. Out of 200 marks, 160 marks for project report and 40 marks for Viva Voce.

	Capstone Project using Python or R Programming, Data Visualization Tools	L	Т	P	C
Core/Elective/ Supportive	Skill based Subject-4:	-	•	3	2
Pre-requisite	Students should have completed Project I & II Phase – I Strong coding skills in any one programming paper		Syllab Versio		2025 – 26 onwards

Course Objectives:

The main objectives of this course are to:

- 1. To understand and select the task based on their core skills
- 2. To get the knowledge about analytical skill for solving the selected task.
- 3. To get confidence for implementing the task and solving the real time problems.

Expected Course Outcomes:

On the successful completion of the course, student will be able:

1	Select appropriate input, output, form and table design	K3
2	Design code to meet the input requirements and to achieve the required output	K6
3	Compose a project report incorporating the features of the project	K6

K1 - Remember; K2 - Understand; K3 - Apply; K4 - Analyze; K5 - Evaluate; K6- Create

Aim of the project work

Course	code	Data Mining	L	T	P	C
		Elective III	5	-	_	3
Pre-requ	uisite	Programming (Python or Java preferred)		Syllabus Version		025 – 26 nwards
Course Ol	bjectiv	es:		l		
The main	object	ives of this course are to:				
		e fundamentals of data mining and significance				
		riate data mining technique on the large datase		vledge discov	ery	•
		e application of data mining on complex data	objects.			
•		e Outcomes:				
		al completion of the course, student will be able		.1 1	17.0	
1		stand data mining primitives and data pre-proc			K2	
2		prediction and association rule mining for real ations.	life minir	ng	K3	i
3		appropriate Classification techniques for various imensional data using modern tools.	ous proble	ms with	K3	}
4		appropriate Clustering techniques for various asional data using modern tools.	problems	with high	K3	}
5		esize various mining techniques and work in te	ams to dev	velop	K3	}
K1 - Rem		; K2 - Understand; K3 - Apply; K4 - Analyze;	K5 - Eva	luate; K6 – C	reat	e
Unit:1		A MINING FUNDAMENTALS		·		hours
- Technol	logies	e cycle - KDD Process - Kinds of data can be nused -Kinds of Applications targeted - Issues in a Data Pre-processing overview.				
	• •	OCIATION AND CORRELATION			12	hours
CIII2	11000					110 6115
Mining F	requen	t Patterns - Associations and Correlations - 1	Mining M	ethods - A	prio	ri – FP
_	_	g various Kinds of Association Rules – Correla	_			
Association						
Unit:3	CLAS	SSIFICATION			12	hours
Classifica	tion B	asic Concepts – Decision Tree Induction – Bay	yesian Cla	ssification –	Rul	e
		tion — Support Vector Machine - Lazy Learne	rs – Other	classificatio	n m	ethods
		tion and Selection.				
Unit:4		STERING AND OUTLER ANALYSIS				hours
		- Partitioning Methods - Hierarchical Methods				
		- Evaluation of Clustering - Outlier Analysis -	- Outlier d	etection Met	nod	S.
Unit:5	MINI	NG COMPLEX DATA				
		Sequence Mining – Mining graphs and network			12	hours
Spatial M	ining -	- Text Mining – Multimedia Mining – Data M				
			Total Le	cture hours	60	hours

Pig: Introduction to PIG, Execution Modes of Pig, Comparison of Pig with Databases, Grunt, Pig Latin, User Defined Functions, Data Processing operators, Hive: Hive Shell, Hive Services, Hive Metastore, HiveQL, Tables, Querying Data and User Defined Functions. Base: HBase Concepts, Clients, Example, Zookeeper - Building applications with Zookeeper, Oozie-Workflows of Oozie

Unit IV Introduction to Cloud Computing

12 Hours

Defining the Cloud, The Emergence of Cloud Computing, Cloud-Based Services, Grid Computing or Cloud Computing, Components of Cloud Computing, Virtualization, Cloud Computing Deployment Models (Types): Public, Private, Hybrid, Benefits of Using a Cloud Model, Legal Issues in Using Cloud Models, Characteristics of Cloud Computing, Evolution of Cloud Computing, Challenges for the Cloud computing, Grid Computing, Distributed Computing in Grid and Cloud.

UNIT V Cloud Service Models

12 Hours

Communication-as-a-Service (CaaS): Advantages of CaaS, Fully Integrated, Enterprise-Class Unified Communications, Infrastructure-as-a-Service (IaaS): Modern On-Demand Computing, Amazon's Elastic Cloud, Amazon EC2 Service Characteristics, Monitoring-as-a-Service (MaaS), Protection Against Internal and External Threats, Platform-as-a-Service (PaaS): The Traditional On-Premises Model, The New Cloud Model, Key Characteristics of PaaS, Software-as-a-Service (SaaS): SaaS Implementation Issues, Key Characteristics of SaaS, Benefits of the SaaS Model, Jericho Cloud Cube Model.
