

B.Sc. Data Science

Syllabus

AFFILIATED COLLEGES

Programme Code:28M

2026 – 2027 onwards

BHARATHIAR UNIVERSITY

**(A State University, Accredited with “A++” Grade by NAAC,
Ranked 21st among Indian Universities by MHRD-NIRF)**

Coimbatore - 641 046, Tamil Nadu, India

B.Sc. Data Science Curriculum & Syllabus

Programme Educational Objectives (PEOs)

The B.Sc. Data Science program describe accomplishments that graduates are expected to attain within five to seven years after graduation.

PEO1	Our graduates will excel with professional skills, fundamental knowledge, and advanced futuristic technologies to become Data Scientists, Data Analyst, AI Research Scientists, or Entrepreneurs
PEO2	Our graduates will establish their knowledge by adopting Data Science Technologies to solve complex real-world problems with accurate, thoughtful solutions
PEO3	Our graduates will engage in lifelong learning to excel in their profession with social and ethical awareness and responsibility

Programme Specific Outcomes (PSOs)	
After the successful completion of B.Sc. Data Science programme the students are expected to	
PSO1	Ability to design, develop, implement and apply Analytical skills related to Research and Real-world problems
PSO2	Ability to apply tools and techniques to provide successful solutions in the multidisciplinary field
PSO3	Ability to critique the role of information and analytics for a innovative career, research activities and consultancy

Programme Outcomes (POs)	
On successful completion of the B.Sc. Data Science	
PO1	Apply analytical and critical thinking to identify, formulate, analyze, and solve Complex real-world problems in order to reach nuanced authenticated conclusions
PO2	Possess the ability to demonstrate advanced independent critical enquiry, analysis and reflection of modern statistical methodology and computing
PO3	Have a set of flexible and transferable skills for different types of employment, both within the Information Technology sector and beyond, in both global and local organizations
PO4	Develop and implement data analysis strategies base on theoretical principles, ethical considerations, and deep, detailed and broad knowledge of the underlying data and its implications in the context from which the data was taken
PO5	Be critical and creative thinkers, with an aptitude and appreciation for continued self-directed learning in the evolving world of data science, artificial intelligence and social media
PO6	Design and develop research-based solutions for complex problems with specified needs with appropriate ethical consideration for public health, safety, culture, society, and the environment.
PO7	Establish the ability to listen, read, proficiently communicate and articulate nuanced data and information through traditional and digital channels to audiences with diverse perspectives
PO8	Articulate and evaluate appropriate legal and ethical standards pertaining to all forms of communications, network security and human rights.
PO9	Showcase an understanding of the interdisciplinary nature of data, information and community and its influence innovation and progress within the current local or global context
PO10	Be able to initiate and implement constructive change in their communities with their skills in data and information, including various professions and workplaces

BHARATHIAR UNIVERSITY, COIMBATORE-641 046**(For the students admitted from the academic year 2025-2026 onwards)****B.Sc. Data Science (CBCS pattern)****SCHEME OF EXAMINATIONS**

Part	Study Components	Course Title	Ins. hrs / week(Theory)	Examinations				Credits
				Dur.Hrs.	CIA	End Sem Exam	Total	
	SEMESTER-I							
I	Language-I		6	3	25	75	100	4

No Continuous Internal Assessment (CIA). Only University Examinations. @ No University Examinations. Only Continuous Internal Assessment (CIA).

➤ #Govt – Non-Autonomous Colleges, \$ Aided – Non-Autonomous Colleges, @ Self - Financing Colleges (Non –Autonomous) (For theory : CIA – 12, CEE – 38; For Practical : CIA – 20, CEE – 30).

List of Elective Papers (Colleges can choose any one of the paper as electives)		
Elective – I	A	Marketing Analytics
	B	Data Security and Compliance
	C	Computer Vision
Elective – II	A	Supply Chain and Logistics Analytics
	B	Business and Financial Analytics
	C	Recommender system
Elective - III	A	HR Analytics
	B	Data Mining
	C	Big Data and Cloud Computing

GUIDELINES FOR EVALUATION

Govt. - (Non-Autonomous Colleges), \$ Aided – (Non-Autonomous Colleges), @ Self-Financing (Non –Autonomous).
Evaluation of the candidates shall be made through internal and. external marks

Paper Type	Total Marks	Internal		External		Overall Passing Minimum for Total Marks (Internal +External)
		Maximum Marks	Passing Minimum for Internal	Maximum Marks	Passing Minimum for External	
Part III: Core/ Allied Theory	100	25	10	75	30	40
Part III: Core Practical Lab	50	20	8	30	12	20
Part III: Capstone Project Work Lab	50	20	8	30	12	20
Part III: Project Work Lab	100	25	10	75	30	40
Part IV: Skilled Based Subject Theory	50	25	10	25	10	20
Part IV: Skill Based Subject Lab	50	20	8	30	12	20
Part IV: Foundation Course Theory	50	-	-	50	20	20
Part IV: Health and Wellness	100	100	40	-	-	40

INTERNAL MARKS BREAK UP

Core, Allied and Skilled Based Subject -Theory

Components	CIA I	CIA II	Model	Attendance	Assignment & Seminar	Total
Marks	5	5	10	2	3	25

Core Lab & Skill Based Subject Lab – Practical

Components	Observation	Record	Model Practical	Total
Program(s)	5	5	10	20

Project

Components	Topic Selection	First and Second Review	Mock Viva Presentation	Report	Total
Capstone Project Work Lab	5	5	5	5	20
Project Work Lab	5	10	5	5	25

Internal Examination Question Paper Pattern

Core, Allied and Skilled Based Subject -Theory

Duration: 2 Hours

Blooms Classification	Knowledge Level	Section	Type	No. of Questions to be answered	Marks
Remember, Understand	K1,K2	A	Objective type, questions, fill in the blanks, true or false, expand the following	All questions	4 X 1 = 4
Understand, Apply	K2,K3	B	Paragraph about 3 pages	All question either or pattern unit wise	5 X 2 = 10
Apply, Analyze	K3,K4	C	Essay type about 5 pages	2 out of 5 questions	2 X 8 = 16
Total					30

UNIVERSITY EXTERNAL MARKS BREAK UP

Core Lab & Skill Based Subject Lab – Practical

Components	Max. Marks	Aim & Algorithm	Typing	Output	Record	Total	Passing Minimum External
Program 1	10	4	4	2	10	30	12
Program 2	10	4	4	2			

Project

Components	Report	Presentation	Viva-voce	Total	Passing Minimum External
Capstone Project Work Lab	15	10	5	30	12
Project Work Lab	40	20	15	75	40

University Examination Question Paper Pattern

Core Paper & Allied Paper (Theory) Duration: 3 Hours

Blooms Classification	Knowledge Level	Section	Type	No. of Questions to be answered	Marks
Remember, Understand	K1,K2	A	Objective type questions, fill in the blanks, true or false, expand the following	All questions	10 X 1 = 10
Understand, Apply	K2,K3	B	Paragraph about 3 pages	Either or Pattern (Unit Wise)	5 X 5 = 25
Apply, Analyze	K3,K4	C	Essay type about 5 pages	Either or Pattern (Unit Wise)	5 X 8 = 40
Total					75

Skill Based Subject Paper (Theory) Duration: 3 Hours

Blooms Classification	Knowledge Level	Section	Type	No. of Questions to be answered	Marks
Remember, Understand	K1,K2	A	Objective type questions	All questions	6 X 1 = 6
Understand, Apply	K2,K3	B	Paragraph about 2 pages	Either or Pattern (Unit Wise)	3 X 3 = 9
Apply, Analyze	K3,K4	C	Essay type about 4 pages	2 out of 5 questions (Unit Wise)	2 X 5 = 10
Total					25

Foundation Course Paper (Theory) Duration: 3 Hours

Section	Type	No. of Questions to be answered	Marks
A	Essay type about 5 pages	5 out of 10 questions	5 X 10 = 50
Total			50

Note

*	No Continuous Internal Assessment (CIA), University Examinations Only.
**	No University Examinations, Continuous Internal Assessment (CIA) Only.
***	Naan Mudhalvan – Skill courses- external marks (CEE) will be assessed by Industry and internal will be offered by respective course teacher.
****	No University Examinations, Continuous Internal Assessment (CIA) Only will be handled by Department of Physical Education (PD)
*****	Summer Internship / Industrial Training during the Summer Vacation in II Year, IV Semester for 30 hours. The capstone project report to be prepared and it should be submitted during viva-voce. (Refer Project Guidelines)

***First
Semester***

Course Code	Computer Fundamentals and Python Programming		L	T	P	C
Core/Elective/ Supportive	Core 1		5	-	-	4
Pre-requisite	Logical Thinking and Problem Solving Skills	Syllabus Version	2025 – 26 onwards			
Course Objectives:						
The main objectives of this course are to:						
1. Understand about number systems, algorithms and OOP concepts.						
2. Understand the basic Python programming constructs and data structures						
3. Understand how to use files, modules and packages						
Expected Course Outcomes:						
On the successful completion of the course, student will be able:						
1.	Apply number systems and OOPs concepts for algorithmic problem solving				K2, K3	
2.	Develop simple Python programs in interactive and script mode using control statements				K2, K3	
3.	Construct Python programs using functions and strings.				K3	
4.	Make use of Python lists ,set, tuples, dictionaries to represent compound data.				K3,K4	
5.	Develop python programs to handle exceptions, packages and perform file processing				K3,K4	
K1 - Remember; K2 - Understand; K3 - Apply; K4 - Analyze; K5 - Evaluate; K6– Create						
UNIT:1	COMPUTER FUNDAMENTALS, ALGORITHMIC PROBLEM SOLVING AND OOP CONCEPTS				10 Hours	
	Introduction to number systems- Algorithms, building blocks of algorithms (statements, control flow, functions), pseudo code, flow chart, algorithmic problem solving, simple strategies for developing algorithms (iteration, recursion). OOP concepts: Overview of Object oriented programming approach, Characteristics of object oriented languages-Classes fundamentals: A Simple Class and Object, Accessing members of class, Initialization of class objects:(Constructor, Destructor).					
UNIT:2	BASICS OF PYTHON PROGRAMMING				9 Hours	
	Introduction-Python interpreter- interactive and script mode; values and types, operators, expressions, statements, precedence of operators, Multiple assignments, comments.					
UNIT:3	CONTROL STATEMENTS AND FUNCTIONS IN PYTHON				9 Hours	
	Conditional (if), alternative (if-else), chained conditional (if-elif-else); Iteration: state, while, for, break, continue, pass; Functions: Introduction, inbuilt functions, user defined functions, passing parameters, return values, recursion.					
UNIT:4	DATA STRUCTURES: STRINGS ,LISTS, SETS				10 Hours	
	Strings: string slices, immutability, string methods and operations; Lists: creating lists, list operations, list methods, mutability, aliasing, cloning lists, list and strings, list and functions; list processing: list comprehension, searching and sorting, Sets: creating sets, set operations					

UNIT:5	DATA STRUCTURES: TUPLES, DICTIONARIES	10 Hours
	Tuples: Tuple assignment, Operations on Tuples, lists and tuples, Tuple as return value; Dictionaries: operations and methods, Nested Dictionaries. Files and exception: text files, reading and writing files, format operator, exception handling, modules, packages	
	Total Lecture hours	48 hours

Course Code	Database Management System with SQL	L	T	P	C
Core/Elective/ Supportive	Core 2	5	-	-	4
Pre-requisite	Basic Computer Fundamentals	Syllabus Version	2025 – 26 onwards		
Course Objectives:					
The main objectives of this course are to:					
1. Understand the significance and fundamentals of database management systems.					
2. Understand the Database design and query optimization techniques.					
3. Understand the database security concepts					
Expected Course Outcomes:					
On the successful completion of the course, student will be able:					
1.	Describe the fundamental elements of relational database management systems			K1, K2	
2.	Design relational schema using database design principles			K2, K3	
3.	Explain the concepts of transaction processing, basic database storage structures and access techniques			K2, K3, K4	
4.	Apply indexing techniques to access and generate user reports for a database.			K2, K3	
5.	Building Web Applications using Python & SQL.			K4, K5	
K1 - Remember; K2 - Understand; K3 - Apply; K4 - Analyze; K5 - Evaluate; K6– Create					
UNIT:1	INTRODUCTION TO DATABASE AND RELATIONAL MODEL			10 Hours	
	Introduction: Database applications, Purpose of database systems, Views of data, Database Development Life cycle, Architecture of DBMS. Overview of query processing. Relational Databases: Relational model, Database schema, Keys, Formal Relational Query Languages				
UNIT:2	DATABASE DESIGN			10 Hours	
	Logical Database Design: Different approaches in Logical design, ER Modeling, ER notations, Steps in ER modeling. Physical database design: Converting ER Model to Relational Database Design, Normalization -Functional Dependency, 1NF, 2NF, 3NF (optional: multi-valued dependency and 4th Normal form).				
UNIT:3	QUERY OPTIMIZATION, TRANSACTION PROCESSING AND CONCURRENCY CONTROL			9 Hours	
	I SQL Standards – Data types – Database Objects- DDL-DML-DCL-TCL-Embedded SQL- Static Vs Dynamic SQL. Query Processing and Optimization – Heuristics and Cost Estimates in Query Optimization. Transactions: Concept and purpose, ACID properties and their necessity. Concurrency Control: lock-based protocols, 2-phase locking, Timestamp based protocols. Deadlock handling				
UNIT:4	STORAGE AND INDEXING			9 Hours	
	Storage and File structure: File Organization, RAID. Indexing: Concepts, Clustered and Non-Clustered Indices, B-tree and B+-tree. Basics of Hashing (Static, Dynamic).				
UNIT:5	DATABASE SECURITY			10 Hours	
	Data Classification-Threats and risks – Database access Control – Types of Privileges – Statistical Databases. - Distributed Databases-Architecture-Transaction Processing. Data Warehousing and Mining-Classification-Association rules-Clustering-Information Retrieval				
	Total Lecture hours			48 hours

Course Code	Python Programming & SQL Lab	L	T	P	C
Core/Elective/ Supportive	Core Lab 1	-	-	4	2
Pre-requisite	Exposure to basic syntax of any programming language	Syllabus Version		2025 – 26 onwards	
Course Objectives:					
The main objectives of this course are to:					
1. Apply the basic Python programming constructs and data structures.					
2. Apply file concepts, create modules and packages					
3. Analyze data using Python					
Expected Course Outcomes:					
On the successful completion of the course, student will be able:					
1.	Solve problems using various control statements, functions and strings in Python	K3			
2.	Make use of Python lists , set, tuples, dictionaries to represent compound	K4			
3.	Describe the fundamental elements of relational database management systems	K1, K2			
4.	Design relational schema using database design principles	K2, K3			
5.	Explain the concepts of transaction processing, basic database storage structures and access techniques	K2, K3, K4			
K1 - Remember; K2 - Understand; K3 - Apply; K4 - Analyze; K5 - Evaluate; K6– Create					
PYTHON PROGRAMMING LAB					
EXERCISE 1	Introduction to Python	6			
Programs using expressions and input and output statements. Programs using operators, built in functions and conditional statements					
EXERCISE 2	Functions	6			
Programs using Functions-Programs to find square root, GCD, sum an array of numbers					
EXERCISE 3	Data Structures: Strings and Lists	6			
Programs performing all string operations - perform operations on lists- Sorting of elements (Selection and insertion sort)					
EXERCISE 4	Data Structures: Tuples, Dictionaries, Sets	6			
Programs using dictionaries and sets – Tuples					
EXERCISE 5	Files, Modules, Packages and Data Analysis	6			
SQL LAB					
LIST OF EXPERIMENTS					15
1. Creation of a database and writing SQL queries to retrieve information from the database.					
2. Creating relational database to set various constraints.					
3. Performing Insertion, Deletion, Modifying, Altering, Updating and Viewing records based on conditions.					
4. Working on TCL, DCL commands					
5. Creating relationship between the databases.					
Total Marks : 45

Course Code	Descriptive Statistics	L	T	P	C
Core/Elective/ Supportive	Allied 1	4	-	-	4
Pre-requisite	Basic level on Mathematical Computation	Syllabus Version		2025 – 26 onwards	
Course Objectives:					
The main objectives of this course are to: Understand the significance and computational aspects of statistical analysis Understand the patterns of distribution of data Understand the concepts of predictive analytics					
Expected Course Outcomes:					
On the successful completion of the course, student will be able:					
1	Understand the scope and necessity of Statistics and the representation of data			K1, K2	
2	Tabulate and represent the data in diagrams and graphs			K2, K3	
3	Apply the formula and calculate descriptive measures of statistics			K2, K3,K4	
4	Analyze the nature of data and interpret the measures			K2, K3,K4	
5	Analyze the data and predict the future values using regression			K4,K5	
K1 - Remember; K2 - Understand; K3 - Apply; K4 - Analyze; K5 - Evaluate; K6– Create					
UNIT:1	Status of Statistics and collection of data			9 hours	
Origin, scope, definition, limitations of Statistics. Data- Types- Primary and Secondary Data- Methods of data Collection					
UNIT:2	Classification, Tabulation and graphical representation			9 hours	
Classification of data, preparation of tables, Diagrammatic representation of data: One dimensional and Two dimensional diagrams – Graphical representation: Line diagram, Frequency polygon, Frequency curve, Histogram					
UNIT:3	Measures of Central Tendency and location			10 hours	
Measures of Central Tendency: Mean, Median, Mode, Geometric Mean and Harmonic Mean- Properties with Merits and Demerits- Empirical Relation between means. Partition values: Quartiles, Deciles and Percentiles.					
UNIT:4	Measures of Dispersion			10 hours	
Absolute and Relative Measures Range, Mean deviation, Quartile deviation and Standard deviation – Measures of Skewness - Pearson's and Bowley's Coefficient of Skewness, Coefficient of Skewness based on moments – Kurtosis and its significance					

UNIT:5	Measures of Variation, correlation and regression	10 hours
Measures of Variation : Standard, Mean and Quartile deviations-Co efficient of variation. Simple Correlation - Karl Pearson's Co-efficient of correlation – Rank correlation - Regression lines.		
	Total Lecture hours	48 hours

Pre - requisite	Computer Fundamentals	Syllabus version		2025 – 26 onwards		
Course Objectives						
The main goal of this course is to help students learn, understand, and practice big data analytics and machine learning approaches, which include the study of modern computing big data technologies and scaling up machine learning techniques focusing on industry applications.						
Expected Course Outcomes						
1	Ability to select and implement machine learning techniques and computing environment that are suitable for the application.				K1, K2	
2	Ability to identify the characteristics of datasets and compare the trivial data and unstructured data				K2, K3	
3	Ability to understand and apply scaling up machine learning techniques and associated computing techniques and technologies				K2, K3	
4	Ability to recognize and implement various ways of selecting suitable model parameters for different machine learning techniques.				K1, K2	
5	Ability to integrate machine learning libraries and mathematical and statistical tools with modern technologies				K2, K3	
K1 – Remember K2 – Understand K3 – apply K4- Analyze K5 – evaluate K6-Create						
UNIT I	INTRODUCTION TO DATA ANALYSIS				12	
Introduction to Big Data Platform – Challenges of conventional systems – Web data –Evolution of Analytic scalability, analytic processes and tools, Analysis vs reporting – Modern data analytic tools,						
UNIT II	DATA ANALYSIS TECHNIQUES				12	
Regression modeling, Multivariate analysis, Bayesian modeling, inference and Bayesian networks, Support vector and kernel methods, Analysis of time series: linear systems analysis, nonlinear dynamics – Rule Induction.						
UNIT III	LINEAR METHODS FOR REGRESSION AND CLASSIFICATION				12	
Overview of supervised learning, Linear regression models and least squares, Multiple regression, Multiple outputs, Subset selection ,						
UNIT IV	BASIC ANALYSIS TECHNIQUES				12	
Basic analysis techniques, Statistical hypothesis generation and testing, Chi-Square test, t-Test, Analysis of variance, Correlation analysis, Maximum likelihood test, Practice and analysis with R or Python						

UNIT V	MODEL ASSESSMENT AND SELECTION	12
Bias, Variance, and model complexity, Bias-variance trade off, Optimism of the training error rate, Estimate of In-sample prediction error, Effective number of parameters		
Total Lecture Hours		60 Hours

Course Code	Advanced Excel Lab	L	T	P	C
Core/Elective/ Supportive	Core Lab 2	-	0	4	2
Pre - requisite	Logical reasoning and interest in data handling	Syllabus version		2025 – 26 onwards	
Course Objectives					
The main objectives of this course are to: 1. Construct formulas, including the use of built-in functions, and relative and absolute references. 2. Convert text and validate and consolidate data. 3. Create pivot tables and charts.					
Expected Course Outcomes					
1	Develop organized data format using sorting and filtering components	K3, K4			
2	Design advanced graphic presentations on stored data	K3,K4			
3	Sort, search, and extract knowledge from historical data	K3,K4, K5			
K1 – Remember K2 – Understand K3 – apply K4- Analyze K5 – evaluate K6- Create					
EXERCISE 1	INTRODUCTION TO SPREADSHEETS				9
Introduction to spreadsheets, reading data, manipulating data. Basic spreadsheet operations and functions					
EXERCISE 2	DATA CLEANING AND WORKING WITH CONDITIONS USING EXCEL				9
Working with Text: Conditional expression (IF and nested IF), Logical Funcion(AND, OR, NOT) Concatenate functions in Excel-Left, Right, Upper and Lower, Data filtering capabilities of Excel, the construction of Pivot Tables to organize data and introduction to charts in Excel, Using Ranges Selecting Ranges, Entering Information Into a Range, Using AutoFill					
EXERCISE 3	DATA MANIPULATION USING EXCEL				10
Using Formulas, Formula Functions – Sum, Average, if, Count, max, min, Proper, Upper, Lower, Using AutoSum, Vlookup, VlookUP with Exact Match, Approximate Match, Nested VlookUP, Hlookup, Match, Countif, Text, Trim					
EXERCISE 4	DATA ANALYSIS				10
What-if-Analysis- Goal Seek, Data Table, Scenario Manager, Formatting Charts, 3D Graphs,					
EXERCISE 5	ADVANCED GRAPHING AND CHARTING				10
Formatting and customizing Pivot tables, Using advanced options of Pivot tables, Pivot charts, Line, Bar and Pie charts, , Scatter plots, Histograms					
Total Practical Hours					48

Course code	Internet Basics Lab	L	T	P	C
Core/Elective/ Supportive	Core Lab 3	-	-	4	2
Pre-requisite	Familiarity with Windows OS or any graphical user interface.	Syllabus Version		2025 – 26 onwards	
Course Objectives:					
1. Introduce the fundamentals of Internet and the Web functions.					
2. Impart knowledge and essential skills necessary to use the internet and its various components.					
3. Find, evaluate, and use online information resources.					
4. Use Google Apps for education effectively.					
Expected Course Outcomes:					
1	Apply the predefined procedures to create Gmail account, check and receive messages			K3	
2	Apply the predefined procedures to perform various basic operations on internet			K3	
3	Utilize various google applications like docs, google classroom, google drive, google forms, google meet and slides			K3	
K1 – Remember; K2 – Understand; K3 – Apply; K4 – Analyze; K5 – Evaluate; K6– Create					
PROGRAM - 1					1
Create an email account in Gmail. Using the account created compose a mail to invite other college students for your college fest, enclose the invitation as attachment and send the mail to at least 50 recipients. Use CC and BCC options accordingly					
PROGRAM - 2					1
Open your inbox in the Gmail account created, check the mail received from your peer from other college inviting you for his college fest, and download the invitation. Reply to the mail with a thank you note for the invite and forward the mail to other friends					
PROGRAM - 3					1
Assume that you are studying in final year of your graduation and are eagerly looking for a job. Visit any job portal and upload your resume.					
PROGRAM - 4					1
Create a meeting using Google calendar and share meeting id to the attendees. Transfer the ownership to the Manager once the meeting id is generated.					
PROGRAM - 5					1
Create a label and upload bulk contacts using import option in Google Contacts					
PROGRAM - 6					2
Create your own Google classroom and invite all your friends through email id. Post study material in Google classroom using Google drive. Create a separate folder for every subject and upload all unit wise E-Content Materials.					
PROGRAM - 7					1
Create and share a folder in Google Drive using „share a link“ option and set the permission to access that folder by your friends only.					
PROGRAM - 8					1
Create one-page story in your mother tongue by using voice recognition facility of Google Docs					
PROGRAM - 9					1
Create a registration form for your Department Seminar or Conference using Google Forms.					
PROGRAM - 10					1
Create a question paper with multiple choice types of questions for a subject of your choice, using Google Forms.					
PROGRAM - 11					1

Create a meet using Google Calendar and record the meet using Google Meet. Create a Google slides for a topic and share the same with your friends.		
PROGRAM - 12		1
Create template for a seminar certificate using Google Slides.		
PROGRAM - 13		1
Create a sheet to illustrate simple mathematical calculations using Google Sheets. Create student's internal mark statement and share the Google sheets via link.		
	Total Lecture hours	14 hours

Course code	21CSEGC06	Mathematical foundations for Machine learning	L	T	P	C
Core/Elective/Supportive		Allied	4	-	0	4
Pre-requisite		Basic Mathematics	Syllabus Version		2025 – 26 onwards	
Course Objectives:						
The main objectives of this course are to:						
1. To understand linear programming methods. 2. To understand Dynamic programming approach. 3. To understand concepts basics concepts of Linear Algebra 4. To understand concepts of vector spaces and matrices 5. To understand the applications of Linear Algebra in Machine Learning						
Expected Course Outcomes:						
On the successful completion of the course, student will be able to:						
1	Solve linear programming techniques to optimization problems arising in all Computer fields					K3
2	Use Dynamic programming approach to real time problems.					K3
3	Understand the basics of Linear Programming constructs					K2
4	Apply vector spaces and their applications in Machine Learning					K3
5	Understand the concepts of matrix, Gaussian Elimination and differential equations and Apply the concepts of Linear Algebra in Machine Learning Algorithms					K2, K5
K1 - Remember; K2 - Understand; K3 - Apply; K4 - Analyze; K5 - Evaluate; K6 - Create						
Unit:1	Linear Programming Problem				10 hours	
Introduction to Operations Research: Basics definition - scope – objectives - phases - models - limitations of Operations Research - Linear Programming Problem - Formulation of LPP - Graphical solution of LPP - Simplex Method - Artificial variables - Big-M method - Two-phase method - Degeneracy - Unbound solutions – Duality in Linear Programming Problems – Dual Simplex - Introduction to optimization - gradient descent method - convex optimization.						
Unit:2	Dynamic Programming				12 hours	
Introduction - Characteristics of dynamic programming – Dynamic programming approach for Priority Management employment smoothening – capital budgeting – Stage Coach/Shortest Path – cargo loading and Reliability problems.						

Unit:3	Geometry Linear Equations and Vector Spaces	12 hours	
The Geometry of Linear Equations - An Example of Gaussian Elimination- Matrix Notation and Matrix Multiplication - Triangular Factors and Row Exchanges- Inverses and Transposes. Vector Spaces and Subspaces – Solving $Ax=0$ and $Ax=b$ - Linear Independence, Basis and Dimension- The Four Fundamental Subspaces- Graphs and Networks- Linear Transformations.			
Unit:4	Determinants, Eigenvalues and Eigenvectors	12 hours	
Determinants: Introduction- Properties of the Determinant- Formulas for the Determinant – Applications of Determinants. Eigenvalues and Eigenvectors: Introduction- Diagonalization of a Matrix .- Difference Equations and Powers A^k - Differential Equations and e^{At} - Complex Matrices- Similarity Transformations – A - Applications of Machine Learning – Use cases.			
Unit:5	Positive Definite Matrices	12 hours	
Minima, Maxima, and Saddle Points - Tests for Positive Definiteness - Singular Value Decomposition – Machine Learning Applications – Use cases.			
Unit:6	Contemporary Issues	2 hours	
Use Linear and Dynamic programming approach to real time problems. Apply the concepts of Linear Algebra in Machine Learning Algorithms Expert lectures, online seminars – webinars			
	Total Lecture hours	60 hours

Third Semester

Course Code	Data Engineering	L	T	P	C
Core/Elective/ Supportive	Core 4	3	-		3
Pre-requisite	Understanding of SQL and database concepts	Syllabus Version		2025 – 26 onwards	
Course Objectives:					
The main objectives of this course are to:					
1. Identify basic concepts, terminology, theories, models and methods in the field of Data Engineering					
2. Apply data transformations such as aggregation and filtering for visualization					
3. Identify opportunities for application of data visualization in various domains.					
Expected Course Outcomes:					
On the successful completion of the course, student will be able:					
1	Acquire knowledge on various phases of data engineering				K1, K2
2	Identify necessity of data pre-processing and apply the appropriate procedure				K2, K3
3	Demonstrate data warehouse schema and process of data retrieval for real time applications.				K2, K3,K4
K1 - Remember; K2 - Understand; K3 - Apply; K4 - Analyze; K5 - Evaluate; K6–Create					
UNIT:1	DATA ENGINEERING INTRODUCTION				8 Hours
KDD Process – Kinds of data can be mined – Kind of patterns can be mined – Technologies used – Kinds of Applications targeted – Issues in data mining - Data Objects and Attribute Types - Data preprocessing overview – Data Cleaning – Data Integration – Data Reduction – Data Transformation and Discretization					
UNIT:2	DATA WAREHOUSING				10 Hours
Data warehouse – Basic Concepts –Modeling - Data cube and OLAP – Data warehouse Design and Usage – Implementation - Data Generalization by Attribute Oriented Induction.					
UNIT:3	DATA MODELING				10 Hours
Introduction to data modeling-Relational data models-NoSQL data models-Data Pipelines- Data Quality-Production data Pipelines					
UNIT:4	DATA PROCESSING				10 Hours
ETL basics –Extraction of Data-Extraction Methods-Transportation of data- Transportation mechanisms-ETL Tools-Loading and Transformation. Data Capture-Data warehouse performance-basic query-advanced query-Schema modeling techniques-Analysis and Reporting-OLAP					
UNIT:5	DATA VISUALIZATION				10 Hours
Data visualization: Introduction, Types of data visualization, Data for visualization: Data types, Data encodings, Retinal variables, mapping variables to encodings, Visual encodings.					
	Total Lecture hours				48 hours

Course Code	Artificial intelligence		L	T	P	C
Core/Elective/ Supportive	Core 5		4	-	-	3
Pre-requisite	Basic programming knowledge (Python/Java/C++)	Syllabus Version	2025 – 26 onwards			
Course Objectives:						
The main objectives of this course are to:						
1. Understand the fundamentals of artificial intelligence and working of problem-solving agents.						
2. Understand the logical agents and knowledge representation using First Order Logic.						
3. Understand the concept of uncertainty and building principles of decision-making agents.						
Expected Course Outcomes:						
On the successful completion of the course, student will be able:						
1	Demonstrate fundamentals of artificial intelligence (AI) and problem solving using different search methods				K3	
2	Describe about adversarial search and constraint satisfaction problem solving.				K3	
3	Develop knowledge about logic representations for making inferences.				K2	
4	Demonstrate the decision-making techniques to handle uncertainty.				K2	
5	Apply AI principles to develop solutions and applications to solve problems.				K3	
K1 - Remember; K2 - Understand; K3 - Apply; K4 - Analyze; K5 - Evaluate; K6– Create						
Unit: 1	INTRODUCTION AND PROBLEM SOLVING				8 Hours	
Definitions of AI - Intelligent Agents - Problem solving by searching: Problem-solving agents- Example problems – Search for solutions - Uninformed search strategies – Informed search strategies – Heuristic Function – Python AI search implementation.						
Unit: 2	ADVERSARIAL SEARCH AND CSP				10 Hours	
Adversarial search: Games- Optimal decisions in games – Alpha-beta pruning – Imperfect real time decisions. Constraint Satisfaction Problems (CSP): Defining CSP problems-Constraint Propagation: Inference in CSPs - Backtracking search for CSPs.						
Unit: 3	LOGICS AND KNOWLEDGE REPRESENTATION				10 Hours	
Logical agents: Knowledge-based agents – The Wumpus world. Logic – Propositional logic: A very simple logic-Propositional theorem proving. First order logic: Representation – Syntax and semantics of first order logic – Using first order logic-PROLOG basics. Inference in first order logic: Propositional versus first order inference– Unification and lifting –Forward chaining – Backward chaining – Resolution.						
Unit: 4	UNCERTAINTY AND DECISION MAKING				10 Hours	

Making Simple Decisions-Combining beliefs and desires under Uncertainty-Utility Theory-Utility Functions-Multi-attribute utility functions- Quantifying uncertainty: Acting under uncertainty - Probability basics – Bayes’ Rule and its use. Probabilistic reasoning: Representing knowledge in uncertain domain- The semantics of Bayesian networks - Decision networks- The value of information-Decision theoretic expert systems.		
Unit:5	AI APPLICATIONS	10 Hours
Future of Artificial Intelligence - Natural Language Processing - Speech Recognition – Robotics – Expert Systems - AI Application Case Studies.		
Total Lecture hours		48 hours

Course code	Applied Data Structures	L	T	P	C
Core/Elective/ Supportive	Core 6	3	0	0	2
Pre-requisite	Understanding of control structures (loops, conditionals, functions)	Syllabus Version		2025 – 26 onwards	
Course Objectives:					
The main objectives of this course are to:					
1. Master the implementation of linked data structures such as stack, queues, linked lists, trees etc.					
2. To choose the appropriate data structure for a specific application					
Expected Course Outcomes:					
On the successful completion of the course, student will be able to:					
1	Construct and analyze Linked list operations with illustrations			K2,K3	
2	Construct and analyze stack operations with illustrations			K2,K3	
3	Enhance the knowledge of Queue and Hashing.			K2,K3	
4	Demonstrate the concept of trees and its applications			K2,K3	
5	Demonstrate the concept of Graph and its applications			K2,K3	
K1 - Remember; K2 - Understand; K3 - Apply; K4 - Analyze; K5 - Evaluate; K6 – Create					
Unit:1	LINKED LIST			8 hours	
Array list-Review of Pointers- Linked lists –Types- Operations - Creation, Insertion, Deletion, Modification Doubly Linked List operations					
Unit:2	STACK			10 hours	
Stacks – Operations implemented using arrays and Linked list – Applications of Stack – Balancing Parenthesis – Infix to Postfix Conversion, Postfix Expression Evaluation					
Unit:3	QUEUES AND HASHING			10 hours	
Queues – Operations on Queues, Circular Queue – Operations, Double ended queue – Priority queue – Hashing- Collision resolution strategies					
Unit:4	TREES			10 hours	
General Trees Representation – Tree Traversals – Binary Trees- Expression trees – Binary Search Tree operations – B-Trees – B+Trees.					
Unit:5	GRAPHS			10 hours	
Graphs and their representation: BFS, DFS – Shortest Path Algorithms – Dijkstra’s Algorithm – Minimum Spanning Tree – Topological Sorting					
Total Hours : 45

Pre-requisite	Basics of sampling techniques	Syllabus Version		2025 – 26 onwards	
Course Objectives:					
The main objectives of this course are to: 1. Gain knowledge on the methods of testing statistical hypothesis. 2. Understand the meaning and applications of tests of significance					
Expected Course Outcomes:					
On the successful completion of the course, student will be able:					
1	Understand testing of statistical hypothesis			K1, K2	
2	Understand the concept of powerful tests based on ‘t’ and ‘F’ distributions			K2, K3	
3	Understand the concept of variability to draw inferences			K2, K3,K4	
4	Analyze the test of goodness of fit			K2, K3,K4	
5	Understand and apply suitable test for analysis			K4,K5	
K1 - Remember; K2 - Understand; K3 - Apply; K4 - Analyze; K5 - Evaluate; K6– Create					
Unit:1	Tests of Hypotheses			8 Hours	
Procedure of Testing hypothesis –two types of errors – critical region-Two - tailed and one- tailed tests, measuring the power of a hypothesis test					
Unit:2	Estimation			10 Hours	
Properties of a good estimator, Tests of significance of attributes-tests for number of successes and proportion of successes					
Unit:3	Tests of significance for large samples			10 Hours	
Difference between small and large samples-two tailed test for difference between means of two samples, standard deviations					
Unit:4	Test of significance for small samples			10 Hours	
Assumption of normality-Student’s t-distribution-Properties of t-distribution-Application of t-distribution					
Unit:5	Sampling Distributions			10 Hours	
Chi-square distribution, Fisher’s z distribution and F-test					
Total Lecture hours : 48 Hours

Course Code	Mini project I using Python Programming / Advanced Excel	L	T	P	C
Core/Elective/ Supportive	Skill based Subject-1	-	-	3	2
Pre-requisite	Students should have a good understanding of Python Programming Advanced Excel	Syllabus Version		2025 – 26 onwards	
Course Objectives:					
The main objectives of this course are to:					
1. To understand and select the task based on their core skills					
2. To get the knowledge about analytical skill for solving the selected task					
3. To get confidence for implementing the task and solving the real time problems.					
Expected Course Outcomes:					
On the successful completion of the course, student will be able:					
1	Illustrate a real world problem and identify the list of project requirements				K3
2	Judge the features of the project including forms, databases and reports				K5
3	Design code to meet the input requirements and to achieve the required output				K6
4	Compose a project report incorporating the features of the project				K6
K1 - Remember; K2 - Understand; K3 - Apply; K4 - Analyze; K5 - Evaluate; K6– Create					
Aim of the project work					
1. The aim of the project work is to acquire practical knowledge on the implementation of the programming concepts studied					
2. Each student should carry out individually one project work and it may be a work using the software packages that they have learned or the implementation of concepts from the papers studied or implementation of any innovative idea focusing on application-oriented concepts					
3. The project work should be compulsorily done in the college only under the supervision of the department staff concerned.					
Viva Voce					
1. Viva-Voce will be conducted at the end of the year by both Internal (Respective Guides) and External Examiners, after duly verifying the Annexure Report available in the College, for a total of 75 marks at the last day of the practical session.					
2. Out of 75 marks, 45 marks for project report and Viva Voce and 30 Marks for Internal Assessment.					
Project Work Format					
PROJECT WORK TITLE OF THE DISSERTATION Bonafide Work Done by STUDENT NAME REG. NO. Dissertation submitted in partial fulfillment of the requirements for the award of < Name of the Degree> of Bharathiar University, Coimbatore-46. College Logo					
Signature of the Guide			Signature of the HOD		

Submitted for the Viva-Voce Examination held on _____

Internal Examiner

External Examiner

Month – Year

Acknowledgement Contents

Synopsis

1. Introduction

- 1.1 Organization Profile
- 1.2 System Specification
 - 1.2.1 Hardware Configuration
 - 1.2.2 Software Specification

2. System Study

- 2.1 Existing System
 - 2.1.1 Drawbacks
- 2.2 Proposed System
 - 2.2.1 Features

3. System Design and Development

- 3.1 File Design
- 3.2 Input Design
- 3.3 Output Design
- 3.4 Database Design
- 3.5 System Development
 - 3.5.1 Description of Modules (Detailed explanation about the project work)

4 Software Testing and Implementation Conclusion

Bibliography Appendices

- A. Data Flow Diagram
- B. Table Structure
- C. Sample Coding
- D. Sample Input
- E. Sample Output

Fourth Semester

Course Code	R Programming	L	T	P	C
Core/Elective/ Supportive	Core 7	4	0	0	4
Pre - requisite	Familiarity with computer programming concepts	Syllabus version		2025 – 26 onwards	
Course Objectives					
To expose the student to the fundamental concepts of R Programming					
Expected Course Outcomes					
1	Understand the basics in R programming in terms of constructs, control statements, string functions				K2
2	Understand the use of R for Big Data analytics				K2
3	Apply R programming for Text processing				K3
4	Appreciate and apply the R programming from a statistical perspective				K3
K1 – Remember K2 – Understand K3 – apply K4- Analyze K5 – evaluate K6- Create					
UNIT I Introducing to R					
Introducing to R – R Data Structures – Help Functions in R – Vectors – Scalars – Declarations – Recycling – Common Vector Operations – Using all and any – Vectorized operations – Filtering – Vectorized if-then else – Vector Element names.					
UNIT II Matrices					
Creating matrices – Matrix Operations – Applying Functions to Matrix Rows and Columns – Adding and deleting rows and columns - Vector/Matrix Distinction – Avoiding Dimension Reduction – Higher Dimensional arrays – lists – Creating lists – General list operations – Accessing list components and values – applying functions to lists – recursive lists.					
UNIT III Data Frames					
Creating Data Frames – Matrix-like operations in frames – merging Data frames – Applying functions to Data Frames – Factors and Tables – Factors and levels – Common Functions used with factors – Working with tables – Other factors and table related functions – Control statements – Arithmetic and Boolean operators and values – Default Values for arguments – Returning Boolean Values – Functions are objects – Recursion					
UNIT IV Classes					
S3 Classes – S4 Classes – Managing your objects – Input/output – accessing keyboard and monitor – reading and writing files – accessing the internet – String Manipulation – Graphics – Creating Graphs– Customizing Graphs – Saving Graphs to files – Creating Three-Dimensional plots					
UNIT V Modelling in R					
Interfacing R to other languages – Parallel R – Basic Statistics – Linear Model – Generalized Linear models – Non-linear Models – Time Series and Auto-Correlation – Clustering.					
Total Lecture Hours					60 Hours

Course code	MACHINE LEARNING TECHNIQUES	L	T	P	C
Core/Elective/ Supportive	Core 8	4	-	-	4
Pre-requisite	Familiarity with data preprocessing and visualization	Syllabus Version		2025 – 26 onwards	
Course Objectives:					
The main objectives of this course are to:					
1. Understand the significance and basic concepts of machine learning.					
2. Understand different forms/methods of learning and its algorithmic perspective.					
3. Understand the various applications of machine learning.					
Expected Course Outcomes:					
On the successful completion of the course, student will be able:					
1	Understand the fundamentals and different forms of machine learning.				K2
2	Demonstrate various parametric and semi parametric machine learning techniques.				K2
3	Demonstrate various non- parametric machine learning techniques.				K2
4	Explain about the concepts of computational learning theory and dimensionality reduction				K2
5	Develop applications using appropriate machine learning approaches for real life problems				K3
K1 - Remember; K2 - Understand; K3 - Apply; K4 - Analyze; K5 - Evaluate; K6– Create					
Unit:1	INTRODUCTION AND SUPERVISED LEARNING				12 hours
Introduction to Machine Learning – basic concepts in machine learning – Forms of Learning - Examples of machine learning applications - Supervised Learning: Learning a Class from Examples–Noise–Learning Multiple Classes– Perspectives and Issues in Machine Learning.					
Unit:2	PARAMETRIC AND SEMI-PARAMETRIC METHODS				12 hours
Parametric Classification – Regression–Tuning Model Complexity–Model Selection Procedures. Multivariate Methods: Data–Parameter Estimation–Estimation of Missing Values–Multivariate Normal Distribution–Multivariate Classification and Regression - Semi parametric method: Clustering –Expectation–Maximization Algorithm - Self Organizing Feature Map.					
Unit:3	NON-PARAMETRIC METHODS				12 hours
Nonparametric Methods: Nonparametric Density Estimation and Classification-Generalization to Multivariate Data–Condensed Nearest Neighbour–Smoothing Models. Decision Trees: Univariate Trees–Pruning–Rule Extraction–Learning Rules–Multivariate Trees.					

Unit:4	COMPUTATIONAL LEARNING	12 hours
Computational Learning theory, mistake bound analysis, sample complexity analysis, VC dimension, Occam learning, accuracy and confidence boosting, Dimensionality reduction: Principal component Analysis, feature selection and visualization.		
Unit:5	ML APPLICATIONS AND CASE STUDY	
Automated knowledge acquisition, pattern recognition, program synthesis, text and language processing, internet-based information systems, human computer interaction, semantic web, and bioinformatics.		12 hours
	Total Lecture hours	60 hours

Course Code	DIGITAL MARKETING	L	T	P	C
Core/Elective/ Supportive	Allied Paper 4	4	-	-	4
Pre-requisite	Basic understanding of marketing principles	Syllabus Version		2025 – 26 onwards	

Course Objectives:

The main objectives of this course are to:

1. Understand the major digital marketing channels - online advertising: Digital display, video, mobile, search engine, and social media
2. Learn and develop, evaluate, and execute a comprehensive digital marketing strategy and plan
3. Learn how to measure digital marketing efforts and calculate ROI
4. Explore the latest digital ad technologies

Expected Course Outcomes:

On the successful completion of the course, student will be able:

1	Define and explain various terminologies associated with Digital Marketing.	K1, K2
2	Apply the knowledge of Digital marketing concepts.	K2, K3
3	Construct an appropriate marketing model.	K2, K3
4	Analyze role and importance of digital marketing in a rapidly changing business landscape.	K3
5	Implement the key elements of a digital marketing strategy.	K2

K1 - Remember; **K2** - Understand; **K3** - Apply; **K4** - Analyze; **K5** - Evaluate; **K6**– Create

Unit:1 INTRODUCTION TO DIGITAL MARKETING 9 hours

Digital marketing, Marketing v/s Sales, comparison between digital and traditional marketing, Benefits of Digital marketing, Digital marketing platforms and Strategies, Defining Marketing Goals, Latest Digital marketing trends, Case studies of Digital Campaigns

Unit:2 SEARCH ENGINE OPTIMIZATION(SEO) 9 hours

Components of Search Engines, SEO Keyword Planning, Meta Tags and Meta Description, Website Content Optimization, Back Link Strategies, Internal and External Links, Optimizing Site Structure Keywords in Blog and Articles, On Page SEO, Off Page SEO, Local SEO, Mobile SEO, Ecommerce SEO, optimizing with Google Algorithms, Using Web Master Tool, Measuring SEO Effectiveness

Unit:3 SOCIAL MEDIA MARKETING (SMM) 10 hours

Introduction to social Media Marketing, Benefits of using SMM, Social Media Statistics, Social Media Strategy, Facebook Marketing, Word Press blog creation, Twitter marketing, LinkedIn Marketing, Google plus marketing, Social Media Analytical Tools

Unit:4	SEARCH ENGINE MARKETING (SEM)	10 hours
Hough transforms and other simple object recognition methods, shape correspondence and shape matching, Principal component analysis, Shape priors for recognition. Image Understanding-Pattern recognition methods-HMM, GMM and EM		
Unit:5	APPLICATION	hours
Google Analytics, Online Reputation Management, E-Mail Marketing, Affiliate Marketing, Social Media Analytics, Ad designing		
	Total Lecture hours	48 hours
	Text Book(s)	
1	Ryan Deiss and Russ Hennesberry, "Digital Marketing forDummies",2017	
2	Puneet singh bhatia, "Fundamentals of DigitalMarketing",2017

Course code	Optimization Techniques	L	T	P	C
Core/Elective/ Supportive	Skill based Subject-2	3	-	-	2
Pre-requisite	Familiarity with matrices and linear equations	Syllabus Version		2025 – 26 onwards	
Course Objectives:					
The main objective of this course is to make the students to gain knowledge about various concepts of Operations Research and to identify and develop operational research models from the verbal description of the real system and train them to apply the operations research tools that are needed to solve optimization problems.					
Expected Course Outcomes:					
On the successful completion of the course, student will be able to:					
1	Define and formulate linear programming problems and evaluate their applications			K1	
2	To understand concepts and terminology of Linear Programming from formulation of mathematical models to their optimization using Simplex Method			K1	
3	To comprehend the concept of a Transportation Model and develop the initial solution and optimality checking of the solution			K2	
4	To apply the strategies of game theory and to make better decisions while solving business problems			K3	
5	Use critical path analysis and programming evaluation and review techniques for timely project scheduling and completion.			K3	
K1 - Remember; K2 - Understand; K3 - Apply; K4 - Analyze; K5 - Evaluate; K6 – Create					
Unit:1					
INTRODUCTION TO OPERATION RESEARCH		9 --hours			
Introduction to Operations Research – Meaning – Scope – Applications - Limitations. Linear programming-Mathematical Formulation-Application in management decision making - Graphical Method-Simplex Method.					
Unit:2					
TRANSPORTATION AND ASSIGNMENT PROBLEMS		9 --hours			
Transportation problems: Introduction- Finding Initial Basic Feasible solutions- moving towards optimality (non degenerate only) – Maximization in transportation problem- Unbalanced transportation problem. Assignment problem: Introduction –Hungarian Assignment method – Maximization in Assignment problem – Unbalanced Assignment problem.					

Unit:3	GAME THEORY	9--hours
Game theory: Concept of Pure and Mixed strategies – solving 2 x 2 matrices with and without saddle point. Graphical solution - mx2 and 2xn games. Solving games by Dominance Property.		
Unit:4	NETWORK ANALYSIS	9 --hours
CPM–Principles–Construction of network- Critical path –Forward pass–Backward pass computations–PERT – Time scale analysis - probability of completion of project – types of floats.		
Unit:5	SEQUENCING PROBLEM AND REPLACEMENT THEORY	10 --hours
Theory of Replacement – Introduction - Replacement models –Replacement of items that deteriorates gradually (value of money does not change with time)		
Unit:6	CONTEMPORARY ISSUES	02-hours
Expert lectures, online seminars – webinars		
Note: Theory and problem shall be distributed as 20% and 80% respectively.		
	Total Lecture hours	48 --hours
Text Book(s)

Fifth Semester

Course Code	Data Visualization		L	T	P	C
Core/Elective/ Supportive	Core 9		6	-	-	4
Pre-requisite	Familiarity with spreadsheets and data analysis	Syllabus Version	2025 – 26 onwards			
Course Objectives:						
The main objectives of this course are to:						
1. Understand the fundamentals of visualization concepts and its importance.						
2. Understand essential design principles to design and develop effective visualizations.						
3. Understand planning and visual analytics through advanced visualization techniques.						
Expected Course Outcomes:						
On the successful completion of the course, student will be able:						
1	Understand foundational visualization concepts				K2	
2	Demonstrate visualizations principles to enhance data visualization				K2	
3	Analyze and apply essential design principles to data exploration and visualization				K3	
4	Design appropriate charts, tables, maps and dashboards				K3	
5	Effectively create and tell a story based on visualized data				K3	
K1 - Remember; K2 - Understand; K3 - Apply; K4 - Analyze; K5 - Evaluate; K6– Create						
Unit: 1	VISUALIZATION FUNDAMENTALS				10 hours	
Introduction to data visualization-Need for data visualization and its definition-Tools for Visualizing Data-Methods of visualizing data-Overview of modern visualization tools - working with various data formats - Basic chart types.						
Unit: 2	DATA VISUALIZATION FOR HUMAN PERCEPTION				14 hours	
The Human Brain and Data Visualization-Cognitive vs Perceptual Design Distinction-Introduction of Effective and Ineffective Visuals-Types of Visualizations and its examples-Practicing Good Ethics in Data Visualization-Ineffective Visuals and improvements-Visual Perception and Cognitive Principles- Strategic Use of Pre-Attentive Attributes - De-Cluttering.						
Unit: 3	DESIGN AND EXPLORATORY ANALYSIS				14 hours	
Introduction-Exploratory and Explanatory Analysis -Identifying Outliers-Constructing a Control Chart-Design For Purpose-Data, Relationships, and Design-Static Versus Interactive Visualizations-Multiple, Connected View, Language, Labelling, and Scales-Visual Lies and Cognitive Bias- Case Study.						
Unit: 4	VISUAL ANALYTICS AND PLANNING				16 hours	
Basics of Visual Analytics -Charts- Colours, Shapes, and Sizes-Dual Line Charts-Bar Charts, Line Graphs, Pie Charts-Scatter Plots, Gantt Charts, Bubble Charts-Histograms, Bullet Charts, Heat Maps and Highlight Tables-Dates-Discrete vs. Continuous Dates-Basics of table calculations-Maps. Introduction to Planning and Preproduction for Visualizations-A Design Checklist-understanding Stakeholders-Prioritizing, Optimizing, and Designing						

Unit:5	DASHBOARD AND STORY TELLING	
Dashboard Design Principles-Hierarchies, Actions, Filters, and Parameters- Creating Dashboards. The Story of the data-The Art of Storytelling (Past, Present, and Future)-Storytelling and the Human Brain-Bringing Data to Life-Emotion Modulators-Framing and Format-False Narratives and Data Storytelling- Preparation of the Story Points – Case Study		18 hours
	Total Lecture hours	72 hours

Course Code	Deep Learning	L	T	P	C
Core/Elective/ Supportive	Core 10	6	-	-	4
Pre-requisite	Understanding of Machine Learning concepts	Syllabus Version		2025 – 26 onwards	
Course Objectives:					
The main objectives of this course are to:					
1. Understand the fundamentals of neural networks and deep networks					
2. Understand the basics of Tensorflow					
3. Understand about the architectures and applications of Deep Learning					
Expected Course Outcomes:					
On the successful completion of the course, student will be able:					
1	Understand the basics of neural networks and deep networks			K2, K3	
2	Develop small applications using Tensorflow			K2, K3	
3	Understand about the major architectures of Deep Networks			K2	
4	Analyze the applications of Deep Learning			K3,K4	
K1 - Remember; K2 - Understand; K3 - Apply; K4 - Analyze; K5 - Evaluate; K6– Create					
Unit:1	Introduction to Learning			10 hours	
Neural Networks – Training Neural networks-Activation functions-Loss functions-Hyperparameters					
Unit:2	Fundamentals of Deep Networks			14 hours	
Defining Deep Learning-Common architectural principles of Deep Networks- Building blocks of Deep Networks					
Unit:3	Tensorflow			14 hours	
Tensorflow – Variables – Operations – Placeholders – Sessions – Sharing Variables – Graphs – Visualization					
Unit:4	Major architectures of Deep Networks			16 hours	
Unsupervised pretrained networks- Convolution Neural Networks- Recurrent neural networks- Recursive neural networks					
Unit:5	Applications			18 hours	
Large scale Deep Learning–Computer Vision- Speech Recognition – Natural Language Processing(NLP) –Other Applications					
	Total Lecture hours			72 hours

Course Code	Data Visualization Laboratory	L	T	P	C
Core/Elective/ Supportive	Core Lab 6	0	0	3	2
Pre - requisite	Basic statistics and data handling	Syllabus version		2025 – 26 onwards	
Course Objectives					
1. Understand the fundamentals of data visualization concepts and basic chart types. 2. Apply essential design principles to design and develop effective visualizations.					
Expected Course Outcomes					
1	Understand concepts and basic charts using data visualization tools and techniques.				K2
2	Analyze and apply essential design principles to data exploration and visualization.				K4
3	Apply appropriate charts, plots, tables, and maps for complex data analysis.				K3
K1 – Remember K2 – Understand K3 – apply K4- Analyze K5 – evaluate K6- Create					
List of Experiments					
60 hours					
1. Create a basic visualization using Google Sheets. 2. Demonstrate proper use of the design principles used: “pop-out” or “pre-attentive” attributes, Gestalt Principles, cognitive load and clutter, and static or interactive format. 3. Analyze customer’s purchases and how much the company is profiting from each customer by create a scatter plot 4. Create a table showing total sales by product category, broken down by Year and Month -sales spotlight. 5. Create a dual layer map showing total profit by postal code, colorized by profit ratio, and sized by total sales. 6. Provided any dataset, create a dashboard consisting of at least 2 KPIs. 7. Create a story consisting of at least three story points and must explicitly answer the business question(s) in the project .

Course code	Social Media Analytics	L	T	P	C
Core/Elective/Supportive	Skill based Subject-3:	6	-	-	2
Pre-requisite	Python or R programming (optional for practicals)	Syllabus Version		2025 – 26 onwards	
Course Objectives:					
The main objectives of this course are to: • Give an overview of social networks and its importance. • Understand the social network concepts and various methods of analysis. • Expose and train on various tools and techniques for analyzing and visualizing social media networks.					
Expected Course Outcomes:					
On the successful completion of the course, student will be able:					
1	Analyze social network data using various software packages.				K1, K2
2	Implement statistical models of social networks to analyze network formation and evolution.				K2, K3
3	Implement the basic concepts and theories of network analysis in the social sciences.				K2, K3
4	Use statistical software to visualize networks and analyze their properties.				K2
K1 - Remember; K2 - Understand; K3 - Apply; K4 - Analyze; K5 - Evaluate; K6– Create					
Unit:1	INTRODUCTION TO SOCIAL NETWORKS AND SNA				10 hours
Connected World – Networks: Actors, Relations and Attributes - Networks as Information Maps - Networks as Conduits – Leaders and Followers – Psychological foundations of social networks – Basic building Blocks – Brief history of Social Network Analysis.					
Unit:2	NETWORK CONCEPTS				14 hours
Individual Members of the Network – Sociological Questions about Relationships – Whole Social Networks- Distributions – Multiplexity – Roles and Positions – Network Segmentation – Graph Theory – Notations for Social Network Data					
Unit:3	SOCIAL NETWORK ANALYSIS FUNDAMENTALS				14 hours
Points, Lines and Density – Centrality and Centralization – Components, Cores and Cliques – Positions, Roles and Clusters – Dimensions and Displays.					
Unit:4	METHODS OF SOCIAL NETWORK ANALYSIS				18 hours
Graphs – Matrices – Relationship Measures – Centrality and Prestiges – Cliques – Structural Equivalence – Visual Displays – Book models – Network Position Measures – Logit Models – Affiliation networks – Lattices- Levels of Analysis					
Unit:5	TOOLS AND TECHNOLOGIES				

Twitter Analytics – Facebook Analytics – Google+ Analytics – Google+ Ripples – R for Social Network Analysis – Pajek – Network Visualization Tools – Analyzing Social Media Networks with NodeXL.		18 hours
	Total Lecture hours	72 hours

Sixth Semester

Course code	Natural Language Processing	L	T	P	C
Core/Elective/ Supportive	Core 11	6	-	-	4
Pre-requisite	Probability and Linear Algebra basics	Syllabus Version		2025 – 26 onwards	
Course Objectives:					
The main objectives of this course are to:					
1. Understand the significance of NLP tasks					
2. Understand about syntax parsing and semantic analysis methods					
3. Understand the application domains of NLP					
Expected Course Outcomes:					
On the successful completion of the course, student will be able:					
1	Demonstrate an understanding of Natural Language Processing tasks in syntax, semantics, and pragmatics.			K1, K2	
2	Demonstrate an understanding of Morphology and Part of Speech Tagging.			K2, K3	
3	Show how syntax parsing techniques can be used.			K2, K3,K4	
4	Explain the use of semantic analysis methods.			K2, K3	
5	Relate a few applications of NLP.			K4,K5	
K1 - Remember; K2 - Understand; K3 - Apply; K4 - Analyze; K5 - Evaluate; K6 – Create					
Unit:1	Introduction			10 hours	
Natural Language Processing tasks in syntax, semantics, and pragmatics – Issues - Applications - The role of machine learning - Probability Basics –Information theory – Collocations -N-gram Language Models - Estimating parameters and smoothing - Evaluating language models.					
Unit:2	Morphology and Part of Speech Tagging			14 hours	
Linguistic essentials - Lexical syntax- Morphology and Finite State Transducers - Part of speech Tagging - Rule-Based Part of Speech Tagging - Markov Models - Hidden Markov Models – Transformation based Models - Maximum Entropy Models. Conditional Random Fields					
Unit:3	Syntax Parsing			14 hours	
Syntax Parsing - Grammar formalisms and tree banks - Parsing with Context Free Grammars - Features and Unification -Statistical parsing and probabilistic CFGs (PCFGs)-Lexicalized PCFGs.					

Unit:4	Semantic Analysis	16 hours
Representing Meaning – Semantic Analysis -Lexical semantics –Word-sense disambiguation - Supervised – Dictionary based and Unsupervised Approaches - Compositional semantics- Semantic Role Labeling and Semantic Parsing– Discourse Analysis.		
Unit:5	Applications	18 hours
Named entity recognition and relation extraction- IE using sequence labeling- Machine Translation (MT) -Basic issues in MT-Statistical translation-word alignment-phrase-based translation – Question Answering		
Total Lecture hours		72 hours

Course Code	Natural Language Processing Lab	L	T	P	C
Core/Elective/ Supportive	Core Lab 7	0	0	6	4
Prerequisite	Access to tools like Jupyter Notebook or Google Colab	Syllabus Version		2025 – 26 onwards	

Course Objectives

- To introduce the fundamental concepts and techniques of natural language processing (NLP)

Expected Course Outcomes

1	Understand the fundamental concepts and techniques of natural language processing (NLP)	K2
2	Understanding of the models and algorithms in the field of NLP.	K2
3	Demonstrate the computational properties of natural languages and the commonly used algorithms for processing linguistic information.	K2
4	Understanding semantics and pragmatics of languages for processing	K2
K1 – Remember K2 – Understand K3 – apply K4- Analyze K5 – evaluate K6- Create		

LIST OF PROGRAMS

- Implementing word similarity
- Implementing simple problems related to word disambiguation
- Simple demonstration of part of speech tagging.
- Lexical analyzer.
- Semantic Analyzer.
- Sentiment Analysis.

Course Code	Project Work Lab	L	T	P	C
Core/Elective/ Supportive	Core 12	0	0	5	4
Pre-requisite	Students should have the strong knowledge in any one of the programming languages in this course.	Syllabus version		2025 – 26 onwards	
Course Objectives					
- To understand and select the task based on their core skills. - To get the knowledge about analytical skill for solving the selected task. - To get confidence for implementing the task and solving the real time problems. - Express technical and behavioral ideas and thought in oral settings. - Prepare and conduct oral presentations					
Expected Course Outcomes					
On the successful completion of the course, student will be able to:					
1	Formulate a real world problem and develop its requirements develop a design solution for a set of requirements				K3
2	Test and validate the conformance of the developed prototype against the original requirements of the problem				K5
3	Work as a responsible member and possibly a leader of a team in developing software solutions				K3
4	Express technical ideas, strategies and methodologies in written form. Self-learn new tools, algorithms and techniques that contribute to the software solution of the project				K1-K4
5	Generate alternative solutions, compare them and select the optimum one				K6
K1 – Remember K2 – Understand K3 – apply K4- Analyze K5 – evaluate K6- Create					
Aim of the project work					

1. The aim of the project work is to acquire practical knowledge on the implementation of the programming concepts studied.
2. Each student should carry out individually one project work and it may be a work using the software packages that they have learned or the implementation of concepts from the papers studied or implementation of any innovative idea focusing on application oriented concepts.
3. The project work should be compulsorily done in the college only under the supervision of the department staff concerned.

Viva Voce

1. Viva-Voce will be conducted at the end of the year by both Internal (Respective Guides) and External Examiners, after duly verifying the Annexure Report available in the College, for a total of 200 marks at the last day of the practical session.
2. Out of 200 marks, 160 marks for project report and 40 marks for Viva Voce.

Elective Course

Course code	TITLE OF THE COURSE	L	T	P	C
		-	-	6	3
Elective I	Marketing Analytics				
Pre-requisite	Optimization Techniques	Syllabus Version			2025 – 26 onwards
Course Objectives:					
The main objectives of this course are to:					
1. To provide knowledge on elements of market analysis					
2. To use marketing analytics to predict outcomes and systematically allocate resources.					
Expected Course Outcomes:					
On the successful completion of the course, student will be able to:					
1	Gain a solid understanding of key marketing concepts and skills			K2 level	
2	Identify and demonstrate the dynamic nature of the environment in which marketing decisions are taken and appreciate the implications for marketing analytics strategy determination and implementation.			K3 level	
3	Develop the students' skills in applying the analytic perspectives, decision tools, and concepts of marketing to decisions involving segmentation, targeting and positioning.			K3 level	
4	Develop an understanding of the underlying concepts, strategies and the issues involved in the exchange of products and services and control the marketing mix variables in order to achieve organizational goals.			K2-K3 level	
5	Develop strong marketing plans and apply the concept of Sales analytics in E commerce sales and metrics			K3 level	
K1 - Remember; K2 - Understand; K3 - Apply; K4 - Analyze; K5 - Evaluate; K6 – Create					
Unit:1	INTRODUCTION			10 hours	
. Marketing Analytics, Models and metrics- Market Insight – Market data sources, sizing, PESTLE trend analysis, and porter five forces analysis – Market segment identification and positioning					
Unit:2	COMPETITIVE ANALYSIS AND BUSINESS STRATEGY:			14 hours	
. Competitor identification, Intelligence gathering, analysis and strategy- Analytics based strategy selection, with strategic models and metrics, Forecasting, balanced scorecard, and critical success factors.					
Unit:3	PRODUCT, SERVICE AND PRICE ANALYTICS:		14 hours		
Conjoint analysis model, decision tree model, portfolio resource allocation, Pricing techniques, pricing assessment, pricing for business markets, price discrimination					
Unit:4	DISTRIBUTION AND PROMOTION ANALYTICS:		16 hours		
Retail location selection, distribution channel evaluation, and multi-channel distribution, Promotion budget estimation and allocation, promotion metrics for traditional media and social media.					
Unit:5	SALES ANALYTICS		18 hours		

E Commerce sales mode, sales metrics, profitability metrics and support metrics.
Total hours: 60

Course code	Data Security and Compliance	L	T	P	C
	Elective I	6	-	-	3
Pre-requisite	Basic Information System exposure	Syllabus Version	2025 – 26 onwards		
Course Objectives:					
The main objectives of this course are to:					
1. Increase information security and privacy awareness.					
2. Manage information system security risk for organizations.					
3. Know the security and privacy compliance requirements and standards					
Expected Course Outcomes:					
On the successful completion of the course, student will be able to:					
1	Understand the Security requirements, components, and processes				K2
2	Understand the various needs, risks and issues related to Information Security				K2
3	To plan information security risk management				K3
4	Understand Physical, Operational and Personnel Security				K2
5	Comprehend the Information Security and Privacy Compliance Requirements				K2
K1 - Remember; K2 - Understand; K3 - Apply; K4 - Analyze; K5 - Evaluate; K6 – Create					
Unit:1					
Introduction				10 hours	
History - What is Information Security? - CIA requirements- security model - Components of an information system - Securing the components - Balancing security and access - The SDLC - Security in SDLC					
Unit:2					
Needs, Information Threats, Attacks and Issues				14 hours	
Need for security - Business needs - Threats – Attacks – Legal - Ethical and professional issues					
Unit:3					
Risk Management				14 hours	
Planning for Security, Risk management: Identifying and assessing risk - Assessing and controlling risk.					
Unit:4					
Physical, Operational and Personnel Security				106hours	
User-Defined Functions: Introduction – Need and Elements of User-Defined Functions- Definition- Return Values and their types - Function Calls – Declarations – Category of					
Unit:5					
Compliance – Information Security Management Systems				18 hours	
Importance of ISMS – Purpose and Objectives, Process Approach, Processes involved in Establishing, Implementing, Operating, Monitoring, Reviewing, Maintaining and Improving ISMS. Scope and Exclusions. ISO 27001, ISO/IEC 27701, GDPR, Data Protection Bill - India

Course Code	Computer Vision	L	T	P	C
	Elective I	6	-	-	3
Pre-requisite	Basic computer knowledge	Syllabus Version		2025 – 26 onwards	
Course Objectives:					
The main objectives of this course are to:					
1. Identify basic concepts, terminology, theories, models and methods in the field of computer vision					
2. To give an understanding of image processing for computer vision					
3. Focus on early processing of images and the determination of structure: edges, lines, shapes.					
Expected Course Outcomes:					
On the successful completion of the course, student will be able:					
1	Acquire knowledge on Image retrieval and processing			K1, K2	
2	Design and deploy various image formation models			K2, K3	
3	Apply the techniques of motion estimation and object recognition.			K2, K3, K4	
K1 - Remember; K2 - Understand; K3 - Apply; K4 - Analyze; K5 - Evaluate; K6– Create					
Unit:1	INTRODUCTION			10 hours	
Image Processing-Computer Vision-Low Level-Mid Level-High Level-Overview of diverse computer vision applications: Document Image Analysis, Biometrics, Object Recognition Tracking ,Medical Image Analysis, Content Based Image Retrieval, Video data Processing, Multimedia, Virtual Reality and Augmented Reality					
Unit:2	IMAGE FORMATION MODELS			14 hours	
Monocular Imaging System-Camera Model and Camera calibration-Binocular Imaging System, Multiple views geometry, Structure Determination, Shape from Shading-Construction of 3D model from images. Image Processing and Feature Extraction-Image representation, Edge detection					
Unit:3	MOTION ESTIMATION			14 hours	
Optical Computation, Structure from motion. Shape Representation and Segmentation-Contour based representation, Region based representation, Deformable curves and surfaces, multiresolution analysis					
Unit:4	OBJECT RECOGNITION			16 hours	
Hough transforms and other simple object recognition methods, shape correspondence and shape matching, Principal component analysis, Shape priors for recognition. Image Understanding-Pattern recognition methods-HMM,GMM and EM					
Unit:5	APPLICATIONS			18 hours	
Photo album-face detection-Face recognition-Eigen faces-Surveillance-foreground-background separation-particle filters-chamfer matching, tracking-occlusion-combining views from multiple cameras-locating roadway-road markings-identifying road signs-locating pedestrians					
	Total Lecture hours			72

Course code	Supply Chain and Logistics Analytics	L	T	P	C
	Elective II	5	-	-	3
Pre-requisite	Introduction to Data Analytics		Syllabus Version	2025 – 26 onwards	
Course Objectives:					
Expected Course Outcomes:					
On the successful completion of the course, student will be able:					
1	Understand of the role and importance of Supply chain management.			K1, K2	
2	Understand the concepts of planning systems			K2	
3	Understand the concepts of Logistics management			K2,	
K1 - Remember; K2 - Understand; K3 - Apply; K4 - Analyze; K5 - Evaluate; K6– Create					
Unit: 1	Introduction			12 hours	
Basics of Supply Chain Management Supply Chain Management – An Overview Supply Chain Analysis Types of Supply Chains Advanced Planning					
Unit: 2	Concepts of Advanced Planning Systems			12 hours	
Structure of Advanced Planning Systems, Strategic Network Planning, Demand Planning, Master Planning, Demand Fulfilment, Transport Planning Coordination, and Integration Collaborative Planning					
Unit: 3	Implementing Supply Chain Project			12 hours	
Implementing Advanced Planning Systems, The Definition of a Supply Chain Project, The Implementation Process					
Unit: 4	Logistics Management			12 hours	
Definition and Evolution -Achievement of competitive advantage through logistics Framework- Role of Logistics Management-Integrated Logistics Management - Model – Flow of process activities					
Unit: 5	Logistics Strategy			12 hours	
Strategic role of logistics – Definition-role of logistics managers in strategic decisions: Strategy options, Lean Strategy, Agile Strategies & Other strategies: Designing & Implementing logistical strategy.

Course code	Business and Financial Analytics	L	T	P	C
	Elective II	5	-	-	3
Pre-requisite	Basic Analytical Tools	Syllabus Version		2025 – 26 onwards	
Course Objectives:					
The main objectives of this course are to:					
1. Understand the significance and fundamentals of Business analytics					
2. Understand the basic models of analytics.					
3. Understand the Financial analytics concepts					
Expected Course Outcomes:					
On the successful completion of the course, student will be able:					
1	Understand the basics on Business Intelligence.				K1, K2
2	Describe the essentials on Business Analytics models				K2, K3
3	Understand the importance of Business Analytics for Managers				K2, K3,K4
4	Explain the role and importance of Financial Analytics.				K2, K3
5	Understand the role of Business Analyst and Data Science in business				K4,K5
K1 - Remember; K2 - Understand; K3 - Apply; K4 - Analyze; K5 - Evaluate; K6– Create					
Unit: 1	Business Intelligence (BI)				12 hours
Business Intelligence - Definitions - Evolution of Business Intelligence and Role of DSS, EIS, MIS and Digital dash boards-Difference between ERP and Business Intelligence-need for BI-BI for past, Present and Future. Business Intelligence Applications-technology solutions and business solutions-Business Intelligence Roles and Responsibilities.					
Unit: 2	Essentials of Business Analytics				12 hours
Introduction: Decision Making- Business Analytics Definition-Business Analytics meaning - categorization of Analytical methods and models: Descriptive -Predictive -Prescriptive–Big data-Business Analytics in practice: Financial, Human Resource, Marketing, Health care, Supply chain Analytics. Analytics for government and Nonprofits, sports and web Analytics					
Unit: 3	Business Analytics for Managers				12 hours
Business analytics model: Overview of Business-driven environment & technically oriented environment-types of Reporting and Analytical process-case study.					
Unit: 4	Financial Analytics				12 hours
Introduction: Meaning-Importance of Financial Analytics uses-Features-Documents used in Financial Analytics: Balance Sheet, Income Statement, Cash flow statement-Elements of Financial Health: Liquidity, Leverage, Profitability.					
Unit:5	Analysts: Role and Responsibilities				12 hours

Information and Knowledge-Methodology-Data-Required Competencies for the Analyst- Data Scientist vs. Data Engineer vs. Business Analyst, Career in Business Analytics, , Applications for data science, Data Scientists Roles and Responsibility		
	Total Lecture hours	60 hours
	Text Book(s)	
1	An Introduction to Business Analytics, Ger Koole, Lulu.com, 2019	
2	Business Analytics for Managers - GEAT H.N.LAURSEN JESPER THORLUND, P.No: 1-16- UnitIII, P.No:93-136-Unit V	
3	Fundamentals of Business Analytics -R N Prasad,. Seema Achavya, Wiley India PVT Ltd, New Delhi, P.No: 87-100, P.No:115-125

Course code	Recommender Systems	L	T	P	C
	Elective II	5	-	-	3
Pre-requisite	Working knowledge of Excel and introductory data analytics tools	Syllabus Version		2025 – 26 onwards	
Course Objectives:					
The main objectives of this course are to:					
1. Understand about different types of recommender systems.					
2. Understand the evaluation methods for recommender systems					
3. Understand about some of the recent developments in this field					
Expected Course Outcomes:					
On the successful completion of the course, student will be able:					
1	Understand the basics of Recommender systems				K2
2	Understand about the different types of recommender systems				K2, K3
3	Analyze ways to evaluate Recommender Systems and provide explanations				K3, K4
4	Understand a few applications of Recommender Systems				K3
K1 - Remember; K2 - Understand; K3 - Apply; K4 - Analyze; K5 - Evaluate; K6– Create					
Unit:1	Collaborative recommendation				12 hours
Introduction to basic concepts behind recommender systems-Recent developments					
Collaborative recommendation: User-based and item-based nearest neighbour recommendations – Ratings- Further model-based and preprocessing based approaches- Recent practical approaches and systems					
Unit:2	Content-based and Knowledge-based recommendation				12 hours
Content-based recommendation: Content representation and content similarity-Similarity-based retrieval.					
Knowledge based recommendation: Knowledge representation and reasoning, Constraint based recommenders, Case based recommenders.					
Unit:3	Hybrid recommendation and explanations				12 hours
Hybrid recommendation : Opportunities for hybridisation-monolithic, parallelized and pipelined hybridization designs					
Explanations in recommender systems: Explanations in constraint-based, case-based and collaborative filtering recommenders					
Unit:4	Evaluating Recommender System and case study				12 hours
General properties of evaluation research- Popular evaluation designs-Evaluation on historical datasets – Alternate evaluation designs Case study- Personalised game recommendation on the mobile internet					

Unit:5	Recent developments	12 hours
Online consumer decision making: Context, primacy/recency and further effects - Personality and social psychology Recommender systems and the next generation Web: Trust-aware recommender systems-Folksonomies-Ontological filtering-Extracting semantics from the web		
	Total Lecture hours	60 hours
Text Book(s)

Course code	HR Analytics	L	T	P	C
	Elective III	5	-	-	3
Pre-requisite	Fundamentals of Statistics and Data Visualization	Syllabus Version		2025 – 26 onwards	
Course Objectives:					
The main objectives of this course are to:					
1. Understand the fundamentals of HR analytics					
2. Understand the process of recruitment analysis					
Expected Course Outcomes:					
On the successful completion of the course, student will be able:					
1	Understand of the role and importance of HR analytics.			K1, K2	
2	Explain the strategies to track, store, retrieve, analyse and interpret HR data to support decision making.			K2, K3	
3	Apply appropriate software to record, maintain, retrieve and analyse human resources information.			K2, K3,K4	
4	Apply quantitative and qualitative analysis to understand trends and indicators in human resource data.			K2, K3	
5	Demonstrate how to connect HR results to business results.			K4,K5	
K1 - Remember; K2 - Understand; K3 - Apply; K4 - Analyze; K5 - Evaluate; K6– Create					
Unit:1	Introduction to HR Analytics			12 hours	
Evolution of HR Analytics, HR information systems and data sources, HR Metric and HR Analytics, Evolution of HR Analytics; HR Metrics and HR Analytics; Intuition versus analytical thinking; HRMS/HRIS and data sources					
Unit:2	Diversity Analysis			12 hours	
Equality, diversity and inclusion, measuring diversity and inclusion, Testing the impact of diversity, Workforce segmentation and search for critical job roles.					
Unit:3	Recruitment and Selection Analytics			12 hours	
Evaluating Reliability and validity of selection models, finding out selection bias, Predicting the performance and turnover.					
Unit:4	Performance Analysis			12 hours	
Predicting employee performance, training requirements, evaluating training and development, Optimizing selection and promotion decisions					
Unit:5	Monitoring impact of Interventions:			12 hours	
Tracking impact interventions, Evaluating stress levels and value-change. Formulating evidence-based practices and responsible investment. Evaluation mediation process, moderation, and interaction analysis					
	Total Lecture hours			60 hours

Course code	Data Mining	L	T	P	C
	Elective III	5	-	-	3
Pre-requisite	Programming (Python or Java preferred)		Syllabus Version	2025 – 26 onwards	
Course Objectives:					
The main objectives of this course are to:					
1. Understand the fundamentals of data mining and significance of data pre-processing.					
2. Apply appropriate data mining technique on the large dataset for knowledge discovery.					
3. Understand the application of data mining on complex data objects.					
Expected Course Outcomes:					
On the successful completion of the course, student will be able:					
1	Understand data mining primitives and data pre-processing methods.			K2	
2	Apply prediction and association rule mining for real life mining applications.			K3	
3	Apply appropriate Classification techniques for various problems with high dimensional data using modern tools.			K3	
4	Apply appropriate Clustering techniques for various problems with high dimensional data using modern tools.			K3	
5	Synthesize various mining techniques and work in teams to develop project on complex data objects.			K3	
K1 - Remember; K2 - Understand; K3 - Apply; K4 - Analyze; K5 - Evaluate; K6– Create					
Unit:1	DATA MINING FUNDAMENTALS			12 hours	
Data Mining life cycle - KDD Process – Kinds of data can be mined – Kind of data can be mined – Technologies used –Kinds of Applications targeted – Issues in data mining - Data Objects and Attribute Types - Data Pre-processing overview.					
Unit:2	ASSOCIATION AND CORRELATION			12 hours	
Mining Frequent Patterns - Associations and Correlations – Mining Methods – Apriori – FP Growth - Mining various Kinds of Association Rules – Correlation Analysis – Constraint Based Association Mining.					
Unit:3	CLASSIFICATION			12 hours	
Classification Basic Concepts – Decision Tree Induction – Bayesian Classification – Rule Based Classification – Support Vector Machine - Lazy Learners – Other classification methods - Model Evaluation and Selection.					
Unit:4	CLUSTERING AND OUTLIER ANALYSIS			12 hours	
Cluster Analysis – Partitioning Methods - Hierarchical Methods – Density Based Methods – Grid Based Methods – Evaluation of Clustering - Outlier Analysis – Outlier detection Methods.					
Unit:5	MINING COMPLEX DATA				
Time Series and Sequence Mining – Mining graphs and networks – Web Mining – Spatial Mining – Text Mining – Multimedia Mining – Data Mining Applications.				12 hours	
Total Lecture hours				60 hours

Course Code	Big data and Cloud Computing	L	T	P	C
	Elective III	5	-	-	3
Pre - requisite	Knowledge of Operating Systems and Computer Networks	Syllabus version		2025 – 26 onwards	
Course Objectives					
- To provide an overview of an exciting growing field of big data analytics. - To introduce the tools required to manage and analyze big data like Hadoop, Map Reduce and other Hadoop Ecosystems. - Introduction to cloud computing, cloud architecture, cloud service models, Service Oriented Architectures, security in cloud computing, disaster management in clouds.					
Expected Course Outcomes					
1	Identify the components of Hadoop Distributed File System for big data processing			K1, K2	
2	Develop Big Data Solutions using Hadoop Eco System			K1, K4	
3	Identify the architecture and infrastructure of cloud computing, including SaaS, PaaS, IaaS, Maas, public cloud, private cloud, hybrid cloud, etc			K1, K3	
4	Provide the appropriate cloud computing solutions and recommendations according to the applications used			K1, K2	
5	Attempt to generate new ideas and innovations in cloud computing			K1, K2	
K1 – Remember K2 – Understand K3 – apply K4- Analyze K5 – evaluate K6- Create					
UNIT I	Introduction to Big Data			12 Hours	
Classification of digital data – Characteristics of data – Challenges – Five Vs- Typical Hadoop environment- Classification of analytics- Data science – Terminologies used in big data environments- Parallel Vs Distributed Environment-Big data applications, Problems when handling large data – General techniques for handling large data – Case study – Steps in big data – Distributing data storage and processing with Frameworks – Case study					
UNIT II	INTRODUCTION TO HADOOP ECO SYSTEM			12 Hours	
Introduction to Hadoop Eco system- Hadoop core components- Hadoop distributions- HDFS- Common Hadoop Shell commands- Processing data with Hadoop- Name Node- Secondary Name Node, and Data Node - Hadoop Map Reduce paradigm- Map and Reduce tasks, Job, Task trackers - Cluster Setup – SSH & Hadoop Configuration – HDFS Administering –Monitoring & Maintenance.					
UNIT III	HADOOP ECOSYSTEM COMPONENTS			12 Hours	
Pig: Introduction to PIG, Execution Modes of Pig, Comparison of Pig with Databases, Grunt, Pig Latin, User Defined Functions, Data Processing operators, Hive : Hive Shell, Hive Services, Hive Metastore, HiveQL, Tables, Querying Data and User Defined Functions. Base: HBase Concepts, Clients, Example, Zookeeper - Building applications with Zookeeper, Oozie-Workflows of Oozie					

Unit IV	Introduction to Cloud Computing	12 Hours
Defining the Cloud, The Emergence of Cloud Computing, Cloud-Based Services, Grid Computing or Cloud Computing, Components of Cloud Computing, Virtualization, Cloud Computing Deployment Models (Types): Public, Private, Hybrid, Benefits of Using a Cloud Model, Legal Issues in Using Cloud Models, Characteristics of Cloud Computing, Evolution of Cloud Computing, Challenges for the Cloud computing, Grid Computing, Distributed Computing in Grid and Cloud.		
UNIT V	Cloud Service Models	12 Hours
Communication-as-a-Service (CaaS): Advantages of CaaS, Fully Integrated, Enterprise-Class Unified Communications, Infrastructure-as-a-Service (IaaS): Modern On-Demand Computing, Amazon's Elastic Cloud, Amazon EC2 Service Characteristics, Monitoring-as-a-Service (MaaS), Protection Against Internal and External Threats, Platform-as-a-Service (PaaS): The Traditional On-Premises Model, The New Cloud Model, Key Characteristics of PaaS, Software-as-a-Service (SaaS): SaaS Implementation Issues, Key Characteristics of SaaS, Benefits of the SaaS Model, Jericho Cloud Cube Model.
