

B.Sc. Biotechnology

Syllabus

AFFILIATED COLLEGES

Program Code: 22R

2025 – 2026 onwards

BHARATHIAR UNIVERSITY

(A State University, Accredited with “A++” Grade by NAAC,
Ranked 21st among Indian Universities by MHRD-NIRF)

Coimbatore - 641 046, Tamil Nadu, India

Program Educational Objectives (PEOs)	
The B.Sc., Biotechnology program describe accomplishments that graduates are expected to attain within five to seven years after graduation	
PEO1	Have enormous opportunities to become an effective researcher in the field of Life sciences.
PEO2	Acquire skills to face Various Government competitive exams viz., TNPSC, UPSC and SSC etc.,
PEO3	Become socially responsible with morel and intellectuals.
PEO4	Become an entrepreneur and product developer.
PEO5	Graduates will empower skills to meet the global challenges through current teaching learning methodologies.

Program Specific Outcomes (PSOs)	
After the successful completion of B.Sc., Biotechnology program, the students are expected to	
PSO1	Graduates acquire Problem solving ability- solving social issues and engineering problems
PSO2	Graduates will develop interest in lifelong learning
PSO3	Graduates develop an ability to design and conduct experiments
PSO4	Graduates will be enriched with skill based practical which aid them to become self employed
PSO5	Graduates will obtain requisite knowledge on the structure, function and applications of living organisms and thereby explore it in academia and industry

Program Outcomes (POs)	
On successful completion of the B. Sc. Biotechnology program,	
PO1	The students should be able to demonstrate proficiency in basic science and fundamental biotechnological tools
PO2	The graduates could understand the working principles of advanced biological sciences
PO3	The graduates acquire employability skills in the field of Pharma, food and agricultural industries
PO4	The graduates get motivated towards deep learning, higher studies and research in life sciences
PO5	The graduates develop health and environment awareness towards social responsibility

BHARATHIAR UNIVERSITY, COIMBATORE-641 046.
B.Sc., BIOTECHNOLOGY DEGREE COURSE (Affiliated Colleges)
(FOR THE CANDIDATES ADMITTED FROM THE ACADEMIC YEAR 2025-26 onwards)
SCHEME OF EXAMINATION - CBCS PATTERN

Part	Sub code	Study Components - Course title	Ins.hrs/ week	Examinations				Credit

****No University Examinations. Only Continuous Internal Assessment (CIA)**

*** No Continuous Internal Assessment (CIA). Only University Examinations.**

@University Semester examination will be conducted for 50 marks (As per the existing pattern of examination) and the marks will be converted to 25 marks.

#Naan Mudhalvan – Skill Courses- external 25 marks will be assessed by Industry and internal will be offered by respective course teacher.

*****Health and Wellness – No University Examinations. No Continuous Internal Assessment (CIA)**

List of Elective papers* (Colleges can choose any one of the papers as an elective)		
Elective – I	A	Agricultural Biotechnology
	B	Bioremediation
	C	Introduction to Bioinformatics
Elective – II	A	Medical Biotechnology
	B	Biotechnological approach for wastewater treatment
	C	Genomics
Elective – III	A	Industrial Biotechnology
	B	Bioethics & Biosafety
	C	Proteomics

**Elective papers as listed above or any other new elective can be added based on the need, which can be approved by the University authorities.*

From the 2025 Batch Onwards

1. In semester II Allied –A: Paper II chemistry, unit IV was modified and updated.
2. In Semester III, the content for Skill-Based Subject I – Human Physiology has been reduced and semester IV, Skilled-Based Subject 2, Human pathology has been reduced.

B.Sc., Biotechnology

Question paper format to be followed for Core Practical Examination

Total Marks: 50

No. of Hours: 3 Hrs for Practical - I & II

I Major A	20 Marks
II Minor B	10 Marks
III Identify the spotters: D, E, F, G & H and comment on it (Identification: 1 mark and description: 1 mark)	5x2= 10 Marks
IV Viva	5 Marks
V Record	5 Marks

Note: 2 sets or 2 lots of question papers are preferable for a minimum of 15 students/batch

B.Sc., Biotechnology

Question paper format to be followed for Core Practical Examination

Total Marks: 50

No. of Hours: 6 Hrs for Practical - III & IV

I Major A	15 Marks
II Minor B	8 Marks
III Minor C	8 Marks
IV Identify the spotters: D, E, F, G & H and Comment on it (Identification: 1 mark and description: 1 mark)	5x2= 10 Marks
V Viva	5 Marks
VI Record	4 Marks

Note: 2 sets or 2 lots of question papers are preferable for a minimum of 15 students/batch

Distribution of Marks for Continuous Internal Assessment (CIA) and Comprehensive External Examinations (CEE)

Paper	Maximum Marks	Marks for		Components for CIA		
		CIA	CEE	Tests	Assignment	Others*
Theory (Core / Elective)	50	12	38	09	03	-
Theory (Core / Elective)	75	20	55	10	05	05
Theory (Core / Elective)	100	25	75	15	05	05

*Components for 'others' may include the following:

Class Participation, Case Studies Presentation, Field Work, Field Survey, Group Discussion, Term Paper, Workshop / Conference Participation, Presentation of Papers in Conferences, Quiz, Report / Content Writing, Seminars, etc.

Distribution of Marks for Continuous Internal Assessment (CIA) and Comprehensive External Examinations (CEE)

		CIA	CEE	
			Evaluation	Viva-voce
Project	100	25	50	25
Project	150	40	75	35
Project	200	50	100	50

Pattern of Question Paper – (for core - theory and elective subjects)

The question paper for each of the core and elective papers shall consist of three sections. While Section A shall contain 10 objective type questions, Section B and Section C shall contain questions of descriptive nature. Internal choice (either / or type) shall be given in Section B and Section C. In Section A, there shall be two questions each with four multiple choices from each of the five units. In Sections B and C, there shall be one question with internal choice (either/or type) from each of the five units. The composition of the question paper shall be as given below:

Time: Three Hours

Max. Marks: 75

Section A – (10 x 1 = 10)

Answer *All* the questionsEach question carries *one* mark*Choose the correct answer*

Q. No.1. – Q. No. 10 - Objective questions with four multiple choices

Section B – (5 x 5 = 25)

Answer all the questions

Each question carries *five* marks

Q. No. 11 – Q. No. 15 - Questions with internal choices (either (a) or (b) type)

Section C – (5 x 8 = 40)

Answer all the questions

Each question carries *eight* marks

Q. No. 15 – Q. No. 20 - Questions with internal choices (either (a) or (b) type)

Pattern of Question Paper – (for core – practical subjects)

The question paper for each of the core - practical papers (Statistics Practical I and II, Programming Lab I and II, Statistical Software Practical using SPSS and MINITAB, and Statistical Software Practical using R shall consist of four questions with internal choice. The maximum marks for each of the practical papers shall be 60. A candidate shall attend all the four questions, each of which shall carry 15 marks. The composition of the question paper shall be as given below:

Time: Three Hours

Max. Marks: 60

Answer all the questions

Each question carries *fifteen* marks

Q. No. 1 – Q. No. 4 - Questions with internal choices (either (a) or (b) type)

Pattern of Question Paper – (for supportive subject)

The question paper for each of the supportive papers shall consist of three sections. While Section A shall contain 5 objective type questions, Section B and Section C shall contain questions of descriptive nature. Internal choice (either / or type) shall be given in Section B and Section C. In Section A, there shall be one question each with four multiple choices from each of the five units. In Sections B, there shall be one question with internal choice (either/or type) from each of the five units and in Section C, there shall be three questions with internal choice (either/or type from all the five units. The composition of the question paper shall be as follows:

Time: Hours

Max. Marks: 38

Section A – (5 x 1 = 5)

Answer *All* the questionsEach question carries *one* mark

Q. No.1. – Q. No. 5 - Objective questions with four multiple choices

Section B – (5 x 3 = 15)

Answer all the questions

Each question carries *three* marks

Q. No. 6 – Q. No. 10 - Questions with internal choices (either (a) or (b) type)

Section C – (3 x 6 = 18)

Answer all the questions

Each question carries *six* marks

Q. No. 11 – Q. No. 13 - Questions with internal choices (either (a) or (b) type)

First Semester

Course code	13A	SEMESTER I: CELL BIOLOGY	L	T	P	C
Core		CORE PAPER: I	5		-	4
Pre-requisite		Students should have studied basic science at school level	Syllabus Version		2025-2026	
Course Objectives:						
The main objectives of this course :						
• Students will understand the structures and purposes of basic components of prokaryotic and eukaryotic cells, especially macromolecules, membranes, and organelles • Students will understand how these cellular components are used to generate and utilize energy in cells • Students will understand the cellular components underlying mitotic cell division • On successful completion of the subject the student should have understood the Structural features, Organelles and the cellular mechanisms.						
Expected Course Outcomes:						
On the successful completion of the course, student will be able to:						
1	Design the model of a cell.					K6
2	Differentiate the structure of prokaryotic and eukaryotic cell.					K2
3	Explain the organization of Genes and chromosomes, chromosome morphology and its aberrations					K2
4	Compare and contrast the events of cell cycle and its regulation					K4
5	Explain the communications of cells with other cells and to the environment.					K2
6	To know the cell organelles and locate its parts along with functions					K1
K1 - Remember; K2 - Understand; K3 - Apply; K4 - Analyze; K5 - Evaluate; K6 – Create						
Unit:1 Basics of Cells 10 hours						
Cell as a basic unit: discovery of the cells, classification of cell types, development of cell theory, early chemical investigation in cell biology. Prokaryotic and Eukaryotic cell organization.						
Unit:2 Mechanisms of Cell Transport 15 hours						
Cell transport phenomenon: membrane architecture. Active, Passive, diffusion and osmosis. Chemistry of carbohydrates, lipids, proteins and nucleic acids.						
Unit:3 Cytoplasmic Compartments of The Cell 15 hours						
Structure and function of cytoplasmic compartments of the cell: ribosome and protein synthesis, energy flow through mitochondrion, chloroplast and photosynthesis, Golgi apparatus, lysozymes and micro bodies, endoplasmic reticulum, vacuoles, peroxysomes, lysosomes and Nuclear compartment. Heterochromatin and euchromatin, polytene chromosomes.						
Unit:4 Cell Division 13 hours						
Cell division in prokaryotes and eukaryotes: Cell cycle, mitosis, meiosis, crossing over and characteristics of cancer. Apoptosis, Stem cell, Prions.						

Unit:5	Specialized Cells and Interaction	15 hours
Integrative and specialized cellular events, cell-cell signalling, specialized cells nerve cells, sperm cells, microfilaments, microtubules, muscle cells. Cells of vision, Nucleocytoplasmic interaction, cell cloning.		
Unit:6	Contemporary Issues	2 hours
Expert lectures, online seminars – webinars		
Total Lecture hours		70 hours
Text Book(s)		
1	Molecular cell biology, Lodish, Baltimore, Scientific American books, 1994	
2	Essential Cell Biology-4 th edition - Bruce Alberts et al., 2014	
3	Molecular and cell biology, Stephen L Wolfe, Wordsworth Publishing company 1993	
Reference Books

Course code	13B	BIOINSTRUMENTATION	L	T	P	C
Core		CORE PAPER: II	4		-	4
Pre-requisite		Students should have studied the principles of analytical instruments	Syllabus Version		2025-2026	
Course Objectives:						
The main objectives of this course :						
- The student should have understood the analytical techniques in the field of Biotechnology - To make the students to understand the basic principles of Bioanalytical instruments						
Expected Course Outcomes:						
On the successful completion of the course, student will be able to:						
1	Demonstrate the basics of instrumentation by analysis					K4
2	Exemplify the structure of atoms and molecules by using the principles of spectroscopy					K1
3	Evaluate by Separating and Purifying the components					K5
4	understand the need and applications of imaging techniques					K3
5	categorize the working principle and applications of fluorescence and radiation based techniques					K2
K1 - Remember; K2 - Understand; K3 - Apply; K4 - Analyze; K5 - Evaluate; K6 – Create						
Unit:1 Basics instruments 12 hours						
pH meter, Buffer of biological importance, Centrifuge- Preparative, Analytical and Ultra, Laminar Air Flow, Autoclave, Hot Air Oven and Incubator.						
Unit:2 Spectroscopic Techniques 10 hours						
Spectroscopic Techniques: Colorimeter, Ultraviolet and visible, Infra red and Mass Spectroscopy						
Unit:3 Chromatographic and Electrophoresis Techniques 12 hours						
Chromatographic Techniques: Paper, Thin Layer, Column, HPLC and GC. Electrophoresis Techniques: Starch Gel, AGE, PAGE.						
Unit:4 Imaging techniques 12 hours						
Principle, Instrumentation and application of ECG, EEG, EMG, MRI, CT and PET scan radioisotopes.						
Unit:5 Fluorescence and radiation based techniques 12 hours						
Spectrofluorimeter, Flame photometer, Scintillation counter, Geiger Muller counter, Autoradiography.						
Unit:6 Contemporary Issues 2 hours						
Expert lectures, online seminars – webinars						
Total Lecture hours					60 hours

Core		PRACTICAL I			3 in sem 1 & 4 in sem 2	4
Pre-requisite		Students must know about basic knowledge about basic science and school level. Two hours laboratory each week for Odd semester four hours laboratory each week for even semester	Syllabus Version		2025-2026	
Course Objectives:						
The main objectives of this course are to:						
• To introduce an fundamentals of cell biology and microbiology techniques • To teach students the basic techniques and instrument principles in biotechnology • To give hands on microbiology and cell biology experiments						
Expected Course Outcomes:						
On the successful completion of the course, student will be able to:						
1	Be aware of the laboratory rules and regulations.					K1
2	Understand the importance, evolution and diversity of cells and preparation of buffers					K2
3	Learns to visualize the cells by employing different types of microscopes					K2
4	Bring in the concepts of microbial culturing techniques.					K4
5	Analysis of phenotypic characterization of known and unknown microbes and basic instruments					K4

Course code	1AA	SEMESTER I: BASIC MATHEMATICS	L	T	P	C
Allied		ALLIED A : Paper I :	4		-	3
Pre-requisite		Students should have the basic understanding of Algebra, Matrix, Differentiation, and Integration & Central Tendency.	Syllabus Version		2025-2026	
Course Objectives:						
The main objectives of this course :						
• Students will understand the Binomial Series, Logarithmic Series & Summation of the Series. • Students will understand the types of Matrices, Inverse of the Matrix, Eigen values & Vectors, Simultaneous Linear Equations. • Students will understand about Differentiation & Integration. • Students will gain knowledge about Central Tendency & Correlation.						
Expected Course Outcomes:						
On the successful completion of the course, student will be able to:						
1	Student can understand, apply & analyze about binomial, exponential, logarithmic & summation series.				K2,K3,K4	
2	Students can apply the inverse matrix problem in cryptography.				K3	
3	Remember & Understand about differentiation.				K1, K2	
4	Understand the integration by parts.				K2	
5	Students can apply the Central Tendency in real life.				K3	
K1 - Remember; K2 - Understand; K3 - Apply; K4 - Analyze; K5 - Evaluate; K6 – Create						
Unit:1	Series				12 hours	
Binomial, Exponential and Logarithmic series (Statement only) – Applications to summation of series only.						
Unit:2	Matrix				10 hours	
Quadratic Equation – Matrices – Determinant of a matrix – Inverse of a matrix – Characteristic equation of a matrix – Eigen values – Solutions of simultaneous linear equations in three variables using matrices.						
Unit:3	Differentiation				12 hours	
Differentiation of algebraic – Exponential logarithmic and trigonometric functions – physical interpretations of derivatives with reference of velocity and acceleration – Application of differentiation of maxima and minima (simple problems)						
Unit:4	Integration				12 hours	
Partial differentiation (Simple problems) – Integration of simple algebraic, exponential and trigonometric functions – substitution method – Integration by parts.						
Unit:5	Central Tendency & Correlation				12 hours	
Measures of central tendency – Mean, Median, Mode - Measure of dispersion – Quartile deviation - Mean deviation - Standard deviation - Corelation – Karl pearson’s coefficient of correlation – rank correlation.						

Unit :6	Contemporary issues	2 hours
Expert lectures, online seminars – webinars		
Total Lecture hours		60 hours
Reference Books

Second Semester

Course code	23A	SEMESTER II: MICROBIOLOGY	L	T	P	C
Core		CORE PAPER III	5		-	4
Pre-requisite		Students should have knowledge about the microbes and its uses	Syllabus Version		2025-2026	
Course Objectives:						
The main objectives of this course are :						
1. To appreciate the efforts of the Scientists for the development of Microbiology and Microscopes.						
2. To equip the students with the real knowledge of working with different types of Microbes.						
3. To understand the variety of microorganisms and to analyse their true potential.						
Expected Course Outcomes:						
On the successful completion of the course, student will be able to:						
1	Remember and recall the historical events which paved the development of different types of microscopes.					K1
2	Understand and differentiate the different types of microbes.					K2
3	Analyze the media composition and grow the desired microbe.					K3
4	Apply the knowledge to enumerate the microorganisms from natural environment.					K4
5	Evaluate the success of understanding the viruses.					K5
K1 - Remember; K2 - Understand; K3 - Apply; K4 - Analyze; K5 - Evaluate; K6 – Create						
Unit:1	Microscope and its Types				14-- hours	
Definition and scope of microbiology - A general account on microbial diversity. Basic principles in microscopy, Types of microscopes- light, dark, phase contrast, fluorescent and electron microscope- (Transmission and Scanning electron).						
Unit:2	Microbes and their Reproduction.				13-- hours	
A detailed account of General structure, growth and reproduction of Bacteria, fungi and Virus. Economic and industrial importance of yeast and moulds.						
Unit:3	Media and Culture Techniques				15-- hours	
Microbiological Media: Types, preparation, methods of sterilization; enumeration of microorganisms in soil, water and air; isolation of microorganisms from Environment and infected tissue; Techniques of pure culture, maintenance and Preservation; Staining: stains and types of staining;						
Unit:4	Microbes and its associations				14-- hours	
Physiology and biochemistry of microbes- Photo-autotrophs, Chemo-autotrophs, Parasitism, Saprophytism, Mutualism and Symbiosis, Commensalisms, endozoic microbes.						
Unit:5	Metabolism And Viruses				12-- hours	
Nitrogen metabolism including Nitrogen fixation (Symbiotic and asymbiotic), Lipid metabolism, Secondary metabolism, microbial pathogens of plants (TMV, Gemini virus), animals (Yersinia pestis, rabies) and humans (HIV, HSV), Role of microbes in biogeochemical cycles.						

Unit:6	Contemporary Issues	2 hours
Expert lectures, online seminars – webinars		
	Total Lecture hours	70 hours

Course code	2AH	Semester II: Allied A: CHEMISTRY	L	T	P	C
Allied			4		-	3
Pre-requisite	Students should have studied the basics of chemistry		Syllabus Version		2025-2026	
Course Objectives:						
The main objectives of this course:						
- Students will understand the basics of bonding - Students could gain knowledge on chemistry in day today life						
Expected Course Outcomes:						
On the successful completion of the course, student will be able to:						
1	Understand the importance of bonding and order					K1 & K2
2	Apply the gained knowledge in analyzing the water parameters					K3
3	Analyse the adulteration in food					K4
4	Evaluate the role of agricultural, pharmaceutical and textile chemistry					K5
5	Think innovatively to solve the environmental issues					K6
K1 - Remember; K2 - Understand; K3 - Apply; K4 - Analyze; K5 - Evaluate; K6 – Create						
Unit:1 Inorganic chemistry 10 hours						
Chemical bonding: Molecular orbital theory, bonding, antibonding and non-bonding orbitals. Molecular orbitals. MO configuration of H ₂ , N ₂ , O ₂ , F ₂ . Bond order. Covalent bond: orbital overlap, hybridization, geometry of organic molecules- CH ₄ , C ₂ H ₄ , and C ₂ H ₂ .						
Unit:2 Environmental chemistry 14 hours						
Concept and scope of environmental Chemistry-Nomenclature: Pollutant, contaminant, receptor, sink, pathways of a pollutant. Water – Sources of water, qualities of potable water, soft and hard water, methods of removal of hardness- water pollution- dissolved oxygen, chemical oxygen demand (COD), biochemical oxygen demand (BOD)-Environmental segments. Atmosphere: Composition and structure of atmosphere, particles, ions and radicals in the atmosphere, Air Pollution: Air Pollutants, e.g. carbon monoxide, nitrogen oxides, hydrocarbons, oxides of sulfur, photochemical smog, acid rain and particulates.						
Unit:3 Food chemistry 10 hours						
Food and Nutrition – Carbohydrates, Proteins, Fats, Vitamins and Minerals –definition, classification and their importance as food constituents- Balanced diet- Calorie. Food Adulteration- types and detection methods.						
Unit:4 Pharmaceutical chemistry 12 hours						
Drug Discovery and Design: Identifying and synthesizing new chemical entities with therapeutic potential. Drug Synthesis- Developing efficient and scalable methods to produce drug compounds. Drug Metabolism and Pharmacokinetics: Understanding how the body absorbs, distributes, metabolizes and excretes drugs.						

Unit:5	Agricultural and textile chemistry	12 hours
Fertilizers: Effect of Nitrogen, potassium and phosphorous on plant growth –commercial method of preparation of urea, triple superphosphate. Complex fertilizers and mixed fertilizers – their manufacture and composition. Secondary nutrients – micronutrients – their function in plants. Dyes: azo and triphenylmethane dyes- Preparation one example-Methyl Orange, Malachite green.		
Unit:6	Contemporary Issues	2 hours
Expert lectures, online seminars – webinars		
Total Lecture hours		60 hours

Course code	2PH	Semester : II: ALLIED CHEMISTRY PRACTICAL	L	T	P	C
Allied		Allied Practical	-	-	3	2
Pre-requisite	Students must know about basic knowledge on volumetric analysis and solution preparation		Syllabus Version		2025-2026	
Course Objectives:						
The main objectives of this course are:						
- To learn about the estimation of unknown solution from known solution - To gain knowledge on identification of functional group of given compound						
Expected Course Outcomes:						
On the successful completion of the course, student will be able to:						
1	Understand the practical skills in chemistry				K2	
2	Acquire skills in handling of chemicals				K2	
3	Calculate the normality of a given solution				K3	
4	Analyse the functional groups of the given compound				K4	
5	Evaluate the parameters of water				K5	
K1 - Remember; K2 - Understand; K3 - Apply; K4 - Analyze; K5 - Evaluate; K6 – Create						
VOLUMETRIC ANALYSIS						
Estimation of sodium hydroxide using standard sodium carbonate.					Hours	
Estimation of hydrochloric acid- standard oxalic acid.					3	
Estimation of ferrous sulphate- standard Mohr salt solution.					3	
Estimation of Total Hardness of water					3	
Estimation of available chlorine in the given sample of bleaching powder.					3	
ORGANIC ANALYSIS: systematic analysis						
Detection of Elements (N, S, Halogens).					3	
To distinguish between aliphatic and Aromatic.					3	
To distinguish between saturated and unsaturated.					3	
Functional group tests for phenols, acids (mono and di), aromatic primary amine, amide, diamide, carbohydrate.					3	
Detection of Elements (N, S, Halogens).					3	
Total hours					30	
Text Book(s)

Third Semester

Course code	33A	SEMESTER III : BIOCHEMISTRY	L	T	P	C
Core	CORE PAPER: IV		4		-	4
Pre-requisite	Students should have studied about environmental science in previous semester and school level		Syllabus Version		2025-2026	
Course Objectives:						
On successful completion of the subject the student should have understood: Basic Structure and metabolism of Biomolecules.						
Expected Course Outcomes:						
On the successful completion of the course, student will be able to:						
1	Understand the significance of Biochemistry.					K1
2	Describe the chemistry of carbohydrates, lipids, proteins and amino acids.					K2
3	Understand the basics of enzymes.					K1
4	Describe the classification and structural organization of proteins					K3
5	The students will understand about the structure and function of nucleosides and nucleotides.					K5
6	Basic knowledge of structure and functions of major bio-molecules					K1
K1 - Remember; K2 - Understand; K3 - Apply; K4 - Analyze; K5 - Evaluate; K6 – Create						
Unit:1	BIOMOLECULES				12 hours	
Structure of atoms and biomolecules: Atomic theory, Valency, Atomic weight, Molecular weight, Molarity. Chemical Bonding - Electrostatic, Covalent, Ionic and Vander waals, Structure of water molecules, properties and ionization of Water, pH and buffers. Laws of Thermodynamics.						
Unit:2	ENZYMES				12 hours	
Enzymes and co-enzymes, IUB classification and nomenclature of enzymes, regulation of enzyme activity, active sites, activators and inhibitors; Isoenzymes, allosteric enzymes.						
Unit:3	CARBOHYDRATES				12 hours	
Definition, Nomenclature, Classifications and Structures of sugars. Structural features of polysaccharides. Glycolysis, TCA cycle, Glycogen breakdown and synthesis, Gluconeogenesis, Bioconversion of pentoses and hexoses,						
Unit:4	LIPIDS				12 hours	
Definition, Nomenclature, Classifications and Structure of lipids, Metabolism of lipids: Fatty acid biosynthesis and oxidations. Amino acids and peptides – classifications, Structural Organization of protein (primary, secondary, tertiary and Quaternary), Functions of proteins.						
Unit:5	NUCLEIC ACIDS				10 hours	
Definition, Nomenclature, Classifications and Structure of nucleic acids, Biosynthesis and degradation of nucleic acids (purines and pyrimidines) Integration of metabolism and regulations.						

Unit:6		2 hours
Expert lectures, online seminars – webinars		
Total Lecture hours		60 hours

Course code	33B	GENETICS	L	T	P	C
Core		Core Paper V	3			4
Pre-requisite		Students must have knowledge about Genetics	Syllabus Version		2025-2026	
Course Objectives:						
The main objectives of this course are to: • Understand on Historical introduction to Genetics and genetic materials • Understanding the concept and principles of genetics exchanges and • Its expression in host and to provide an idea about gene regulations and its control.						
Expected Course Outcomes:						
On the successful completion of the course, student will be able to:						
1	Obtain acquaintance on historical overview of microbial genetics and genetic materials					K3
2	Comprehend the concept of replication of genetic materials					K2
3	Understand about regulation of gene expression and mutation					K1
4	Demonstrate the genetic exchange mechanism in microorganisms					K6
5	Gain knowledge on Mutation					K5
6	Grasp the Basic of genetics and their role					K4
K1 - Remember; K2 - Understand; K3 - Apply; K4 - Analyze; K5 - Evaluate; K6 – Create						
Unit:1	Basics of Genetics				10 hours	
History of Genetics - Mendelian Principles, Segregation, Independent Assortment, Dominance. Multiple alleles, Incomplete dominance, Over dominance and co dominance.						
Unit:2	Genetic Linkage and Mapping				12 hours	
Epistasis, lethal genes. Sex determination and sex linkage in diploids, linkage and crossing over, gene mapping. Chromosomal theory of inheritance, maternal effects.						
Unit:3	Chromosomal Variation				12 hours	
Chromosomal variation in number, Changes in Chromosomal structure, Genetics of Heamoglobin, Transposable elements in prokaryotes and eukaryotes.						
Unit:4	Genetic Structure				10 hours	
Structure of chromosome, fine structure of Gene, cistron, recon, Structure of Eukaryotic gene, Experimental evidence for DNA as the genetic material, cytoplasmic genetic systems- mitochondria and chloroplast DNA.						
Unit:5	Population genetics				12 hours	
Genetic control of Development in Drosophila. Population genetics, calculating gene frequency, factors affecting gene frequency. Pedigree analysis and genetic counselling.						
Unit:6	Contemporary Issues				2 hours	
Expert lectures, online seminars – webinars						
Total Lecture hours					60 hours

Course code	43P	LAB IN GENETICS AND BIOCHEMISTRY	L	T	P	C
Core		CORE PRACTICAL II (GENETICS & BIOCHEMISTRY)	-	-	2 in sem 3 & 3 in sem 4	4
Pre-requisite		Students must be equipped with the basic knowledge of Genetics and concepts of Biochemistry from their previous semester	Syllabus Version		2025-2026	
Course Objectives:						
The main objectives of this course are to:						
- To teach students the concept of Mitosis and visualize the sex chromatin under the microscope. - To give hands on experience in quantification of important biological constituents of cell.						
Expected Course Outcomes:						
On the successful completion of the course, student will be able to:						
1	Successfully quantify the important biological constituents of cell.					K5
2	Analyze the sex chromatin present in different cells.					K4
3	Examine and evaluate the stages of Mitosis.					K5
4	Develop the skills of DNA isolation technique					K2
5	Could able to separate and interpret the mixture of components					K4
K1 - Remember; K2 - Understand; K3 - Apply; K4 - Analyze; K5 - Evaluate; K6 – Create						
BIOCHEMISTRY			Hours			
Paper Chromatography (Preparation of reagents and performance of Paper chromatography).			2+2			
Estimation of Protein - Lowry's method.(Preparation of reagents and estimation of protein)			2+2			
Estimation of DNA (Preparation of reagents , estimation and calculation)			2+2			
Estimation of RNA by Orcinol method (Preparation of reagents , estimation and calculation)			2+2			
Estimation of Sugars by Anthrone method (Preparation of reagents, performance and calculation)			2+2			
Estimation of total free amino acids (Preparation of reagents ,performance and calculation)			2+2			
Estimation of Lipids (Preparation of reagents ,lipid estimation and calculation)			2+2			
Analysis of Oils- Iodine Number- Saponification Value -Acid Number. (Preparation of reagents and determination)			2+2			
Quantification of Vitamin C. (Preparation of reagents and performance)			2+2			
Total Hours			36			
GENETICS			3 Hrs/Week			
Isolation of Genomic DNA From Blood			3			
Agarose Gel Electrophoresis			3			
Observation of Bands			3			
Mitotic Preparation - Onion Root Tip			3			
Study of Prophase			3			
Study of Metaphase			3			

Study of Anaphase		3
Study of Telophase		3
Buccal Smear Preparation		3
Examination of Sex Chromatin		3

Course code	3AA	Allied B : Computer Applications- I :	L	T	P	C
Allied	INTRODUCTION TO COMPUTER		3		-	3
Pre-requisite	Students should have known the basics of computer		Syllabus Version		2025-2026	
Course Objectives:						
The main objectives of this course are to:						
1. To Develop their skills, the necessary for office automation industry oriented applications						
2. To develop the basic skills required to write network ports						
Expected Course Outcomes:						
On the successful completion of the course, student will be able to:						
1	Use basic fundamental utilities which are required again and again on daily basis to work on operating system.					K6
2	Configure important services to connect ports.					K2
3	To inculcate the basic knowledge on Computer Networks and technologies					K2
4	To impart strong knowledge on spreadsheet application in biological data analytics					K4
5	Enable to know about basic presentation graphical representation of data.					K2
6	Make understand the types of Internet and its usage in industry					K1
K1 - Remember; K2 - Understand; K3 - Apply; K4 - Analyze; K5 - Evaluate; K6 – Create						
Unit:1	Windows and ports				10 hours	
Windows: Definition of Operating System, Functions of OS, types of OS. Desktop icons and their functions: My computer, My documents, My Network Place, Recycle Bin, Files, Folder, Local Disk Drive, CD/DVD Drive, Pen Drive.						
Ports: PS/2 keyboard and mouse port, USB OTG, Ethernet port, serial port, parallel port, HDMI port, VGA port, display port, USB A-Type, USB B-Type, USB C-Type, Type A Mini and micro port, Type B Micro.						
Unit:2	Basics of Networks and MS word				8 hours	
Basics of Networks: LAN, WAN, MAN, Wireless, Home Networks, Connection-oriented and connectionless services, DNS – E-mail.						
MS Word: Features, creating, saving and opening documents in word, interface, toolbars, ruler, menus, keyboard shortcut keys, Editing, previewing, printing and formatting a document, advanced features of MS Word, find and replace.						
Unit:3	Spreadsheet				8 hours	
Spreadsheet: Creating worksheet, entering and editing text, Saving, modifying worksheet, range selection, copying and moving data, inserting and deleting rows and columns, naming Worksheet. Setting Formula: Finding total in a column or row, mathematical operations like addition, subtraction, multiplication, division using formulas. Printing worksheet, Creating charts, Pivot tables.						
Unit:4	PowerPoint				8 hours	
PowerPoint: Basic of power point, creating and editing slides, formatting slides, Master slides, Templates, coloring text and objects, Transitions, heading slides, using clip art gallery, chart creations, managing files.						

Unit:5	Internet of Things and Development of India in IOT	9 hours
Internet of Things: Introduction, Definition & characteristics of IOT, IOT in everyday life, Internet of everything. IOT Applications: Intelligent Traffic systems, Smart Parking, Smart cities and location sharing, Smart Agriculture, IOT in education.		
Development of India in IOT: Solar Plant System, ATM chip card system , IOT in health care industry, IOT in rural empowerment. Challenges in IOT: Big Data Management, Connectivity challenges.		
Unit:6	Contemporary Issues	2 hours

Course code	3ZA	Subject Title: HUMAN PHYSIOLOGY	L	T	P	C
Core		Skill Based Subject 1	2		-	2
Pre-requisite		Students must have studied about Human Physiology in previous semester/ school level	Syllabus Version		2025-2026	
Course Objectives: To understand various organs of human, their physiological activities and the disorders						
The main objectives of this course are to: understood the various systems in human body and their activities						
Expected Course Outcomes:						
On the successful completion of the course, student will be able to:						
1	understand various systems in human body.					K2
2	Know the activities of various organs.					K1
3	apply terminologies applicable to pathology and describe the courses and natural progress of human disease.					K3
4	outline the current research in disease-specific disciplines and what is currently known about treatment options for various human diseases.					K4
5	know about Kidney functions and disorders.					K5
K1 - Remember; K2 - Understand; K3 - Apply; K4 - Analyze; K5 - Evaluate; K6– Create						
Unit:1	Skeletal Muscles and Nervous System				10 hours	
Muscle- skeletal muscles – composition – functions and properties of plain (smooth) and cardiac muscles – electromyography, Nervous System – organization – basic functions of synapses and transmitter substances.						
Unit:2	Blood & Body Fluid				10 hours	
Blood & Body Fluid – blood cell –Haematosi s – determination of coagulation – plasma proteins – platelets – leucocytes. Bone marrow – functions of tissue fluid – Lymph nodes Cardio Vascular System – Heart as pump – rhythmic excitation - biliary System-liver and its functions.						
Unit:3	Digestive system				8 hours	
Digestive System – digestive tract – gastrointestinal function – motility– secretory functions of alimentary tract – digestion and absorption. Excretion – functions of kidney – renal associated mechanisms - extra cellular and intracellular fluids – osmolality.

Fourth Semester

Course code	43A	Semester IV: MOLECULAR GENETICS	L	T	P	C
Skill Based	CORE PAPER: VI		4		-	4
Pre-requisite	Students must know about basic knowledge about molecular genetics/basic science in their previous semester and school level		Syllabus Version		2025-2026	
Course Objectives:						
The focus will be on understanding central principles and fundamental mechanisms for the organization, replication, expression, variation, and evolution of the genetic material, as well on methods for molecular genetic analyses and gene technology.						
Expected Course Outcomes:						
On the successful completion of the course, student will be able to:						
1	To remember the Organization of genome.				K1	
2	To understand Structure and function of DNA.				K2	
3	To describe the transcriptional regulation in prokaryotes.				K2	
4	To analyze the operon concept-lac operon.				K4	
5	Evaluate the post translational modifications and folding of newly assembled polypeptides.				K5	
K1 - Remember; K2 - Understand; K3 - Apply; K4 - Analyze; K5 - Evaluate; K6 - Create						
Unit:1	GENOME STRUCTURE, FUNCTION				12 hours	
Organization of genome – Structure and function of DNA and RNA. Experiment to prove semiconservative mode of replication. DNA replication in prokaryotes and eukaryotes. Types- unidirectional, bidirectional and theta model replication. Enzymology of replication.						
Unit:2	GENE EXPRESSION				12 hours	
Gene as the unit of expression- Co linearity, Transcription, post transcriptional modifications (mRNA, tRNA, rRNA), transcriptional regulation in prokaryotes (operon concept-lacoperon), inhibitors of transcription. Elucidation of genetic code.						
Unit:3	TRANSLATION				10 hours	
Translation of protein – post translational modifications and folding of newly assembled polypeptides, translational regulations, signal sequences and protein export.						
Unit:4	GENE MUTATION				12 hours	
Gene mutation – Biochemical basis of mutations – types of mutations- spontaneous and induced mutations; Ames test for mutation; DNA damage – types of DNA repair mechanisms – photo reactivation excision repair, post replication recombinant repair, SOS repair.						
Unit:5	GENETIC RECOMBINATION				12 hours	
Recombination - Homologous and non-homologous recombination, including transposition, site specific recombination. Genetic exchange – bacterial transformation, transduction, conjugation and their mapping.						

Unit:6	Contemporary Issues	2 hours
Expert lectures, online seminars – webinars		
Total Lecture hours		60 hours
Reference Books		
1	Basic Genetics by D.L. Hartl 1991, Jones & Bartlett publications.	
2	Microbial Genetics, Friefelder 1987 – Jones & Bartlett publications	
3	Molecular Biology of the gene 4th edition by Watson et al, The Benjamin / Cummings co	
4	Molecular Cell Biology by Lodish 1994, Baltimore Scientific American Brooks

Course code	4AA	<u>Allied B : Computer Applications- II:</u>	L	T	P	C
Allied		‘C’ AND PYTHON PROGRAMMING	4		-	3
Pre-requisite	Students should have known the basics of computer		Syllabus Version		2025-2026	
Course Objectives:						
The main objectives of this course are : To learn about the fundamentals of C programming and Python language concepts.						
Expected Course Outcomes:						
On the successful completion of the course, student will be able to:						
1	Understand the students have the programming ability in C Language.					K6
2	Ability to write C Programming for logical concepts.					K2
3	Ability to design and write application to manipulate coding logics for biological concepts.					K2
4	Develop their own applications to analysis with data.					K4
5	To inculcate knowledge on basic Python programming skills.					K2
K1 - Remember; K2 - Understand; K3 - Apply; K4 - Analyze; K5 - Evaluate; K6 – Create						
Unit:1						
Computer Algorithms and Fundamentals in C					10 hours	
Computer Algorithms: Basics of Algorithms- Pseudo code-Flowchart-Stack-Queues. Fundamentals in C: History of C- Basic Structure of a C program- Simple C Program- Character set - C tokens - Keywords - Identifiers - Constants – Variables – Data Types -Declaration of Variable - Assigning Values to Variables –Initialization.						
Unit:2						
Operators and Expressions: Arrays					14 hours	
Operators and Expressions: Arithmetic operators – relational operators – logical operators – assignment operators – increment and decrement operators – conditional operators – special operators – arithmetic expression – evaluation of expression – Precedence of arithmetic operators – type conversion in expression – operator precedence and associativity – mathematical functions. Arrays: Introduction – One dimensional array – declaration of array – Initiating on two and multidimensional arrays.						
Unit:3						
Decision Making , Branching and looping					10 hours	
Decision Making and Branching: Introduction to if, if...else, nesting of if ...else statements- else if ladder – The switch statement, The ?: Operator – The goto Statement. Decision Making and Looping: Introduction - while loop –do loop –do while lopp –for loop –Nested Loops–break–continue–goto–exit–return.						

Unit:4	Python	12 hours
Python: About python, features of python, python set up, fundamentals of python, values and data types, variables, key word, identifier of python, quotations, indentation, multi line statement, input-output and import function in python, advantages and disadvantages of python.		
Unit:5		12 hours
Fruitful functions in python: Defining a function, function call, types of function, python function arguments, composition, python recursion and python lambda function.		
Unit:6	Contemporary Issues	2 hours
Expert lectures, online seminars – webinars		
Total Lecture hours		60 hours

Course code	43Q	SEMESTER IV: ALLIED PRACTICAL	L	T	P	C
Allied	COMPUTER APPLICATIONS I & II			-	2	2
Pre-requisite	Students must know about basic knowledge on volumetric analysis and solution preparation		Syllabus Version		2025-2026	
Course Objectives:						
The main objectives of this course are:						
To impart fundamentals concepts in basic programming skills for students						
Expected Course Outcomes:						
On the successful completion of the course, student will be able to:						
1	Understand the practical skills in office oriented applications				K2	
2	Acquire skills in handling internet				K2	
3	Write programs which employs basic concepts of C				K3	
4	Ability to develop C Programming that allows applications to make efficient skills				K4	
5	Write programs which employs basic concepts of python for biological purpose				K5	
K1 - Remember; K2 - Understand; K3 - Apply; K4 - Analyze; K5 - Evaluate; K6 – Create						
					Hours	
To compose, send a mail, forward a mail and to reply for a mail.					2	
To send a mail to a large number of recipients using cc and bcc options.					2	
To search a thing using a search engine and to upload your resume with any one job portal.					2	
Create a excel program for Student mark list.					2	
Create a power point presentation for anyone topic in biotechnology with minimum 10 slides.					2	
Write a C program to find the sum, average, standard deviation for a given set of numbers.					2	
Write a C program to generate n prime numbers.					2	
Write a C program to generate Fibonacci series.					2	
Write a C program to sort the given set of numbers in ascending order.					2	
Write a python program that displays the following information: Your name, Full address, Mobile number, College name, Course subjects.					2	
Write a python program to make a simple calculator					2	
Write a python program to find the largest three integers using if-else and conditional operator.					2	
Total hours					24

Course code	4ZB	HUMAN PATHOLOGY	L	T	P	C
Core		Skill Based Subject 2	3			2
Pre-requisite		Students must know about the basics of physiology and disease	Syllabus Version		2025-2026	
Course Objectives:						
The main objectives of this course are to:						
- Know about the concept of pathology - Understand the metabolic disorders and complications involved.						
Expected Course Outcomes:						
On the successful completion of the course, student will be able to:						
1	Distinguish the metabolic disorders in human being					K4
2	Explain the basic nature of diseases and their causes					K2
3	Apply knowledge of pathology in disease diagnosis and management					K3
4	Acquire knowledge to maintain the healthy body					K1
5	Evaluate the condition of body to prevent the diseases.					K5
K1 - Remember; K2 - Understand; K3 - Apply; K4 - Analyze; K5 - Evaluate; K6 – Create						
Unit:1						
Unit:1		Kidney disorder	13 hours			
Disorders of Kidney: acute renal failure, chronic renal failure, proteinuria and nephritic syndrome and urinary calculi. Disorders of Liver: Hepatitis, acute liver failure, Cirrhosis.						
Unit:2						
Unit:2		Metabolic disorder	15 hours			
Diabetes mellitus - Etiology and pathogenesis, diagnosis and management. Diabetes in pregnancy.						
Disorders of Plasma proteins and enzymes: Hypo albuminaemia, hypogamma globulinaemia. hypergamma globulinaemia. Alkaline phosphatase, Creatine kinase.						
Types of hyperlipidaemias. Lipoprotein deficiency-abetalipoproteinaemia. Diseases of Heart- Myocardial infarction, Heart failure and Hypertension.						
Unit:3						
Unit:3		Hormonal disorder and cancer	15 hours			
Disorders of hormones: Acromegaly and gigantism, Cushing's disease, Conn's syndrome, congenital adrenal hyperplasia (CAH).Hyperthyroidism, hypothyroidism, goiter and thyroid cancer.Metabolic aspects of cancer: Para proteins, Human chorionic gonadotrophin (hCG), markers of prostatic cancer, enzymes as tumour markers and Carbohydrate antigen (CA) markers.						
Unit:4						
Unit:4		Contemporary Issues	2 hours			
Expert lectures, online seminars – webinars						
Total Lecture hours			45 hours

Fifth Semester

Course code	53A	Semester V: PLANT AND ANIMAL BIOTECHNOLOGY	L	T	P	C
Core	Core paper VII		4		-	4
Pre-requisite	Students should have the basic understanding of Plant and Animal products		Syllabus Version		2025-2026	
Course Objectives:						
The main objectives of this course are to:						
- Understood usage of Plant and Animal products and exploitation of them in Biotechnology. - Knowledge on Crop development and Callus culture - Biotechnological applications of plants, Animal tissue culture, Animal products, production & improvement of them.						
Expected Course Outcomes:						
On the successful completion of the course, student will be able to:						
1	Understand scientific and technical skills on plants and animal study					K1
2	Know about animal products					K1
3	Acquire knowledge on limitations and challenges in animal cell tissue culture.					K2
4	Know the applications of Plant and animal Biotechnology.					K3
5	Learn the preservative methods of cells					K4
6	Evaluate and discuss public and ethical concerns over the use of animal Biotechnology.					K4
K1 - Remember; K2 - Understand; K3 - Apply; K4 - Analyze; K5 - Evaluate; K6 – Create						
Unit:1	Cell and Tissue culture					12 hours
Introduction to cell and tissue culture, Plant tissue culture media (composition, types and preparation), plant hormones and growth regulators in tissue culture, Preparation of suitable explants for organogenesis. Micropropagation on large scale, somatic embryogenesis, protoplast culture and somatic hybridization, Anther, pollen and ovary culture for production of haploid plants.						
Unit:2	Cell culture methods					12 hours
Cell culture methods for the secondary metabolite production, somaclonal variation and its significance, Cryopreservation, Plant transformation techniques - Agrobacterium mediated gene transfer – Mechanism of DNA transfer, general features of TI and RI plasmids .						
Unit:3	Animal cell cultures					12 hours
Animal cell cultures: Culture media – composition and preparation, Balanced salt solution – and simple growth medium, Role of CO ₂ , serum and protein-free defined media and their applications; Culturing and maintenance of different animal cell lines (Primary and established cell lines). Characterization of cultured cell, measurement of viability, cyto – toxicity and growth parameters. Stem cell cultures, embryonic stem cell and their application, cell culture-based vaccines, apoptosis.						

Unit:4	Transgenic animals	12 hours
Transgenic animals: Method of obtaining transgenic animals using fertilized eggs and embryonic blastocyst cell, importance of transgenic animals – increased productivity of domestic animals, improved desired characters of domestic animals.		
Unit:5	Animal cloning	10 hours
Transgenic silkworms, Animal cloning: Methods of cloning in animal system – Rat, Sheep, Pig; importance of cloning – Gene therapy and cell mediated therapy. Ethical issues in Animal Biotechnology.		
Unit:6	Contemporary Issues	2 hours
Expert lectures, online seminars – webinars		
Total Lecture hours		60 hours
Text Book(s)

Course code	53B	IMMUNOLOGY	L	T	P	C
Core		CORE PAPER: VIII	4			4
Pre-requisite		Students should have studied about immune system in previous semester and school level	Syllabus Version		2025-2026	
Course Objectives:						
The main objectives of this course are to:						
• This course presents the basic defense mechanism of animals • To make the student to understood the concept immunology • On successful completion of the subject the student should have understood: Immunity, Antigen, Antibody, Cells of immune system and their function and regulations						
Expected Course Outcomes:						
On the successful completion of the course, student will be able to:						
1	Know about the history of Immunology					K1
2	Compare and contrast innate and adaptive immunity					K2
3	Design a model of Immunoglobulin/Antibodies					K6
4	Describe which cell types and organs present in the immune response.					K2
5	Illustrate various mechanisms that regulate immune responses and maintain tolerance					K3
6	Exemplify the adverse effect of immune system including Allergy, hypersensitivity and autoimmunity					K2
7	Apply basic techniques for identifying antigen antibody interactions					K3
8	Explain the stages of transplantation responses					K2
9	Describe the immunological response against tumor and blood transfusion					K2
K1 - Remember; K2 - Understand; K3 - Apply; K4 - Analyze; K5 - Evaluate; K6 – Create						
Unit:1 Basics of Immunology and Immune System 12 hours						
Introduction- Historical Development in Immunology. Immunity- Humoral and Cell mediated response, Primary and Secondary immune response. Cells involved in immune response. Innate and Acquired Immunity. Mechanisms of defense.						
Unit:2 Components of Immune Cells 12 hours						
Antigen- Types and classifications. Antibody – Structure, Types, properties and their biological functions, poly clonal sera, Monoclonal antibody. Primary and Secondary lymphoid organs – Thymus, Bone marrow, Lymph nodes and Spleen. Lymphocytes traffic and regulation. CD Molecules.						
Unit:3 Antigen and Antibody Process 10 hours						
Hematopoiesis and development of B and T lymphocytes. Immunoglobulin Gene expression B cell and T cell activation. MHC molecules Response of B cells to antigens. Plasma Cells, Memory Cells.						
Unit:4 Immunological Reaction and Disorder's 12 hours						
Complement – activation and regulation. Cytokines- structure and functions, Interferon and interleukins. Immuno regulation: Tolerance. Suppression, Autoimmunity and hypersensitivity reactions. Primary and secondary Immuno deficiency disorders.						

Unit:5	Antigen Antibody Reaction	12 hours
Transplantation, HLA Typing; Mechanism of Graft rejection. Tumor immunology. Immuno surveillance- mechanisms. Antigen – Antibody Interactions. Immunodiffusion and Immuno electrophoresis. Principle and Applications of RIA, ELISA, Fluorescent Antibody techniques.		
Unit:6	Contemporary Issues	2 hours
Expert lectures, online seminars – webinars		
Total Lecture hours		60 hours
Text Book(s)		
1	Immunology – Kuby., J - 5 th Edition	
Reference Books		
1	Immunology – Tizard	
2	Immunology – Ivan M. Roitt – Third Edition

Course code	53C	ENVIRONMENTAL BIOTECHNOLOGY	L	T	P	C
Core		CORE PAPER: IX	4		-	4
Pre-requisite		Students should have studied about environmental science in previous semester and school level	Syllabus Version		2025-2026	
Course Objectives:						
The main objectives of this course are to:						
- To reveal the current status and basics of environmental condition - To make the students to understand the concepts of ecology and conservation of environment - To provide knowledge of current perspectives in ecological issues						
Expected Course Outcomes:						
On the successful completion of the course, student will be able to:						
1	Classify microbes according to energy source and carbon source and evaluate energy outcome of the energy metabolism according to electron acceptor and electron donor usage					K1
2	Describe suitable methods for characterizing the activity, function, diversity, and composition of microbial communities					K2
3	Explain the microbial processes and growth requirements underlying the activated sludge process, nitrification, Denitrification, enhanced phosphorus removal, and anaerobic digestion					K1
4	Describe the most commonly applied disinfection methods, and the steps typically involved in drinking water treatment process train					K3
5	Evaluate the potential for biodegradation of organic pollutants, taking microbial and physical/chemical environments, as well as the chemical structure of the compound itself, into consideration					K5
6	Describe biotechnological solutions to address environmental issues including pollution, mineral resource winning, renewable energy and water recycling.					K4
7	Describe existing and emerging technologies that are important in the area of environmental biotechnology					K6
K1 - Remember; K2 - Understand; K3 - Apply; K4 - Analyze; K5 - Evaluate; K6 – Create						
Unit:1 Basics of Environmental components and Relationship 12 hours						
Scope – Branches of ecology – Abiotic factors – water – soil – temperature – light. Biotic factors – Animal relationship – symbiosis – commensalisms – mutualism –Antagonism – Antibiosis – Parasitism – Predation – competition.						
Unit:2 Ecosystem and Their Cycles 12 hours						
Ecosystem –Definition –structure – pond ecosystem –food chain – food web – trophic levels – energy flow – pyramid of biomass – pyramid of energy. Biogeochemical cycle: Nitrogen and Phosphorous.						
Unit:3 Types of Pollution and Threats 12 hours						
Pollution – types – sources – effects – Air-water – land – Noise – Green house effect, ozone depletion – Global warming – Acid rain– Bioaccumulation. Biological control.						

Unit:4	Biodiversity and Sewage Treatments	10 hours
Biodiversity –Types of Biodiversity, Hotspots, Values of Biodiversity. Sewage Treatment System – Characteristics, Primary, secondary and tertiary treatment. Environmental education.		
Unit:5	Disaster Management	12 hours
Disaster Management: Natural disaster, Earth quake, Bomb treat, Campus Shooting, Terrorist incidence, health emergency.		
Unit:6	Contemporary Issues	2 hours
Expert lectures, online seminars – webinars		
Total Lecture hours		60 hours

Course code	53D	RECOMBINANT DNA TECHNOLOGY	L	T	P	C
Core		CORE PAPER: X	4			4
Pre-requisite		A Basic knowledge on Genetics ,Tools and techniques of Molecular Biology	Syllabus Version		2025-2026	
Course Objectives:						
The main objectives of this course are to:						
1. To gain knowledge about the importance of gene manipulation and gene transfer technologies						
2. To learn the concept of vectors and expression systems and methods of selection						
3. To understand and describe the concept of Hybridization technique						
Expected Course Outcomes:						
On the successful completion of the course, student will be able to:						
1	Acquaint with the vocabulary involved in molecular cloning strategies and techniques used to probe DNA for specific genes of interest					K1
2	Apprehend with the tools and techniques in rDNA technology and types of Vectors					K2
3	Relate the role of restriction and modifying enzymes in recombinant DNA technology					K3
4	Explore the techniques involved in construction of genomic DNA library and cDNA library					K4
5	Design the protocols for analyzing gene transfer methods and to explore knowledge on hybridization based markers					K5
K1 - Remember; K2 - Understand; K3 - Apply; K4 - Analyze; K5 - Evaluate; K6 – Create						
Unit:1		Plasmid and its types			10 hours	
Plasmids –Types of Plasmids (F, R and Col), Properties Of Plasmid, Plasmid Compatibility, Copy Number Control. E.Coli Vectors- pBR322 And Their Derivatives, pUC Vectors And Their Derivatives, BAC. Cloning In Bacillus And Streptomyces.						
Unit:2		Vectors			12 hours	
Molecular Biology of Lambda and Lambda Vectors, Cosmid, Phagemid, M13. Yeast Vectors – YIP, YEP, YRP and YAC. Inducible Promoters, Selectable Markers And Expression Vectors.						
Unit:3		Restriction enzymes			12 hours	
Restriction and Modification Systems of Bacteria. Restriction Enzyme, DNA Polymerases, RNA Polymerase, Taq Polymerase, DNA Ligase, Methylase, Polynucleotide Kinase, Alkaline Phosphatase, Reverse Transcriptase, DNaseI, S1nuclease, RnaseH, Terminal Deoxynucleotidyl Transferase.						
Unit:4		Viral vectors			12 hours	
Animal Vectors- SV40 Vectors, Retero Viral and Baculo Viral Vectors, Shuttle Vectors. Plant Vectors - Ti Plasmid as Gene Vector, Caulimo Viruses, Gemini Viruses, Transposable Elements as Vectors Construction of cDNA and Genomic DNA Libraries.						
Unit:5		Probes and techniques			12 hours	
Probes - Probe Construction and Labelling. Introduction of Cloned Genes into Cell – Transformation, Transduction, Particle Bombardment, Liposome Mediation, Electroporation and Cocultivation. Identification of Recombinant DNA. Hybridization Techniques-Southern, Western and Northern Blotting, Chromosome Walking and Jumping. DNA Sequencing, Microarray. RFLP Maps, RAPD Markers, PCR, Antisense Technology, Terminator Gene Technology, DNA Finger Printing						

Unit:6	Contemporary Issues	2 hours
Expert lectures, online seminars – webinars		
	Total Lecture hours	60 hours
Text Book(s)		
1	Principles of gene manipulation and genomics. 2016 .S.B. Primrose and R.M. Twyman	
2	Gene Cloning and DNA Analysis: An Introduction .2010. Terry Brown	
Reference Books		
1	Genes to clones. Ernst. L. Winnacker, (2003), 2 nd edition, Panima publishing corporation, NewDelhi.

Course code	5ZC	DIAGNOSTIC TOOLS	L	T	P	C
Skill Based		Skill Based-Subject 3	3			3
Pre-requisite		Students should have learnt about physiology and pathology	Syllabus Version		2025-2026	
Course Objectives:						
The main objectives of the course is to : Make the students to understood the concept of diagnostic methods and to know examination of Blood , Urine and CSF						
Expected Course Outcomes:						
On the successful completion of the course, student will be able to:						
1	Compare and contrast the various blood and urine parameter analysis					K1
2	Understand the techniques to diagnose the abnormality in health					K2
3	Acquire a basic understanding about the components in blood to be checked					K2
4	Analyze the fundamental principles of advanced molecular techniques					K4
5	Evaluate the pros and cons of advanced techniques					K5
K1 - Remember; K2 - Understand; K3 - Apply; K4 - Analyze; K5 - Evaluate; K6 – Create						
Unit:1						
Blood parameters		15 hours				
Blood examination – anticoagulant, hemoglobin, RBC, Packed cell volume, ESR, WBC total, differential normal and abnormal hematopathies – anemia, bone marrow smear, leukemia and myelodysplastic syndromes, diagnostic significance of PB smear.						
Unit:2		Urine, CSF and Parasite analysis			14 hours	
Urine analysis – collection – physical, chemical and microscopic examination of urine – CSF, Parasite analysis						
Unit:3		Diagnostic Tools			14hours	
Biochemical analysis of Blood, Blood banking, Transplantation, AIDS, Lab safety, ELISA, RIA, FACS, PCR, Computers in lab.						
Unit:4		Contemporary Issues			2 hours	
Expert lectures, online seminars – webinars						
Total Lecture hours					45 hours	
Text Book(s)						
1	Handbook of medical lab technology – Ed; V.H.Talib					
2	Clinical Chemistry by Willium J.Marshall (Fifth edition					
3	An Illustrated color text of Clinical Biochemistry by Allen Gaw					
4	Marks’ Basic Medical Biochemistry: A Clinical Approach (2 nd Edition) by Colleen M. Smith, Allan D. Marks and Michael A. Lieberman.

Sixth Semester

Course code	63A	Semester VI: MICROBIAL BIOTECHNOLOGY	L	T	P	C
Core		CORE: XI	4		-	4
Pre-requisite		A basic knowledge in microbes and their benefits	Syllabus Version		2025-2026	
Course Objectives:						
The main objectives of this course are to:						
1. Understood the applications of Microbes						
2. Know about Fermentation, Microbial products, Vaccine and antibiotics.						
Expected Course Outcomes:						
On successful completion of the course, student will be able to:						
1	Narrate the scope and economics of Microbial Biotechnology					K1
2	Understand the need of microbial products for the mankind					K2
3	Examine the learned techniques in production of industrially important products					K3
4	Think about the innovativeness in the production of new beneficial metabolites					K6
5	Apply the IPR law to real problems and also learn patenting for creative products					K3 & K5
K1 - Remember; K2 - Understand; K3 - Apply; K4 - Analyze; K5 - Evaluate; K6 – Create						
Unit:1						
Microbial Biotechnology: Scope and application-horizons of microbial Technology, public concern about the microbial biotechnology and Economics of microbial biotechnology.						
Unit:2						
Microbes: Living factories for macromolecules-Production of proteins in Bacteria and yeast; recombinant and synthetic vaccines; microbial insecticides (<i>Bacillus thuringiensis</i> , <i>B.sphaericus</i> , <i>B.papilliae</i> and <i>Baculo</i> -Viruses); microbial enzymes application in starch processing , textile designing, detergents, cheese making; polysaccharides and polyesters.						
Unit:3						
Microorganisms in fermentation						
12 hours						
Microorganisms in fermentation-Ethanol from feed stocks to fermentable Sugars, from sugars to alcohols, clostridial fermentation, lactic acid fermentation, acetic acid production and industrial production of various milk products.						
Unit:4						
Metabolites from microorganisms						
12 hours						
Metabolites from microorganisms-amino acids; antibiotics-antibacterial agents (lactams, tetracyclines, peptides, amino glycosides), antifungal agents, anti-tumor antibodies.						
Unit:5						
Biofertilizers and IPR						
12 hours						
Production of biofertilizers (nitrogen fixing Bacteria, single cell protein, mycorrhiza and phosphate solubilizing Bacteria).Introduction to intellectual property and intellectual property rights (IPR) - types: patents, copy rights, trade marks, design rights and geographical indications.						

Unit:6	Contemporary Issues	2 hours

Course code	63P	LAB IN IMMUNOLOGY AND PLANT TISSUE CULTURE	L	T	P	C
Core		PRACTICAL III	-	-	4 in Sem 5 & 6 in sem 6	4
Pre-requisite		Students must know about basic knowledge in immune system in their previous semester and school level. Four hours laboratory each week for Odd semester six hours laboratory each week for even semester	Syllabus Version		2025-2026	
Course Objectives:						
The main objectives of this course are to:						
- To teach students the latest techniques and principles in Immunology and Plant Tissue Culture - To give hands on experience in immunological techniques and Plant Tissue Culture						
Expected Course Outcomes:						
On the successful completion of the course, student will be able to:						
1	Understand the practical skills in Immunology				K2	
2	Acquire skills in plant tissue culture				K2	
3	Defining the fundamental concepts of immunology, disease diagnosis and Plant tissue culture techniques				K3	
4	Developing and applying the recent technology involved in diagnostic techniques of immunology and Plant cell culture				K4	
5	Examining and analyzing the results involved in immune techniques and Plant tissue Culture				K5	
K1 - Remember; K2 - Understand; K3 - Apply; K4 - Analyze; K5 - Evaluate; K6 – Create						
Immunology			Hours			
Method of immunization and bleeding			2			
Preparation of Anti bodies			2			
Antigen-antibody reactions -Single radial Immuno diffusion			2			
Double Immuno diffusion			2			
Rocket Immuno diffusion			2			
Blood grouping			2			
Preparation of serum from blood			2			
WIDAL			2			
ASO			2			
CRP			2			
ELISA/Dot ELISA- Demonstration			2			
Total Hours			22			
Plant Tissue Culture			Hours			
Plant Tissue Culture Media Preparation			6			
In vitro germination o f seeds			6			
Callus induction and differentiation			2			
Embryo Culture			2			
Somatic embryogenesis			4			
Isolation and fusion of protoplast			6			

Artificial seed production	2
Meristem culture	2
Micropropagation	4
Qualitative analysis of alkaloids, flavonoids, saponins, tannins and phenolic Compounds	4

Core		PRACTICAL IV		-	3 in sem 5 & 6 in sem 6	4
Pre-requisite	Basic knowledge in tools and techniques of Cell Biology, Genetics and Biochemistry		Syllabus Version		2025-2026	
Course Objectives:						
The main objectives of the course is to facilitate: The Students to gain sound technical knowledge and hands on practical skills in various aspects of Microbial Biotechnology and rDNA Technology						
Expected Course Outcomes:						
On the successful completion of the course, student will be able to:						
1	Acquire an overview about the fundamentals of Bioprocess Technology and r-DNA technology tools and their application in agriculture, medicine and biodiversity conservation.				K1	
2	Acquire expertise in isolation of Plasmids and DNA and to validate the steps involved in isolation process				K2	
3	Gain confidence to apply the knowledge in pursuing bioprocess and DNA techniques at pilot scale for biotechnological application				K3	
4	Analyse, interpret gene amplification and identify copies to integrate transgene by PCR and Southern blot analysis.				K4	
5	Demonstrate the practical experience to begin a career in Biotech as well as well as in R and D research laboratories for advanced research.				K5	
K1 - Remember; K2 - Understand; K3 - Apply; K4 - Analyze; K5 - Evaluate; K6 – Create						
Experiments in Lab in Microbial Biotechnology and rDNA Technology			Hours			
1. Fermentor design and working principles – (Demo)			3			
2. Production and assay of extra cellular enzyme –protease submerged			3			
3. Wine Production			3			
4. Ethanol production and calculate the percentage of alcohol			3			
5. SCP – Production			3			
6. Isolation of genomic DNA – bacteria			5			
7. Isolation of genomic DNA – Plant			5			
8. Isolation of genomic DNA – Animal			5			
9. Agarose Gel Electrophoresis			5			
10. Isolation of Plasmid DNA			5			
11. Restriction digestion			5			
12. Ligation			3			
13. Transformation			5			
14. SDS-PAGE			5			
15. Western blotting – Demo			5			

16. Southern blotting – Demo	5
17. PCR – Demo	4

Skill Based		Skill Based-Subject 4	3			3
Pre-requisite		Students must know about basic knowledge about immunology/basic science in their previous semester and school level	Syllabus Version		2025-2026	
Course Objectives:						
The main objectives of this course are to:						
- To make the student to understood the concept therapy. - This Pharmacology is the study of inherited variation in drug response. - To understand the basic steps in the drug research, toxicological, pre-clinical and clinical studies						
Expected Course Outcomes:						
On the successful completion of the course, student will be able to:						
1	Compare and contrast the specific pharmacology of the major classes of drugs, important distinctions among members of each class					K1
2	Understand the medicinal and pharmaceutical importance of drug compounds					K2
3	Students acquire a basic understanding about the drug research.					K2
4	Analyze the fundamental principles of pharmacokinetics and pharmacodynamics.					K4
5	Evaluate the risks and benefits, in relation to the organ systems they affect, and the diseases for which they are used therapeutically.					K5
K1 - Remember; K2 - Understand; K3 - Apply; K4 - Analyze; K5 - Evaluate; K6 – Create						
Unit:1						
Basics of Pharmacology		15 hours				
Pharmacology – origin of pharmacology – Pharmacology in the 20th century – Drugs – Sources of drug , dosage forms and routes of administration. D rug absorption and Distribution.						
Unit:2						
Mode of Drug Reaction in Immune system and Immuno-Assay		14 hours				
Principles of basic Pharmacokinetics, drug intolerance, drug allergy, tachyphylaxis, drug abuse, vaccination against infection, factors modifying drug action and effect.						
Unit:3						
Mechanisms and Antimicrobial Drugs Against Various Diseases		14 hours				
Respiratory systems – cough, bronchial asthma, pulmonary tuberculosis Cancer chemotherapy.. Thyroid and anti thyroid , drugs, insulin and anti diabetic drugs, anti fertility and ovulation inducing drugs.						

Unit:4	Contemporary Issues	2 hours
Expert lectures, online seminars – webinars		
Total Lecture hours		45 hours

Elective Papers

Course code	5EA	AGRICULTURAL BIOTECHNOLOGY	L	T	P	C
Elective		ELECTIVE - I (A)	4			4
Pre-requisite		Students should have studied about basic science school level.	Syllabus Version		2025-2026	
Course Objectives:						
The main objective of the course is to						
- understand the relationship between society and science and the justification for biotechnological manipulation of plants, animals, and microorganisms. - acquire knowledge about the range of approaches to manipulate and improve plants, animals and microorganisms.						
Expected Course Outcomes:						
On the successful completion of the course, student will be able to:						
1	Explain the growth and historical perspective of agricultural biotechnology.					K1
2	The students will be provided with a firm understanding in the principles and application of agriculture biotechnology.					K2
3	Understand the importance of biofertilizers					K2
4	Analyse the current practices and production of biofertilizers.					K4
5	Create new practices in production of biofertilizers.					K6
K1 - Remember; K2 - Understand; K3 - Apply; K4 - Analyze; K5 - Evaluate; K6 – Create						
Unit:1						
		AGRICULTURE BIOTECHNOLOGY RISKS AND APPLICATIONS	20 hours			
Biotechnology in agriculture, growth and historical perspective of agricultural biotechnology. Agriculture biotechnology – Risks and applications. Transgenic plants resistance to biotic and abiotic stress. transgenic plants in crop improvement. Advantages and applications of transgenic plants.						
Unit:2						
		TRANSGENIC PLANTS	20 hours			
Transgenic plants in quality modifications – Starch, Oil, Protein, Golden Rice, Suppression of endogenous gene, Male sterilization. Plants derived vaccines, flower modification and colour.Targetting transgenic product to chloroplast and mitochondria.						
Unit:3						
		BIOFERTILIZERS IMPORTANCE	18 hours			
Importance of Biofertilizers in agriculture (Rhizobium,Azotobacter, Mycorrhiza, Actinorhiza) advantages and current status,vermiculture, composting, current practices and production of biofertilizers.						
Unit:4						
		Contemporary Issues	2 hours			
Expert lectures, online seminars – webinars						
Total Lecture hours					60 hours	
Reference Books

Course code	5EB	BIOREMEDIATION	L	T	P	C
Elective		ELECTIVE - I (B)	4			4
Pre-requisite		This course is open to students having background in Science at school level and previous semesters.	Syllabus Version		2025-2026	
Course Objectives:						
Demonstrate an understanding of the nature and importance of bioremediation. Understand the influence of contaminant characteristics to bioremediation.						
Expected Course Outcomes:						
On the successful completion of the course, student will be able to:						
1	Explain the definition of bioremediation.					K1
2	To Understand the bioreactors for remedial processes.					K2
3	To describe the various phytoremediation processes.					K2
4	To Create biotechniques for air pollution.					K6
5	To Analyze Biodegradation of xenobiotics.					K4
K1 - Remember; K2 - Understand; K3 - Apply; K4 - Analyze; K5 - Evaluate; K6 – Create						
Unit:1						
BIOREMEDIATION			20 hours			
Bioremediation: Definition - constraints and priorities of bioremediation. Bioaugmentation; bioreactors for remedial processes, types of bioremediation- in situ & ex situ. Bioremediation of heavy metals: Microorganisms for ore concentration and leaching. Reclamation of mine sweepings - Biosorption and bioleaching. Heavy metal elimination from sewage water and effluents – Biotechnological approaches.						
Unit:2						
PHYTOREMEDIATION			20 hours			
Phytoremediation –Definition, various phytoremediation processes, example of phytoextraction from soil, hyper accumulators and biotic interaction. Mycoremediation: Definition, Rhizofiltration, Mycorrhizal associations, Mycofiltration.						
Unit:3						
XENOBIOTIC COMPOUNDS			18 hours			
Xenobiotic compounds: Recalcitrance – hazardous wastes – disposal of radioactive wastes. Biodegradation of xenobiotics - Biological detoxification; Biodegradation of DDT, BHC and malathion in soil, plants and insects. Biotechnological methods for hazardous waste management. Biotechniques for air pollution abatement and odor control: Deodorization process, application.						
Unit:4						
Contemporary Issues			2 hours			
Expert lectures, online seminars – webinars						
Total Lecture hours			60 hours

Course code	5EC	INTRODUCTION TO BIOINFORMATICS	L	T	P	C
Elective		ELECTIVE – I (C)	4			4
Pre-requisite		Students must have basic knowledge on computer and biomolecules.	Syllabus Version		2025-2026	
Course Objectives:						
The main objectives of this course are :						
• To teach about organizing vast reams of Molecular Biology data in an efficient manner • To make understand the tools development that aid in maintaining molecular data						
Expected Course Outcomes:						
On the successful completion of the course, student will be able to:						
1	Demonstrate the concepts in computational Biology					K1
2	Understand the interrelationship between Biology, Computer and mathematics					K2
3	Apply the knowledge on existing software effectively to extract information from large databases and to use those information in computer modeling					K3
4	Analyze the molecular data using insilico tools					K4
5	Think critically and get motivated to do higher studies to develop evaluation skills in bioinformatics					K5
K1 - Remember; K2 - Understand; K3 - Apply; K4 - Analyze; K5 - Evaluate; K6 – Create						
Unit:1 Introduction to Bioinformatics 20 hours						
Introduction and history of bioinformatics – Internet, World Wide Web, Web browser, EMB net, NCBI. File transfer protocol. Database browsers and search engines. Introduction to MS access, making queries, Designing forms and Report design						
Unit:2 Databases 20 hours						
Database- Definition, DBMS, Biological Databases – FASTA, Blast, Genbank, DNA sequence databases, Protein databases. Entry formats, carbohydrate databases, Enzyme databases, Pathway databases. Relational database model. Theory on RDBMS. SQL.						
Unit:3 Application of Bioinformatics 18 hours						
Application aspects – gene prediction, target searching – drug designing – E- cell, phylogenetic analysis, PERL, Chemoinformatics.						
Unit:4 Contemporary Issues 2 hours						
Expert lectures, online seminars – webinars						
Total Lecture hours						60 hours
Text Book(s)

Course code	6EA	MEDICAL BIOTECHNOLOGY	L	T	P	C
Elective		ELECTIVE - II (A)	4		-	2
Pre-requisite		Students must know about basic knowledge about Medical Biotechnology /basic science in their previous semester and school level.	Syllabus Version		2025-2026	
Course Objectives:						
• Deep understanding of advantages and hazards of microbial world. Advanced knowledge for growth and control micro organisms for wealth production. • To give students a solid foundation in biology and chemistry. • To develop analytical and critical thinking skills in biological phenomena through scientific methods.						
Expected Course Outcomes:						
On the successful completion of the course, student will be able to:						
1	To remember the role of biotechnology in healthcare.					K1
2	To understand the worldwide market and work in medical biotechnology.					K2
3	To describe the pharming for human proteins and nutraceuticals.					K2
4	To analyze the diagnosis and prediction of disorders.					K4
5	Evaluate the recent developments in medical biotechnology.					K5
K1 - Remember; K2 - Understand; K3 - Apply; K4 - Analyze; K5 - Evaluate; K6 – Create						
Unit:1		MEDICAL BIOTECHNOLOGY TOOLS	20 hours			
Tools of Medical Biotechnology – Biotechnological revolutions- Genomics, combinatorial chemistry, insight into basic biology-Areas of application, Diagnosis and prediction of disorders, Limits and approaches.						
Unit:2		MEDICAL BIOTECHNOLOGY ROLE	20 hours			
Role of biotechnology in healthcare. Worldwide market and work in medical biotechnology. Vaccine Production-New developments. Biosensors in clinical diagnosis, chiral technology, monoclonal antibodies for immunotherapy.						
Unit:3		MEDICAL BIOTECHNOLOGY APPLICATION	18 hours			
Recent developments in medical biotechnology –Pharming for human proteins and nutraceuticals. Tissue engineering and therapeutic cloning, Application of nanotechnology in biomedical sciences- Green anaosubstances, gene delivery, drug delivery. Nanotechnology in replacing defective cells.						
Unit:4		Contemporary Issues	2 hours			
Expert lectures, online seminars – webinars						
Total Lecture hours					60 hours	
Reference Books						
1	Fundamentals of medical biotechnology by Aparna Rajagopalan, Ukaaz publications.					
2	Medical biotechnology by S.N.Jogdand, Himalaya publications.					
3	Medical Microbiology- Mackie and Mc Cartney

Course code	6EB	BIOTECHNOLOGICAL APPROACH FOR WASTE WATER TREATMENT	L	T	P	C
Elective		Elective II (B)	4			2
Pre-requisite		Students must know about basic knowledge about waste water /basic science in their previous semester and school level	Syllabus Version		2025-2026	
Course Objectives:						
Students will gain knowledge on waste water treatment and its procedure.						
Expected Course Outcomes:						
On the successful completion of the course, student will be able to:						
1	Acquire skills on handling domestic and industrial waste water					K1
2	Understand the different levels of waste water treatment					K2
3	Become employable in ETP lab and pollution control board					K3
4	Analyze the parameters before and after treating waste water					K3
5	Apply knowledge in designing effluent treatment plant for the dyeing industries					K4, K6
K1 - Remember; K2 - Understand; K3 - Apply; K4 - Analyze; K5 - Evaluate; K6 – Create						
Unit:1		Introduction to waste water treatment			20 hours	
Historical introduction to water and waste water environment. Domestic and industrial waste water flow rate and characteristics. Design of waste water network, waste water treatment process. Waste water pretreatment – screenings, grit channels, filtration and equalization, primary treatment-chemically enhanced primary sedimentation, sludge quantity from primary settlings.						
Unit:2		Wastewater Treatment			20 hours	
Secondary Treatment – Biological treatment of waste water, secondary treatment systems, filtration, sludge settlement parameters. Nitrification and denitrification. Activated sludge systems – Complete mix, plug flow reactors, attached growth systems. Nutrient removal – Biological nutrient removal. Nitrification combined biological phosphorus and nitrogen removal.						
Unit:3		Wastewater Process			18 hours	
Secondary classification, advanced treatment process – Granular media filtration, Absorption, Chemical treatment, Air stripping and ammonia removal. Waste water disinfectant. Diffuses from waste water – plume flow, design. Treatment of waste water in Food processing, Paper, Sugar and Leather industry.						
Unit : 4				2 hours		
Expert lectures, online seminars – webinars						
Total Lecture hours				60 hours		
Text Book(s)						
1	Text book of environmental biotechnology by Pradeep Kumar Mohapatra.					
2	Environmental Biotechnology by Alan.Scragg.					
3	Industry Microbiology by Patel.					
Reference Books						
1	Environmental Engineering by Gernardhily.					
2	Biotechnology fundamentals and application by S.S.Purohit					
3	Waste Water Engineering Treatment and Disposal and Reuse by Metcalf and Eddy.

Course code	6EC	GENOMICS	L	T	P	C
Elective		ELECTIVE – II (C)	4		-	2
Pre-requisite		Students must have basic knowledge on Biological databases	Syllabus Version		2025-2026	
Course Objectives:						
The main objectives of this course are to: - Understand the genome organization, function and comparative study with other organisms - Acquire knowledge on genome sequencing and mutation study						
Expected Course Outcomes:						
On the successful completion of the course, student will be able to:						
1	Gain information on next generation sequencing tools and next generation mapping portals					K1
2	Understand the stages of genes expression, genome projects and genomic databases					K2
3	Acquire skills in managing and processing Omics data					K3
4	Obtain and analyse information and data relating to genes using specific organism databases					K4
5	Validate appropriate knowledge and skills in the area of Biological sciences					K5
K1 - Remember; K2 - Understand; K3 - Apply; K4 - Analyze; K5 - Evaluate; K6 – Create						
Unit:1		Introduction to genome databases			20 hours	
Introduction to genome databases - database search - Algorithms issues in databases search - sequence database search - FASTA - BLAST – Types of genomic databases and uses: Polymorphic markers, Cytogenic Maps, LINE, SINE- Amino acid substitution matrices PAM and BLOSUM.						
Unit:2		Gene therapy, gene expression and Sequencing			20 hours	
Gene Therapy: Concept and Principles of Gene Therapy. Principles of gene Expression - Genome Mapping –physical and genetic mapping techniques, Human Genome Project - Genomes of other organisms. Shotgun DNA sequencing - Sequence assembly - Gene predictions - Molecular prediction with DNA strings.						
Unit:3		Genome analyzing Tools			18 hours	
Genomic resources, Gene structure and DNA sequences. EST comparison, gene hunting. Expression analysis- SAGE, cDNA library, ORF prediction, Microarray – DNA sequencing and sequence alignment: RFLP, SNP, RAPD, Application of Comparative Genomics.						
Unit:4		Contemporary Issues			2 hours	
Expert lectures, online seminars – webinars						
Total Lecture hours					60 hours	
Text Book(s)						
1	Introduction to bioinformatics by Dr. Mani and Dr. Vijayaraj.					
2	Bioinformatics by Parry and Smith.

Course code	6ED	INDUSTRIAL BIOTECHNOLOGY	L	T	P	C
Elective		ELECTIVE - III (A)	4		-	2
Pre-requisite		This course is open to students having background in Science at school level and previous semesters.	Syllabus Version		2025-2026	
Course Objectives:						
The main objectives of this course are:						
To make the students learn about the fermentation, fermentor and production fermented foods						
Expected Course Outcomes:						
On the successful completion of the course, student will be able to:						
1	Increase their understanding that industrial biotechnology is based on using machines to control the growth of microorganisms					K2
2	Acquire basic theoretical skills on operating fermentor under various parameters					K3
3	Exemplify the production of alcoholic beverages and organic acids					K3
4	Analyze the potential business opportunities in fermentation-based biotechnology					K4
5	Become innovative in search of new microbes for microbial product production					K6
K1 - Remember; K2 - Understand; K3 - Apply; K4 - Analyze; K5 - Evaluate; K6 – Create						
Unit:1		Fermenter			20 hours	
Fermenter- batch and continuous fermenter, general design of a stirred tank fermenter, sterilization and maintenance of sterile conditions, preparation of inoculum. Types of fermentation- solid state fermentation- tray and drum, and submerged fermentation- batch and fed batch Media used for industrial fermentation.						
Unit:2		Microbial production and product recovery			20 hours	
Microbial production and product recovery - Alcoholic beverage- wine and beer Production of vinegar from alcohol, production of vitamin-B 12, production of organic acid- lactic acid and glutamate.						
Unit:3		Fermented dairy products			18 hours	
Fermented dairy products- microorganisms involved in fermentation, yogurt, curds, sour cream, cheese paneer, pickles, idly, single cell protein.						
Unit:4		Contemporary Issues			2 hours	
Expert lectures, online seminars – webinars						
Total Lecture hours					60 hours

Course code	6EE	BIOETHICS & BIOSAFETY	L	T	P	C
Elective III		Elective III (B)	4		-	2
Pre-requisite		This course is open to students having background in Science at school level and previous semesters.	Syllabus Version		2025-2026	
Course Objectives:						
The main objectives of this course are to:						
• The course has been designed to sensitize students about the significance of biotechnological products and awareness of genetically engineered organisms • To know the general biosafety rules and different biosafety levels. • The course further aims to make students aware about the ethical issues involving biological material.						
Expected Course Outcomes:						
On the successful completion of the course, student will be able to:						
1	Distinguish knowledge of biosafety and risk assessment of products derived from recombinant DNA research and environment release of genetically modified organisms, national and international regulations.					K1
2	Analyze ethical aspects related to biological, biomedical, health care and biotechnology research					K4
3	Awareness education on genetically engineered organism					K2
4	Evaluate the levels and their impact on Environment					K5
5	Understand the Ethics in clinical trials and Good Clinical Practices					K2
K1 - Remember; K2 - Understand; K3 - Apply; K4 - Analyze; K5 - Evaluate; K6 – Create						
Unit:1 Basics of Ethics in Biotechnology 20 hours						
Definition of ethics and Bioethics, Ethics in Biotechnology-positive and negative effects with classical examples – Rice with Vitamin A, No-till Agriculture, cotton without insecticide, reduced need for fertilizer, biological pest control, slow ripening fruits and controlled ripening, fast growing trees and fishes. Awareness education on genetically engineered organism. Transgenic instability, gene flow, resistance/ tolerance of target organism, increase weedlessness, risks and uncertainty associated with Biotechnology.						
Unit:2 Impact of Environmental Containments and GLP 20 hours						
Containment levels and their impact on Environment- Containment- definition, types of containment, summary of recommended Biosafety levels for infectious agents, detail checklist – premises and lab equipment, Animal facilities, environment. Gene technology laboratory. GLP and Bioethics- introduction, national Good Laboratory Practices (GLP), the GLP authority functions, Good Laboratory Practices- necessity, aspiration and responsibility.						
Unit:3 Ethics In Clinical Trials and Good Clinical Practices in Biotechnology 18 hours						
Ethics in clinical trials and Good Clinical Practices (GCP) – Definition of clinical trials and GCP, general information about clinical trials, need to conduct clinical trials, faces of clinical trials, institutional set ups for conducting clinical trials, ethics in clinical Biotechnology.

Course code	6EF	PROTEOMICS	L	T	P	C
Elective		ELECTIVE – III (C)	4			2
Pre-requisite		Students must have basic knowledge on protein databases	Syllabus Version		2025-2026	
Course Objectives:						
The main objectives of this course are to:						
- Understand the protein databases and interactions - Gain knowledge on qualitative and quantitative proteomics						
Expected Course Outcomes:						
On the successful completion of the course, student will be able to:						
1	Acquire skills on protein databases and their retrieval					K1
2	Able to interpret the protein interactions					K3
3	Identify and investigate the structure of protein					K4
4	Know the Evaluation of mass of the protein					K5
5	Develop analytical skills in identifying new proteins thereby interpreting with databases					K6
K1 - Remember; K2 - Understand; K3 - Apply; K4 - Analyze; K5 - Evaluate; K6 – Create						
Unit:1		Protein databases	20 hours			
Protein databases: CATH, SCOP, FSSP, SARF, MMDB. Protein structure and comparison, Blocks, Class, Domain, Fold, Profile, Motif and PSSM.						
Unit:2		Structural Proteomics	20 hours			
Structural Proteomics: Experimental Techniques for Protein Structure Elucidation, X-ray Crystallography, 2-D Electrophoresis- Sample preparation, pH gradient- MALDI-TOF, Electrophoretogram, Protein Microarray and Bioseparation.						
Unit:3		Metabolomics	18 hours			
Metabolomics: Understanding the Metabolic Pathways of Microbes, metabolic pathway databases-KEGG. Structure prediction, active site determination, neural networks. Protein – protein interaction, protein – DNA interaction. Enzyme – Substrate interaction. Applications of Proteomics: Plant breeding and Biomedical.						
Unit:4		Contemporary Issues	2 hours			
Expert lectures, online seminars – webinars						
			Total Lecture hours		60 hours

Annexure

BHARATHIAR UNIVERSITY, COIMBATORE- 641046
DEPARTMENT OF BIOTECHNOLOGY

VISION

To proffer outcome-based education in terms of developing eminent skills and intellectuals with highly competent in fundamental and applied aspects of biology and nourish confidence to become employable and survival in the society.

MISSION

Contribute quality teaching and learning by modern pedagogy with enhancements in practical and entrepreneurial skills enabling the students on empowered knowledge to meet global standard in biotechnology and to encounter the current and future requirements of biotechnological industries.

		Value added courses/ Job oriented Certificate courses	Optional
		UGC-SWAYAM online /MOOC's courses	Optional

Note : Subject code to be cross verified especially for allied Maths and Computer Courses

@ No University Examinations. Only Continuous Internal Assessment (CIA) #

No Continuous Internal Assessment (CIA). Only University Examinations.

List of Elective papers* (Colleges can choose any one of the paper as elective)		
Elective – I	A	Agricultural Biotechnology
	B	Bioremediation
	C	Introduction to Bioinformatics
Elective – II	A	Medical Biotechnology
	B	Biotechnological approach for waste water treatment
	C	Genomics
Elective – III	A	Industrial Biotechnology
	B	Bioethics & Biosafety
	C	Proteomics

*Elective papers as listed above or any other new elective can be added based on the need, which can be approved by the University authorities.

B.Sc., Biotechnology
Question paper format to be followed for core Practical Examination

Total Marks: 50

**No. of Hrs: 3 hrs for Practical I & II &
6 hrs for Practical III & IV**

I Major A	20 Marks
II Minor B	10 Marks
III Identify the spotters D,E,F,G & H and comment on it (Identification: 1 mark and description: 1 mark)	5*2= 10 Marks
IV Viva	5 Marks
V Record	5 Marks

Note: 2 set or 2 lots of question papers are preferable for minimum of 15 students / batch
