

B. Sc. HARDWARE SYSTEMS AND NETWORKING

Syllabus

AFFILIATED COLLEGES

Program Code: 26V

2026 – 2027 onwards

BHARATHIAR UNIVERSITY

(A State University, Accredited with “A” Grade by NAAC,
Ranked 13th among Indian Universities by MHRD-NIRF,
World Ranking : Times - 801-1000, Shanghai - 901-1000, URAP - 982)

Coimbatore - 641 046, Tamil Nadu, India

Program Educational Objectives (PEOs)	
The B.Sc. Hardware Systems and Networking program describe accomplishments that graduates are expected to attain within five to seven years after graduation	
PEO1	To enhance the broad knowledge in core area related to computer software and hardware technologies
PEO2	To develop and acquire in-depth knowledge in understanding thoroughly the principles of hardware design in the latest technology
PEO3	To facilitate the graduates to describe and analyze current and relevant advances in computer hardware and software
PEO4	To enrich the learners to develop communication, professional skills and to inculcate team spirit
PEO5	To stimulate the graduates to build awareness on social responsibility , ethical practices and human values in-built in the discipline

Program Specific Outcomes (PSOs)	
After the successful completion of B.Sc. Hardware Systems and Networking program, the students are expected to	
PSO1	To impart education with clear knowledge of the fundamentals and applied aspects of Computer Hardware Systems.
PSO2	Graduates will be able to apply fundamentals of Next-generation systems, Networking devices, in various domains.
PSO3	Ability to engage in life-long learning and adopt fast changing technology to prepare for professional developments
PSO4	Ability to communicate effectively with excellent interpersonal skills and demonstrate the practice of professional ethics for societal benefit
PSO5	Learn latest development and technologies in Hardware and Networking system

Program Outcomes (POs)	
On successful completion of the B.Sc. Hardware Systems and Networking program	
PO1	Disciplinary knowledge: Capable to apply the knowledge of mathematics, algorithmic principles and computing fundamentals in the modeling and design of computer based systems of varying complexity.
PO2	Scientific reasoning/ Problem analysis: Ability to critically analyze, categorizes, formulate and solve the problems that emerges in the field of computer science.
PO3	Problem solving: Able to provide software solutions for complex scientific and business related problems or processes that meet the specified needs with appropriate consideration for the public health and safety and the cultural, societal And environmental considerations.
PO4	Environment and sustainability: Understand the impact of software solutions in environmental and societal context and strive for sustainable development.
PO5	Modern tool usage: Use contemporary techniques, skills and tools necessary for Integrated solutions.
PO6	Ethics: Function effectively with social, cultural and ethical responsibility as an individual or as a team member with positive attitude.
PO7	Cooperation / Team Work: Function effectively as member or leader on Multidisciplinary teams to accomplish a common objective.
PO8	Communication Skills: An ability to communicate effectively with diverse Types of audience and also able to prepare and present technical documents to different groups.
PO9	Self-directed and Life-long Learning: Graduates will recognize the need for self-motivation to engage in lifelong learning to be in par with changing Technology.
PO10	Enhance the research culture and uphold the scientific integrity and objectivity

BHARATHIAR UNIVERSITY::COIMBATORE 641 046

B. Sc. Hardware Systems and Networking (CBCS PATTERN)

(For the students admitted from the academic year 2026-2027 and onwards)

Scheme of Examination

Part	Title of the Course	Hours/ Week	Examination				Credits
			Duration in Hours	Maximum Marks			
				CIA	CEE	Total	
	Semester I						
I	Language - I	6	3	25	75	100	4
II	English - I	4	3	25	75	100	4
III	Core 1: Programming Concepts in C	5	3	25	75	100	4
III	Core 2: Computer Architecture	5	3	25	75	100	4
III	Core Lab 1: Programming Lab – C	4	3	20	30	50	2
III	Allied 1: Mathematical Structures for Computer Science	4	3	25	75	100	4
IV	Environmental Studies*	2	3	-	50	50	2
	Total	30		145	455	600	24
	Semester II						
I	Language – II	6	3	25	75	100	4
II	English – II	4	3	25	25	50	2
III	Core 3: C++ Programming	6	3	25	75	100	4
III	Core Lab 2: Programming Lab – C++	5	3	20	30	50	2
III	Core Lab 3: Office Automation and Internet	3	3	20	30	50	2
III	Allied 2: Discrete Mathematics	4	3	25	75	100	4
IV	Value Education – Human Rights*	2	3	-	50	50	2
IV	Naan Mudhalvan Skill Course ***			25	25	50	2
	Total	30		165	385	550	22
	Semester III						
I	Language – III	6	3	25	75	100	4
II	English – III	4	3	25	75	100	4
III	Core 4: Data Structures	4	3	25	75	100	4
III	Core 5: Fundamentals of Microprocessor	5	3	25	75	100	4
III	Core Lab 4: PC Assembling Lab	3	3	20	30	50	2
III	Allied 3: Embedded Systems	4	3	25	75	100	4
III	Skill Based Subject 1 : Software Project Management	3	3	25	25	50	2
IV	Tamil @/ Advanced Tamil (OR) Non-major elective-1 (Yoga for Human Excellence)*/ Women’s Rights*	1	3	-	50	50	1
IV	Naan Mudhalvan Course ***			25	25	50	2
IV	Health and Wellness**		-	100	-	100	1
	Total	30		295	505	800	28

Semester IV							
I	Language – IV	6	3	25	75	100	4
II	English – IV	4	3	25	75	100	4
III	Core 6: Operating System	4	3	25	75	100	4
III	Core 7: Computer Storage Devices	4	3	25	75	100	4
III	Core Lab 5: Fundamentals of Microprocessor Lab	3	3	20	30	50	2
III	Allied 4: Internet of Things (IoT)	4	3	25	75	100	4
III	Skill Based Subject 2 (lab) : Software Project Management Lab	3	3	20	30	50	2
IV	Tamil @/ Advanced Tamil (OR) Non-major elective-II(General Awareness) #	1	3	-	50	50	1
IV	Disaster Management****	1	-	50	-	50	1
IV	Naan Mudhalvan Skill Course ***		3	25	25	50	2
	Total	30		190	510	700	28
Semester V							
III	Core 8: Network Security and Cryptography	6	3	25	75	100	4
III	Core 9: Software Testing	6	3	25	75	100	4
III	Core Lab 6: Computer Hardware Maintenance	6	3	20	30	50	2
III	Elective-I : Computer Networks/ Organization Behaviour / CASE Tools Concepts and Applications	6	3	25	75	100	3
III	Skill Based Subject 3: Server Administration	3	3	25	25	50	2
III	Core Lab - VII : Capstone Project Work Lab *****	3	3	20	30	50	2
IV	Naan Mudhalvan Course ***		3	25	25	50	2
	Total	30		165	335	500	19
Semester VI							
III	Core 10: Web Technology	6	3	25	75	100	4
III	Core 11: Mastering LAN and Troubleshooting	6	3	25	75	100	4
III	Core Lab 7: Web Technology Lab	3	3	20	30	50	2
III	Core 12: Project Work Lab	6	-	25	75	100	3
III	Elective-II : Graphics and Multimedia// Business Intelligence / Machine Learning	6	3	25	75	100	3
III	Skill based Subject 4 (lab) : Server Administration Lab	3	3	20	30	50	2
V	Extension Activities**	-	-	50	-	50	2
	Naan Mudhalvan Courses***		3	25	25	50	2
	Total	30		215	385	600	22
	Grand Total	180		1175	2575	3750	143

Note

*	No Continuous Internal Assessment (CIA), University Examinations Only.
**	No University Examinations, Continuous Internal Assessment (CIA) Only.
***	Naan Mudhalvan – Skill courses- external marks (CEE) will be assessed by industry and internal will be offered by respective course teacher.
****	No University Examinations, Continuous Internal Assessment (CIA) Only will be handled by Department of Physical Education (PD)
*****	Summer Internship / Industrial Training during the Summer Vacation in II Year, IV Semester for 30 hours. The capstone project report to be prepared and it should be submitted during viva-voce. (Refer Project Guidelines)

First Semester

Course code		Programming Concepts in C	L	T	P	C
Core/Elective/Supportive		Core Paper: 1	5	0	0	4
Pre-requisite		Students should have basic Computer Knowledge	Syllabus Version		2025-26 Onwards	
Course Objectives:						
The main objectives of this course are to:						
1. To impart knowledge about Computer fundamentals						
2. To understand the concepts and techniques in C Programming						
3. To equip and indulge themselves in problem solving using C						
Expected Course Outcomes:						
On the successful completion of the course, student will be able to:						
1	Learn about the Computer fundamentals and the Problem solving					K2
2	Understand the basic concepts of C programming					K2
3	Describe the reason why different decision making and loop constructs are available for iteration in C					K3
4	Demonstrate the concept of User defined functions , Recursions , Scope and Lifetime of Variables, Structures and Unions					K4
5	Develop C programs using pointers Arrays and file management					K3
K1 - Remember; K2 - Understand; K3 - Apply; K4 - Analyze; K5 - Evaluate; K6 - Create						
Unit:1 Fundamentals of Computers & Problem Solving in C 12 hours						
Fundamentals of Computers : Introduction – History of Computers-Generations of Computers-Classification of Computers-Basic Anatomy of a Computer System-Input Devices-Processor-Output Devices-Memory Management – Types of Software- Overview of Operating System-Programming Languages-Translator Programs-Problem Solving Techniques - Overview of C.						
Unit:2 Overview of C 15 hours						
Overview of C - Introduction - Character set - C tokens - keyword & Identifiers - Constants - Variables - Data types - Declaration of variables - Assigning values to variables - Defining Symbolic Constants - Arithmetic, Relational, Logical, Assignment, Conditional, Bitwise, Special, Increment and Decrement operators - Arithmetic Expressions - Evaluation of expression - precedence of arithmetic operators - Type conversion in expression – operator precedence & associativity - Mathematical functions - Reading & Writing a character - Formatted input and output.						
Unit:3 Decision Making , Looping and Arrays 15 hours						
Decision Making and Branching: Introduction – if, if...else, nesting of if ...else statements- else if ladder – The switch statement, The ?: Operator – The goto Statement. Decision Making and Looping: Introduction- The while statement- the do statement – the for statement-jumps in loops. Arrays – Character Arrays and Strings						
Unit:4 User-Defined Functions, Structures and Unions 15 hours						
User-Defined Functions: Introduction – Need and Elements of User-Defined Functions-Definition-Return Values and their types - Function Calls – Declarations – Category of Functions- Nesting of Functions - Recursion – Passing Arrays and Strings to Functions - The						

Scope, Visibility and Lifetime of Variables- Multi file Programs. Structures and Unions		
Unit:5	Pointers & File Management	15 hours
Pointers: Introduction-Understanding pointers -Accessing the address of a variable Declaration and Initialization of pointer Variable – Accessing a variable through its pointer Chain of pointers- Pointer Expressions – Pointer Increments and Scale factor- Pointers and Arrays- Pointers and Strings – Array of pointers – Pointers as Function Arguments Functions returning pointers – Pointers to Functions – Pointers and Structures. File Management in C.		
Unit:6	Contemporary Issues	3 hours
Problem Solving through C Programming - Edureka		
	Total Lecture hours	75 hours
Text Book(s)		
1	E Balagurusamy: Computing Fundamentals & C Programming – Tata McGraw-Hill, Second Reprint 2008	
Reference Books		
1	Ashok N Kamthane: Programming with ANSI and Turbo C, Pearson, 2002.

Course code		Computer Architecture	L	T	P	C
Core/Elective/Supportive		Core Paper : 2	5	0	-	4
Pre-requisite		Student should have basic computer knowledge	Syllabus Version		2025-26 Onwards	
Course Objectives:						
On successful completion of this subject the students should have Knowledge on						
1. To familiarize with different number systems and digital arithmetic & logic circuits						
2. To understand the concepts of Combinational Logic and Sequential Circuits						
3. To impart the knowledge of buses, I/O devices, flip flops, Memory and bus structure.						
4. To understand the concepts of memory hierarchy and memory organization						
5. To understand the various types of microprocessor architecture						
Expected Course Outcomes:						
On the successful completion of the course, student will be able to:						
1	Learn the basic structure of number system methods like binary, octal and Hexadecimal and understand the arithmetic and logical operations are performed By computers.					K3
2	Define the functions to simplify the Boolean equations using logic gates.					K1
3	Understand various data transfer techniques in digital computer and control unit operations.					K2
4	Compare the functions of the memory organization					K4
5	Analyze architectures and computational designs concepts related to architecture organization and addressing modes					K4
K1 - Remember; K2 - Understand; K3 - Apply; K4 - Analyze; K5 - Evaluate; K6 – Create						
Unit:1						
Micro Computer System and its types			13 hours			
Microcomputer System: Introduction-Hardware and Software-Memory-ALU-Control Unit-Input and Output Techniques-Advanced System Concepts-Micro Computer Types-Multitasking and Multiprogramming.						
Unit:2						
Peripheral Devices			15 hours			
Peripheral Devices: Keyboard and Mouse-CRT-Printer-Printer Types-Magnetic Storage Devices-Hard disk drive-DVD-CDROM-Scanner-Modem-Speakers.						
Unit:3						
Micro programmed Control and addressing Modes			15 hours			
Micro programmed Control: Control Memory-Addressing Sequence-Design of Control Unit. CPU: General Register Organization-Stack Organization-Instruction Format-Addressing Modes-RISC-Program Control.						
Unit:4						
PC Hardware Overview			15 hours			
PC Hardware Overview: BIOS-Power Connector-Inside the System Box-SMPS-Motherboard-PC Expansion Boards-Front Panel Indicator-Serial Interface-Floppy Disk Controller-Hard Disk Controller-Post Sequence.						
Unit:5						
Microprocessor and its types			15 hours			
Microprocessor: Types-Processor Modes-Features-Manufacturing-Sockets-Heat and Cooling Problems-Math Coprocessors-Processor Bugs-Processor Upgrades.						

Unit:6	Contemporary Issues	2 hours
Expert lectures, online seminars – webinars

Course code		Programming Lab – C	L	T	P	C
Core/Elective/Supportive		Core Lab: 1	0	0	4	2
Pre-requisite		Students should have basic knowledge in C programming and algorithms	Syllabus Version		2025-26 Onwards	
Course Objectives:						
The main objectives of this course are to:						
1. To practice the Basic concepts, Branching and Looping Statements and Strings in C programming						
2. To implement and gain knowledge in Arrays, functions, Structures, Pointers and File Handling						
Expected Course Outcomes:						
On the successful completion of the course, student will be able to:						
1	Remember and Understand the logic for a given problem and to generate Prime numbers & Fibonacci Series (Program-1,2,3)					K1, K2
2	Apply the concepts to print the Magic square, Sorting the data , Strings, Recursive functions and Pointers (Program-4,5,6,8,10)					K2, K3
3	Remember the logic used in counting the vowels in a sentence (Program-7)					K1
4	Apply and Analyze the concepts of Structures and File management (Program-9,11,12)					K3&K4
K1 - Remember; K2 - Understand; K3 - Apply; K4 - Analyze; K5 - Evaluate; K6 – Create						
Programs			36 hours			
1. Write a C program to find the sum, average, standard deviation for a given set of numbers.						
2. Write a C program to generate n prime numbers.						
3. Write a C program to generate Fibonacci series.						
4. Write a C program to print magic square of order n where n > 3 and n is odd.						
5. Write a C program to sort the given set of numbers in ascending order.						
6. Write a C program to check whether the given string is a palindrome or not using pointers.						
7. Write a C program to count the number of Vowels in the given sentence.						
8. Write a C program to find the factorial of a given number using recursive function.						
9. Write a C program to print the students Mark sheet assuming roll no, name, and marks in 5 subjects in a structure. Create an array of structures and print the mark sheet in the university pattern.						
10. Write a function using pointers to add two matrices and to return the resultant matrix to the calling function.						
11. Write a C program which receives two filenames as arguments and check whether the file contents are same or not. If same delete the second file						
12. Write a program which takes a file as command line argument and copy it to another file. At the end of the second file write the total i) no of chars ii) no. of words and iii) no. of lines.

Second Semester

Course code		C++ PROGRAMMING	L	T	P	C
Core/Elective/Supportive		Core: 3	6	0	0	4
Pre-requisite	Before starting this course one should have a basic understanding of computer programs and computer programming language. If you know the concepts of C programming it will be much easier to understand this course		Syllabus Version		2025-26 Onwards	
Course Objectives:						
The main objectives of this course are to:						
1. Impart knowledge of object oriented programming concepts and implement them in C++						
2. Enable to differentiate procedure oriented and object-oriented concepts.						
3. Equip with the knowledge of concept of Inheritance so that learner understands the need of inheritance.						
4. Explain the importance of data hiding in object oriented programming						
Expected Course Outcomes:						
On the successful completion of the course, student will be able to:						
1	Define the different programming paradigm such as procedure oriented and object oriented programming methodology and conceptualize elements of OO Methodology					K1
2	Illustrate and model real world objects and map it into programming objects for a legacy system.					K2
3	Identify the concepts of inheritance and its types and develop applications using overloading features.					K3
4	Discover the usage of pointers with classes					K4
5	Explain the usage of Files, templates and understand the importance of exception Handling					K5
K1 - Remember; K2 - Understand; K3 - Apply; K4 - Analyze; K5 - Evaluate; K6 - Create						
Unit:1						
INTRODUCTION TO C++			18 hours			
Key concepts of Object-Oriented Programming –Advantages – Object Oriented Languages – I/O in C++ - C++ Declarations. Control Structures: - Decision Making and Statements: If.. Else, jump, goto, break, continue, Switch case statements - Loops in C++: for, while, do - functions in C++ - inline functions – Function Overloading..						
Unit:2						
CLASSES AND OBJECTS			18 hours			
Declaring Objects – Defining Member Functions – Static Member variables and functions – array of objects –friend functions – Overloading member functions – Bit fields and classes – Constructor and destructor with static members.						
Unit:3						
OPERATOR OVERLOADING			18 hours			
Overloading unary, binary operators – Overloading Friend functions – type conversion – Inheritance: Types of Inheritance – Single, Multilevel, Multiple, Hierarchal, Hybrid, Multi path inheritance – Virtual base Classes – Abstract Classes.						
Unit:4						
POINTERS			18 hours			
Declaration – Pointer to Class , Object – this pointer – Pointers to derived classes and Base classes – Arrays – Characteristics – array of classes – Memory models – new and delete operators – dynamic object – Binding, Polymorphism and Virtual Functions.						

Unit:5		FILES	15 hours
File stream classes – file modes – Sequential Read / Write operations – Binary and ASCII Files – Random Access Operation – Templates – Exception Handling - String – Declaring and Initializing string objects – String Attributes – Miscellaneous functions .			
Unit:6		Contemporary Issues	3 hours
Expert lectures, online seminars – webinars			
		Total Lecture hours	90 hours

Course code		PROGRAMMING LAB - C++	L	T	P	C
Core/Elective/Supportive		Core Lab : 2	0	0	5	2
Pre-requisite		Basic understanding of computer programs and computer programming language like C.	Syllabus Version		2025-26 Onwards	
Course Objectives:						
The main objectives of this course are to:						
1. Impart knowledge of object oriented programming concepts and implement them in C++						
2. Enable to differentiate procedure oriented and object-oriented concepts.						
3. Equip with the knowledge of concept of Inheritance so that learner understands the need of inheritance.						
4. Explain the importance of data hiding in object oriented programming						
Expected Course Outcomes:						
On the successful completion of the course, student will be able to:						
1	Define the different programming paradigm such as procedure oriented and object oriented programming methodology and conceptualize elements of OO methodology					K1
2	Illustrate and model real world objects and map it into programming objects for a legacy system.					K2
3	Identify the concepts of inheritance and its types and develop applications using overloading features.					K3
4	Discover the usage of pointers with classes					K4
5	Explain the usage of Files, templates and understand the importance of exception Handling					K5
K1 - Remember; K2 - Understand; K3 - Apply; K4 - Analyze; K5 - Evaluate; K6 - Create						
Programs						
1. Write a C++ Program to create a class to implement the data structure STACK. Write a constructor to initialize the TOP of the STACK. Write a member function PUSH() to insert an element and member function POP() to delete an element check for overflow and underflow conditions..						
2. Write a C++ Program to create a class ARITHMETIC which consists of a FLOAT and an INTEGER variable. Write member functions ADD (), SUB(), MUL(), DIV() to perform addition, subtraction, multiplication, division respectively. Write a member function to get and display values.						
3. Write a C++ Program to read an integer number and find the sum of all the digits until it reduces to a single digit using constructors, destructors and inline member functions.						
4. Write a C++ Program to create a class FLOAT that contains one float data member. Overload all the four Arithmetic operators so that they operate on the object FLOAT						
5. Write a C++ Program to create a class STRING. Write a Member Function to initialize, get and display stings. Overload the operators ++ and == to concatenate two Strings and to compare two strings respectively.						
6. Write a C++ Program to create class, which consists of EMPLOYEE Detail like E_Number, E_Name, Department, Basic, Salary, Grade. Write a member function to get and display them. Derive a class PAY from the above class and write a member function to calculate DA, HRA and PF depending on the grade.						
7. Write a C++ Program to create a class SHAPE which consists of two VIRTUAL FUNCTIONS Calculate_Area() and Calculate_Perimeter() to calculate area and perimeter of various figures. Derive three classes SQUARE, RECTANGLE, TRIANGE from class Shape and Calculate Area and Perimeter of each class separately and display the result.						
8. Write a C++ Program to create two classes each class consists of two private variables, a integer and a float variable. Write member functions to get and display them. Write a FRIEND Function common to both classes, which takes the object of above two classes as arguments and the integer and float values of both objects separately and display the result.						

9.	Write a C++ Program using Function Overloading to read two Matrices of different Data Types such as integers and floating point numbers. Find out the sum of the above two matrices separately and display the sum of these arrays individually.
10.	Write a C++ Program to check whether the given string is a palindrome or not using Pointers
11.	Write a C++ Program to create a File and to display the contents of that file with line numbers.
12.	Write a C++ Program to merge two files into a single file.

Course code		Office Automation and Internet	L	T	P	C
Core/Elective/Supportive		Core Lab : III	0	0	3	2
Pre-requisite		Basic Knowledge of Office Automation Tools	Syllabus Version		2025-26 Onwards	
Course Objectives:						
The main objectives of this course are to:						
1. Acquire and apply the computer applications in different aspects.						
2. Get an insight knowledge on office automation.						
3. Know the database maintenance in every type of applications.						
4. Get the knowledge in effective power point presentation.						
5. Impart knowledge and essential skills necessary to use the internet.						
Expected Course Outcomes:						
On the successful completion of the course, student will be able to:						
1	Understand the fundamentals of Internet and the Web concepts					K2
2	Create and apply various statistical tools available in excel.					K3,K6
3	To gain knowledge making effective presentation using power point presentation					K4
4	Understand the basic concepts and evaluate the database using excel.					K5
K1 - Remember; K2 - Understand; K3 - Apply; K4 - Analyze; K5 - Evaluate; K6 - Create						
Programs				36 hours		
1. Prepare your resume in word and assume that you are studying in final year of your graduation and are eagerly looking for a job. Visit any job portal and upload your resume.						
2. Create a flowchart for any program use proper shapes like ellipse, arrows, rectangle, parallelogram and grouping to group all the parts of the flowchart into one single object.						
3. Create a simple mathematical calculations using formulas in excel sheet.						
4. Prepare students mark list for your class and calculate Total, Average, Result and Ranking by using arithmetic, logical functions and sorting using excel sheet.						
5. Create different types of charts for a range in students mark list using excel sheet.						
6. Create a power-point presentation with minimum 10 slides The first slide must contain the topic of the presentation and name of the presentation. a. At least one table,5 bullets,5 numbers, font size, font face, font color. b. Use word art to write the heading for each slides. Insert at least one clip-art, one picture, one audio and one video. c. Use custom animation option to animate the text, move left to right one line at a time and Use proper transition for the slides. d. Last slide must contain thank you.						
7. Open your inbox in the Gmail account created, check the mail received from your peer from other college inviting you for his college fest, and download the invitation. Reply to the mail with a thank you note for the invite and forward the mail to other friends.						
8. Create your own Google classroom and invite all your friends through email id. Post study material in Google classroom using Google drive. Create a separate folder for every subject and upload all unit wise E-Content Materials.						
9. Create and share a folder in Google Drive using ‘share a link’ option and set the permission to access that folder by your friends only.						
10. Create poster for Department Seminar or Conference using any open source tools.

Third Semester

Course code		Data Structures	L	T	P	C
Core/Elective/Supportive		Core: 4	4	0	0	4
Pre-requisite		Basic understanding of Data storage, retrieval and algorithms.	Syllabus Version		2025-26 Onwards	
Course Objectives:						
The main objectives of this course are to:						
1. To introduce the fundamental concept of data structures						
2. To emphasize the importance of data structures in developing and implementing efficient algorithms.						
3. Understand the need for Data Structures when building application						
4. Ability to calculate and measure efficiency of code						
5. Improve programming logic skills.						
Expected Course Outcomes:						
On the successful completion of the course, student will be able to:						
1	Understand the basic concepts of data structures and algorithms					K1-K2
2	Construct and analyze of stack and queue operations with illustrations					K2-K4
3	Enhance the knowledge of Linked List and dynamic storage management.					K2-K3
4	Demonstrate the concept of trees and its applications					K2-K3
5	Design and implement various sorting and searching algorithms for applications and understand the concept of file organizations					K1-K4
K1 - Remember; K2 - Understand; K3 - Apply; K4 - Analyze; K5 - Evaluate; K6 - Create						
Unit:1						
		INTRODUCTION	12 hours			
Introduction of Algorithms, Analysing Algorithms. Arrays: Sparse Matrices - Representation of Arrays. Stacks and Queues. Fundamentals - Evaluation of Expression Infix to Postfix Conversion - Multiple Stacks and Queues						
Unit:2						
		LINKED LIST	12 hours			
Linked List: Singly Linked List - Linked Stacks and Queues - Polynomial Addition- More on Linked Lists - Sparse Matrices - Doubly Linked List and Dynamic – Storage Management - Garbage Collection and Compaction.						
Unit:3						
		TREES	12 hours			
Basic Terminology - Binary Trees - Binary Tree Representations – Binary Trees-Traversal-More On Binary Trees – Threaded Binary Trees - Binary Tree. Representation of Trees - Counting Binary Trees. Graphs: Terminology and Representations-Traversals, Connected Components and Spanning Trees, Shortest Paths and Transitive Closure						
Unit:4						
		EXTERNAL SORTING	12 hours			
Storage Devices -Sorting with Disks: K-Way Merging – Sorting with Tapes Symbol Tables: Static Tree Tables - Dynamic Tree Tables - Hash Tables: Hashing Functions - Overflow Handling.						
Unit:5						
		INTERNAL SORTING	11 hours			
Insertion Sort - Quick Sort - 2 Way Merge Sort - Heap Sort – Shell Sort - Sorting on Several Keys. Files: Files, Queries and Sequential organizations – Index Techniques -File Organizations.						
Unit:6						
		Contemporary Issues	1 hour			
Expert lectures, online seminars - webinars						
		Total Lecture hours	60 hours

Course code		FUNDAMENTALS OF MICROPROCESSOR	L	T	P	C
Core/Elective/Supportive		Core: 5	5	0	0	4
Pre-requisite		The objective of the course is to train the students to basic structure of a processor - arithmetic registers, address registers, basic addressing modes	Syllabus Version		2025-26 Onwards	
Course Objectives:						
The main objectives of this course are to:						
1. To expose the students with the basic structure of a processor						
2. The concepts of addressing modes						
Expected Course Outcomes:						
On the successful completion of the course, student will be able to:						
1	The competence and the development of small to medium sized application programs that demonstrate professionally acceptable coding					K1-K2
2	Demonstrate the concept of microprocessor					K2-K4
3	Apply the concept of data transfer					K3
4	Develop CPU I/O Communication					K3
5	Understand the fundamental concepts of RISC and CISC					K1-K2
K1 - Remember; K2 - Understand; K3 - Apply; K4 - Analyze; K5 - Evaluate; K6 - Create						
Unit:1						
		MICROPROCESSOR	15 hours			
Introduction of Microprocessor , Block Diagram of Micro Computer , Block Diagram of CPU with system Bus -Architecture–Bus Organization– Bus Organization in Microprocessor , Pin Detail , Diagram of Microprocessor , Data & Address deviation , Generate Control Signal in Microprocessor , Detail of Microprocessor Functional diagram and pin out diagram of 8085						
Unit:2						
		ADDRESSING MODES OF 8085	15 hours			
Addressing modes of 8085 – Direct addressing Mode-Indirect Addressing Mode – Data Transfer - Instruction set of 8085 – simple programs						
Unit:3						
		I/O SCHEMES AND MEMORY ACCESS	15 hours			
I/O Schemes – Peripherals and Interfaces .Input – Output Organization: Input – output interface – I/O Bus and Interface – I/O Bus Versus Memory Bus – Isolated Versus Memory – Mapped I/O – Example of I/O Interface. Asynchronous data transfer: Strobe Control and Handshaking – Priority Interrupt: Daisy-Chaining Priority, Parallel Priority Interrupt. Direct Memory Access: DMA Controller, DMA Transfer. Input – OutputProcessor: CPU-IOP Communication.						
Unit:4						
		MEMORY ORGANIZATION	15 hours			
Memory Organization: Memory Hierarchy – Main Memory- Associative memory: Hardware Organization, Match Logic, Read Operation, Write Operation. Cache Memory: Associative, Direct, Set associative Mapping – Writing Into Cache Initialization. Virtual Memory: Address Space and Memory Space, Address Mapping Using Pages, Associative Memory Page Table, Page Replacement.						
Unit:5						
		INTRODUCTION TO 8086	14 hours			
Introduction to 8086: Pin out diagram -Functional Block diagram of 8086 – Architecture-instruction set-comparison with 8085 & 8086 :Interfacing IC –RISC & CISC						

Unit:6		Contemporary Issues	1 hour
Expert lectures, online seminars - webinars			
		Total Lecture hours	75 hours
Text Book(s)			
1	Microprocessor Architecture programming & application with 8085 & 8080 – by Ramesh.s.Gaonkar –Wiley eastern.		
2	Introduction to microprocessors – Adithya.P.Mathus – TMHPublication.		
3	Microprocessor interfaces – Douglas Hall – MC Graw Hill.

Course code		PC ASSEMBLING LAB	L	T	P	C
Core/Elective/Supportive		Core Lab: 4	0	0	3	2
Pre-requisite	Students should know about the system parts or system components		Syllabus Version		2025-26 Onwards	
Course Objectives:						
The main objectives of this course are to:						
1. The main objective of PC Assembling Lab is to provide the students a strong foundation on PC Assembling concepts and its applications through hands-on training.						
2. To practice the Basic concepts, SMPS , Processor and Memory						
3. To implement and gain knowledge in Windows OS Installation with FDiSK handling						
Expected Course Outcomes:						
On the successful completion of the course, student will be able to:						
1	Understand the basic concepts of Windows files & Folders					K1, K2
2	Demonstrate the CMOS Setup and safely open the system case					K2
3	Add / remove floppy and hard drive					K2, K3
4	Develop and Demonstrate fdisk					K2,K3
5	Construct trouble shooting hardware problems					K3
K1 - Remember; K2 - Understand; K3 - Apply; K4 - Analyze; K5 - Evaluate; K6 - Create						
Programs			36 hours			
1. Start Up, Navigate, and Shut Down a Windows System						
2. Use Files and Folders						
3. CMOS Setup						
4. Safely Open the Case to Identify Components						
5. Collect Resource Information – Windows 98,XP,Windows 2000						
6. Replace s Floppy Drive						
7. Replace the Hard Drive						
8. Add a Slave Drive						
9. Install a Windows Mouse						
10. Partition a Hard Drive – FAT32						
11. Partition a Hard Drive – Two Partitions-using FDISK						
12. Partition HDD-NTFS(Win XP)						
13. Disk Management (Hard Disk)						
14. Replace a Power Supply						
15. Remove and Insert Memory						
16. Remove and Replace a Motherboard						
17. Troubleshoot Hardware Problems						
18. Dual boot Windows XP and Windows 2000

Course code		EMBEDDED SYSTEMS	L	T	P	C
Core/Elective/Supportive		Allied : 3	4	0	0	4
Pre-requisite		Basic knowledge in devices and programming skills in C and C++	Syllabus Version		2025-26 Onwards	
Course Objectives:						
The main objectives of this course are to: 1. To enable the students to learn embedded system concepts and to develop embedded real time applications. 2. To learn the embedded programming in C and C++ to develop applications. 3. To study the embedded programming modeling in single and multiprocessor systems.						
Expected Course Outcomes:						
On the successful completion of the course, student will be able to:						
1	Understand and remember the basic concepts in embedded system and memory organization, DMA.					K1,K2
2	Understand the devices, buses for device networks, serial and parallel port device drivers, interrupt servicing mechanism.					K2,K3
3	Understand the embedded programming concepts in C and C++, apply to develop embedded application.					K3
4	Knowledge on programming in single and multiprocessor system.					K4
5	Knowledge in Inter-Process Communication and synchronization of processes, tasks and threads.					K4
K1 - Remember; K2 - Understand; K3 - Apply; K4 - Analyze; K5 - Evaluate; K6 - Create						
Unit:1	INTRODUCTION TO EMBEDDED SYSTEM				12 hours	
Introduction to Embedded System: An Embedded System – Processor in the System – Other Hardware units – Software embedded into a system – Exemplary embedded system – Embedded system on chip and in VLSI circuit. Processor and Memory organization: Structural units in a processor – Processor selection – Memory devices – Memory selection - Allocation of memory – DMA – Interfacing processor, memories and I/O devices						
Unit:2	DEVICES AND BUSES FOR DEVICE NETWORKS				12 hours	
Devices and buses for device networks: I/O devices – Timer and counting devices – Serial communication – Host system. Device drivers and Interrupts servicing mechanism: Device drivers – Parallel port device drivers – Serial port device drivers – Device drivers for IPTD – Interrupt servicing mechanism – Context and the periods for context-switching, deadline and interrupt latency						
Unit:3	PROGRAMMING CONCEPTS AND EMBEDDED PROGRAMMING IN C AND C++				12 hours	
Programming concepts and embedded programming in C and C++: Software programming in ALP and C – C program elements – Header and source files and processor directives – Macros and functions – Data types – Data structures – Modifiers – Statements – Loops and pointers – Queues – Stacks – Lists and ordered lists – Embedded programming in C++ - Java – C program compiler and cross compiler – Source code for engineering tools for embedded C / C++ - Optimization of memory needs						

Unit:4	PROGRAM MODELING CONCEPTS IN SINGLE AND MULTI PROCESSOR SYSTEMS	12 hours
Program modeling concepts in single and multi processor systems: Modeling process for software analysis before software implementation – Programming models for event controlled or response time constrained real time programs – Modeling of multiprocessor systems. Software engineering practices: Software algorithm complexity – Software development process life cycle and its models – Software analysis – Software design – Implementation – Testing, Validation and debugging – Software maintenance		
Unit:5	INTER-PROCESS COMMUNICATION AND SYNCHRONIZATION OF PROCESSES, TASKS AND THREADS	12 hours
Inter-process communication and synchronization of processes, tasks and threads: Multiple processor – Problem of sharing data by multiple tasks and routines – Inter process communication. Real time operating systems: Operating system services – I/O subsystem – Network operating systems – Real time and embedded operating systems – Interrupt routine in RTOS environment – RTOS task scheduling – Performance metric in scheduling.		
	Total Lecture hours	60 hours

Course code		SOFTWARE PROJECT MANAGEMENT	L	T	P	C
Core/Elective/Supportive	Skill based Subject : 1		3	0	0	3
Pre-requisite	Basic knowledge on the Software Development Life Cycle.		Syllabus Version		2025-26 Onwards	
Course Objectives:						
The main objectives of this course are to: 1. To enhance the basic software engineering methods and practices. 2. To learn the techniques for developing software systems. 3. To understand the object oriented design. 4. To understand software testing approaches						
Expected Course Outcomes:						
On the successful completion of the course, student will be able to:						
1	Understand the basic concepts of software engineering					K1
2	Apply the software engineering models in developing software applications					K2-K3
3	Implement the object oriented design in various projects					K4
4	Knowledge on how to do a software project with in-depth analysis.					K3
5	To inculcate knowledge on Software engineering concepts in turn gives a roadmap to design a new software project.					K1-K4
K1 - Remember; K2 - Understand; K3 - Apply; K4 - Analyze; K5 - Evaluate; K6 - Create						
Unit:1	SOFTWARE ENGINEERING				9 hours	
Software Engineering: A Layered Technology – Software Process – Software Process Models – The Prototyping. Requirement Engineering– Software prototyping - Elements of analysis model – Data modeling – Functional modeling and information flow.						
Unit:2	SOFTWARE DESIGN				9 hours	
Software design and Software engineering – The Design process – Design principles – Design concepts – Effective modular design –Software Architecture						
Unit:3	SOFTWARE TESTING				9 hours	
Software testing fundamentals – Test Case Design - White box testing – Basis path testing – Control structure testing – Black box testing. Unit testing – Validation testing – System testing.						
Unit:4	SOFTWARE CONFIGURATION MANAGEMENT				9 hours	
Software Configuration Management: Definitions and terminology – processes and activities. Software Quality assurance: Definitions – Quality control and Quality assurance – Organization of Structures. Risk Management: Risk Identification – quantification - Monitoring - Mitigation. Software requirements gathering: Steps to be followed – Outputs and Quality Records - Skill sets required – Challenges						
Unit:5	ESTIMATION				8 hours	
Estimation: What is Estimation? – When and Why? – Three phases of Estimation – Estimation methodology – Formal models of Size Estimation. Design and Development phases: Reusability - Technology choices – Standards – Portability -User interface issues – Testability - The Effect of Internet on Project Management.						
Unit:6	Contemporary Issues				1 hour	
Expert lectures, online seminars - webinars						
Total Lecture hours				45 hours

Fourth Semester

Course code		Operating Systems	L	T	P	C
Core/Elective/Supportive	Core Paper: VI		4	0	0	4
Pre-requisite	Students Should have the basic knowledge in computer.		Syllabus Version	2025-26 Onwards		
Course Objectives:						
The main objectives of this course are to: 1. To understand the processing of programs on a computer system to design and implementation of language processor. 2. To enhance the ability of program generation through expansion and gain knowledge about Code optimization using software tools. 3. Students will gain knowledge of basic operating system concepts. 4. To have an in-depth understanding of process concepts, deadlock and memory management. 5. To provide an exposure to scheduling algorithms, devices and information management.						
Expected Course Outcomes:						
On the successful completion of the course, student will be able to:						
1	Know the program generation and program execution activities in detail					K1
2	Understand the concepts of Macro Expansions and Gain the knowledge of Editing processes					K2-K3
3	Remember the basic concepts of operating system					K1
4	Understand the concepts like interrupts, deadlock , memory management and file management					K2
5	Analyze the need for scheduling algorithms and implement different algorithms used for representation, scheduling, and allocation in DOS and UNIX operating system.					K1-K4
K1 - Remember; K2 - Understand; K3 - Apply; K4 - Analyze; K5 - Evaluate; K6 - Create						
Unit:1						
OPERATING SYSTEM			12 hours			
Introduction - Mainframe systems – Desktop Systems – Multiprocessor Systems – Distributed Systems – Clustered Systems – Real Time Systems – Handheld Systems - Hardware Protection - System Components – Operating System Services – System Calls – System Programs						
Unit:2						
PROCESS AND THREADS			12 hours			
Process Concept – Process Scheduling – Operations on Processes – Cooperating Processes – Inter-process Communication. Threads – Overview – Threading issues - CPU Scheduling – Basic Concepts – Scheduling Criteria – Scheduling Algorithms – Multiple-Processor Scheduling – Real Time Scheduling						
Unit:3						
SYNCHRONIZATION AND DEADLOCK			12 hours			
The Critical-Section Problem – Synchronization Hardware – Semaphores – Classic problems of Synchronization – Deadlock Characterization – Methods for handling Deadlocks -Deadlock Prevention – Deadlock avoidance – Deadlock detection – Recovery from Deadlocks						
Unit:4						
VIRTUAL MEMORY AND STORAGE MANAGEMENT			12 hours			
Storage Management – Swapping – Contiguous Memory allocation – Paging – Segmentation – Segmentation with Paging. Virtual Memory – Demand Paging – Process creation – Page Replacement –Allocation of frames – Thrashing						

Unit:5	FILE MANAGEMENT	11 hours
File Concept – Access Methods – Directory Structure - File System Structure – Allocation Methods – Free-space Management - Disk Structure – Disk Scheduling – Disk Management – Case Study: The Linux System, Windows.		
Unit:6	CONTEMPORARY ISSUES	1 hour
Expert lectures, online seminars - webinars		
Total Lecture hours		60 hours

Course code		Computer Storage Devices	L	T	P	C
Core/Elective/Supportive		Core : 7	4	0	0	4
Pre-requisite		Before starting the course students should have the basic knowledge about computer storage devices	Syllabus Version		2025-26 Onwards	
Course Objectives:						
The main objectives of this course are to:						
1. Students should have the basic knowledge about computer storage devices						
2. Understand the Role of Removable-Media Drives						
3. Concepts of Optical Technology						
Expected Course Outcomes:						
On the successful completion of the course, student will be able to:						
1	Describe the various storage devices of computer system					K1
2	Develop the utilities of magnetic storage					K2-K3
3	Develop and perform Hard Drive Advancements and disk formatting					K2
4	Apply Data Encoding on the Disc					K3
5	Build or recover Troubleshooting Optical Drives					K3-K6
K1 - Remember; K2 - Understand; K3 - Apply; K4 - Analyze; K5 - Evaluate; K6 - Create						
Unit:1						
Unit:1		Magnetic Storage	12 hours			
Magnetic Storage- History of Magnetic Storage- How Magnetic Fields Are Used to Store Data- Read/Write Head Designs- Ferrite- Metal-In-Gap- Thin Film- Magneto- Resistive Heads- Giant Magneto-Resistive Heads- Head Sliders- Data Encoding Schemes- RLL Encoding- Encoding Scheme Comparisons- Partial-Response, Maximum-Likelihood Decoders- Capacity Measurements- Areal Density- Increasing Areal Density with Pixie Dust- Perpendicular Magnetic Recording						
Unit:2						
Unit:2		Definition of a Hard Disk	12 hours			
Definition of a Hard Disk- Hard Drive Advancements- Form Factors- 5 1/4" Drive- 1" Drives- Hard Disk Drive Operation- The Ultimate Hard Disk Drive Analogy- Tracks and Sectors- Disk Formatting- Partitioning- High-Level Formatting- Basic Hard Disk Drive Components- Hard Disk Platters (Disks- Recording Media- Oxide Media- AFC Media- Read/Write Heads- Read/Write Head Designs- Stepper Motor Actuators- Voice Coil Actuators- Linear Actuators- Servo Mechanisms- Wedge Servo- Embedded Servo- Automatic Head Parking- Air Filters- Hard Disk Temperature Acclimation- The Faceplate or Bezel- Hard Disk Features- Capacity BIOS Limitations-Operating System Limitations- Performance-Transfer Rate- Average Seek Time- Average Access Time- Cache Programs and Caching Controllers-Interleave Selection- Reliability-SMART- Cost.						
Unit:3						
Unit:3		The Role of Removable-Media Drives	12 hours			
The Role of Removable-Media Drives-The Importance of Data Backups-Data Transfer Between Systems- Floppy-based Driver Installation for Removable-Media Devices- Comparing Disk, Tape, and Flash Memory Technologies-Magnetic Disk Media- Magnetic Tape Media-Flash Memory Media-Interfaces for Removable- Media Drives- Floppy Disk Drives, Past and Present-Alternatives to Floppy Drives-Floppy Drive Interfaces- Drive Components-Power and Data Connectors-The Floppy Disk Controller Cable-How the Operating System Uses a Floppy Disk-Analyzing 3 1/2" Floppy Disk Media Construction- Floppy Disk Media Types and Specifications-Floppy Drive Installation Procedures						

Unit:4	High-Capacity Magnetic Storage Devices	12 hours
High-Capacity Magnetic Storage Devices -Iomega Zip-Iomega REV-Iomega REV Drives- Magneto- Optical Drives-Comparing MO to "Pure" Magnetic Media-Flash Memory Devices- Types of Flash Memory Devices-Comparing Flash Memory Devices-Moving Data in Flash Memory Devices to Your Computer-Key Factors in Selecting a Removable-Media Drive- Microdrive Technology-Tape Drives-Hard-Tape Backup Technologies-Choosing a Tape Backup Drive-Tape Standards and Compatibility-Tape Drive Backup Software-Backup and Restoration Troubleshooting-Motherboard BIOS- ROM Hardware-ROM Chip Types-PROM- EPROM- EEPROM/Flash ROM-ROM BIOS Manufacturers-Flash BIOS -CMOS Setup Specifications		
Unit:5	Optical Technology	11 hours
Optical Technology-CD-Based Optical Technology-Data Encoding on the Disc-DVD- Data Encoding on the Disc-Blu-ray Disc-HD-DVD-Optical Disc Formats-CD-ROMXA- Multisession Recording Overview-Photo CD Disc Types-CD-ROM File Systems- DVD Formats and Standards- CD/DVD Read-Only Drives and Specifications-Direct Memory Access and Ultra-DMA-Interface- Loading Mechanism-Internal Versus External Drives- Writable CDs-Recording Software-CD Copy Protection-CD/DVD Drive and Software Installation and Support-Bootting from a Floppy Disk with CD/DVD Drive Support- Troubleshooting Optical Drives		
Unit:6	Contemporary Issues	1 hour
Expert lectures, online seminars - webinars		
	Total Lecture hours	60 hours

Course code		Programming Lab – Fundamentals Of Microprocessor	L	T	P	C
Core/Elective/Supportive		Core Lab : 5	0	0	3	2
Pre-requisite	The objective of the course is to train the students to basic structure of a processor - arithmetic registers, address registers, basic addressing modes		Syllabus Version		2025-26 Onwards	
Course Objectives:						
The main objectives of this course are to:						
1.To expose the students with the basic structure of a processor						
2. The concepts of addressing modes						
Expected Course Outcomes:						
On the successful completion of the course, student will be able to:						
1	The competence and the development of small to medium sized application					K1, K2
2	programs that demonstrate professionally acceptable coding					K2-K3
3	Demonstrate the concept of microprocessor					K3
4	Apply the concept of data transfer					K4-K5
5	Develop CPU I/O Communication Understand the fundamental concepts of RISC and CISC					K6
K1 - Remember; K2 - Understand; K3 - Apply; K4 - Analyze; K5 - Evaluate; K6 - Create						
Programs			36 hours			
1. Addition – 8 bit, 16 bit						
2. Subtraction – 8 bit, 16 bit						
3. Multiplication.						
4. Array addition (multibyte)						
5. Logical operators – AND, OR NOT.						
6. Decimal to ASCII and ASCII to Decimal						
7. Decimal to Hexa and Hexa to Decimal						
8. Ascending Order.						
9. Descending Order						
10. Up/down Counter.						
11. Block data transfer						
12. Rotating display – Flashing display						
13. Interfacing with LED's						
14. Square wave Generators						
15. Interfacing with ADC						
16. Interfacing with DAC						
			Total Lecture hours		36 hours	
Text Book(s)						
1	Microprocessor Architecture programming & application with 8085 & 8080 – by Ramesh.s.Gaonkar –Wiley eastern.

Course code		Internet of Things (IoT)	L	T	P	C
Core/Elective/Supportive		Allied: 4	4	0	0	4
Pre-requisite	Students should have the basic understanding of logical circuits and hardware architecture.		Syllabus Version		2025-26 Onwards	
Course Objectives:						
The main objectives of this course are to: 1. To learn the concepts of IoT and its protocols. 2. To learn how to analysis the data in IoT. 3. To develop IoT infrastructure for popular applications. 4. To report about the IoT privacy, security and vulnerabilities solution						
Expected Course Outcomes:						
On the successful completion of the course, student will be able to:						
1	To understand the fundamentals of Internet of Things.					K1
2	To know the basics of communication protocols and the designing principles of Web connectivity.					K2
3	To gain the knowledge of Internet connectivity principles					K2-K3
4	Designing and develop smart city in IoT					K2-K3
5	Analyzing and evaluate the data received through sensors in IOT.					K4-K5
K1 - Remember; K2 - Understand; K3 - Apply; K4 - Analyze; K5 - Evaluate; K6 - Create						
Unit:1	INTRODUCTION				12 hours	
Introduction - Definition & characteristics of IoT - physical design of IoT - logical design of IoT - IoT enabling Technologies - IoT levels & Deployment templates.						
Unit:2	IOT and M2M				12 hours	
Domain specific Iots : Home Automation - cities - Environment - Energy - retail - logistics - Agriculture - Industry Health and life style. IoT and M2M - Difference between IoT and M2M - SDN and NFV for lot.						
Unit:3	IOT SPECIFICATION				12 hours	
IoT systems management - SNMP - YANG – NETOPEER. IoT Platforms Design Methodology - purpose and specification - process specification - Domain model specification - Information model specification - Service specification - IoT level specification - functional view specification - operational view specification - Device and component Integrators - Application Development.						
Unit:4	LOGICAL DESIGN USING PYTHON				12 hours	
Logical design using python - Installing python - type conversions - control flow - functions - modules - File handling - classes. IoT physical devices and End points, building blocks of IoT device - Raspberry Pi - Linux on Raspberry Pi - Raspberry Pi interfaces.						
Unit:5	IOT AND CLOUD COMPUTING				10 hours	
Python Web application frame work - Amazon web services for IoT- Case Studies illustrating IoT Design. Home Automation-Environment-Agriculture-IoT Primer.						

Unit:6	Contemporary Issues	2 hours
Expert lectures, online seminars – webinars		
	Total Lecture hours	60 hours

Course code		SOFTWARE PROJECT MANAGEMENT - LAB	L	T	P	C
Core/Elective/Supportive		Skill Based Subject 2 (Lab) : 1	0	0	3	2
Pre-requisite		Basic knowledge in SDLC and managing of software projects	Syllabus Version		2025-26 Onwards	
Course Objectives:						
The main objectives of this course are to: 1. To gain knowledge about how to develop project plan 2. To create requirement analysis and specification for software applications. 3. Student is given an introduction of various phases of software development life cycle models. 4. To analyze the steps are to be implemented using SDLC to develop applications.						
Expected Course Outcomes:						
On the successful completion of the course, student will be able to:						
1	Prepare a Project Plan with requirement analysis and specification.					K1,K2
2	Understand and develop cost estimation model for real time applications.					K2-K3
3	Implement the concepts of checkpoints in design phase					K3
4	Analyze the Development phase of the database and text area of the applications					K4-K5
5	Create SDLC for real time applications.					K6
K1 - Remember; K2 - Understand; K3 - Apply; K4 - Analyze; K5 - Evaluate; K6 - Create						
Programs			36 hours			
1. Preparation of Project Management Plan.						
2. Using any of the CASE tools, Practice requirement analysis and specification for different firms.						
3. Case study of cost estimation models.						
4. Practice object oriented design principles for implementation.						
5. Practice function oriented design						
6. Practice creating software documentation for the Analysis phase of software development life cycle for a real time application.						
7. Practice creating software documentation for the Development phase of software development life cycle for a real time application						
8. Practice creating software documentation for the Implementation phase of software development life cycle for a real time application.						
9. Practice creating software documentation for the Testing phase of software development life cycle for a real time application						
10. Simulate a tool for path testing principles.						
11. Simulate a tool for testing based on control structures						
12. Simulate a tool that reflects black box testing concepts

Fifth Semester

Course code		NETWORK SECURITY AND CRYPTOGRAPHY	L	T	P	C
Core/Elective/Supportive	Core : 8		6	0	0	4
Pre-requisite	Basic knowledge about the network security		Syllabus Version		2025-26 Onwards	
Course Objectives:						
The main objectives of this course are to:						
1. To enable the students to learn attacks on computers and how to handle the security issues.						
2. To study about the digital certificate and public key infrastructure protocols.						
3. To gain knowledge in firewalls in network securities						
Expected Course Outcomes:						
On the successful completion of the course, student will be able to:						
1	Understand the basics of attacks on computers and computer security and cryptography encryption and decryption					K2
2	Understand cryptography algorithm types and modes: asymmetric and symmetric key algorithms					K2-K3
3	Understand the concept of digital certificate and public key infrastructure and internet security protocols.					K3
4	Understand the user authentication and keberos, cryptography in java, .NET and operating system.					K4
5	Knowledge in firewalls in network security, VPN and case studies in cryptography and security.					K3-K4
K1 - Remember; K2 - Understand; K3 - Apply; K4 - Analyze; K5 - Evaluate; K6 - Create						
Unit:1		SERVICE MECHANISM AND ATTACKS	18 hours			
Service mechanism and attacks – The OSI security architecture – A model for network security – symmetric Cipher model – Substitution techniques – transposition techniques– simplified des – block chipper principles – the strength of des – block chipper design principles and modes of operation.						
Unit:2		CRYPTOGRAPHY	18 hours			
Triple des-blow fish – RCS Advanced Symmetric Block Ciphers –RC4 stream Cipher confidentially using symmetric encryption – introduction to number theory – public – key cryptography and RSA.						
Unit:3		KEY MANAGEMENT	18 hours			
Key management – Diffle Hellman key exchange – message authentication and hash function – hash algorithm – digital signature and authentication protocols – digital signature standard.						
Unit:4		AUTHENTICATION APPLICATION	18 hours			
Authentication application – pretty good privacy – S/MIME – ip security – web security considerations –secure socket layer transport layer security –secure electronic transaction.						
Unit:5		INTRUDERS	15 hours			
Intruders –intrusion detection – password management –viruses and related threats –virus countermeasures – fire wall design principles – trusted systems						
Unit:6		Contemporary Issues	3 hours			
Expert lectures, online seminars - webinars						
			Total Lecture hours		90 hours	
Text Book(s)

Course code		SOFTWARE TESTING	L	T	P	C
Core/Elective/Supportive	Core : 9		6	0	0	4
Pre-requisite	Basic knowledge in software project and SDLC		Syllabus Version	2025-26 Onwards		
Course Objectives:						
The main objectives of this course are to: 1. To study fundamental concepts in software testing 2. To discuss various software testing issues and solutions in software unit test, integration and system testing. 3. To expose the advanced software testing topics, such as object-oriented software testing methods. 4. List a range of different software testing techniques and strategies and be able to apply specific automated unit testing method to the projects.						
Expected Course Outcomes:						
On the successful completion of the course, student will be able to:						
1	Explain the basic concepts and the processes that lead to software testing					K2
2	Design test cases from the given requirements using Black box testing techniques					K3
3	Identify the test cases from Source code by means of white box testing techniques					K3
4	Know about user acceptance testing and generate test cases for it					K4
5	Examine the test adequacy criteria to complete the testing process					K4
K1 - Remember; K2 - Understand; K3 - Apply; K4 - Analyze; K5 - Evaluate; K6 - Create						
Unit:1 SOFTWARE DEVELOPMENT LIFE CYCLE MODELS 18 hours						
Software Development Life Cycle models: Phases of Software project – Quality, Quality Assurance, Quality control – Testing, Verification and Validation – Process Model to represent Different Phases - Life Cycle models. White-Box Testing: Static Testing – Structural Testing – Challenges in White-Box Testing.						
Unit:2 BLACK-BOX TESTING 18 hours						
Black-Box Testing: What is Black-Box Testing? - Why Black-Box Testing? – When to do BlackBox Testing? – How to do Black-Box Testing? – Challenges in White Box Testing - Integration Testing: Integration Testing as Type of Testing – Integration Testing as a Phase f Testing – Scenario Testing – Defect Bash.						
Unit:3 SYSTEM AND ACCEPTANCE TESTING 18 hours						
System and Acceptance Testing: system Testing Overview – Why System testing is done? – Functional versus Non-functional Testing - Functional testing - Non-functional Testing – Acceptance Testing Summary of Testing Phases.						
Unit:4 PERFORMANCE TESTING 18 hours						
Factors governing Performance Testing – Methodology of Performance Testing – tools for Performance Testing – Process for Performance Testing – Challenges. Regression Testing: What is Regression Testing? – Types of Regression Testing – When to do Regression Testing – How to do Regression Testing – Best Practices in Regression Testing.						
Unit:5 TEST PLANNING, MANAGEMENT, EXECUTION AND REPORTING 15 hours						
Test Planning, Management, Execution and Reporting: Test Planning – Test Management – Test Process – Test Reporting –Best Practices. Test Metrics and Measurements: Project Metrics – Progress Metrics – Productivity Metrics – Release Metrics						
Unit:6 Contemporary Issues 3 hours						
Expert lectures, online seminars - webinars						
Total Lecture hours			90 hours

Course code		COMPUTER NETWORKS	L	T	P	C
Core/Elective/Supportive		Elective : I	6	0	0	4
Pre-requisite		Students should have the knowledge on computer connectivity and connectivity peripherals.	Syllabus Version		2025-26 Onwards	
Course Objectives:						
The main objectives of this course are to: - To identify various components in a data communication system and understand state-of -the-art in network protocols, architectures and applications. - To enable students through the concepts of computer networks, different models and their involvement in each stage of network communication. - To educate the concepts of terminology and concepts of the OSI reference model and the TCP/IP reference model and protocols such as TCP, UDP and IP. - To be familiar with the concepts of protocols, network interfaces, and design/performance issues in local area networks and wide area networks. - Introduce the student to a network routing for IP networks and how a collision occurs and how to solve it and how a frame is created and character count of each frame.						
Expected Course Outcomes:						
On the successful completion of the course, student will be able to:						
1	Remember the organization of computer networks, factors influencing computer network development and the reasons for having variety of different types of networks.					K1
2	Understand Internet structure and can see how standard problems are solved and the use of cryptography and network security					K2
3	Apply knowledge of different techniques of error detection and correction to detect and solve error bit during data transmission.					K3
4	Analyze the requirements for a given organizational structure and select the most appropriate networking architecture and technologies					K4
5	Knowledge about different computer networks, reference models and the functions of each layer in the models.					K2-K4
K1 - Remember; K2 - Understand; K3 - Apply; K4 - Analyze; K5 - Evaluate; K6 - Create						
Unit:1BASICS OF NETWORKS AND OSI MODEL18 hours						
Network Hardware: LAN – WAN – MAN – Wireless – Home Networks. Network Software: Protocol Hierarchies – Design Issues for the Layers – Connection-oriented and connectionless services – Service Primitives – The Relationship of services to Protocols. Reference Models: OSI Reference Model – TCP/IP reference Model – Comparison of OSI and TCP/IP -Critique of OSI and protocols – Critique of the TCP/IP Reference model.						
Unit:2PHYSICAL LAYER18 hours						
PHYSICAL LAYER - Guided Transmission Media: Magnetic Media – Twisted Pair – Coaxial Cable – Fiber Optics. Wireless Transmission: Electromagnetic Spectrum – Radio Transmission – Microwave Transmission – Infrared and Millimeter Waves – Light Waves. Communication Satellites: Geostationary, Medium-Earth Orbit, Low Earth-orbit Satellites – Satellites versus Fiber.						
Unit:3DATA-LINK LAYER18 hours						
DATA-LINK LAYER: Error Detection and correction – Elementary Data-link Protocols – Sliding Window Protocols. MEDIUM-ACCESS CONTROL SUB LAYER: Multiple Access Protocols – Ethernet – Wireless LANs - Broadband Wireless – Bluetooth.						
Unit:4NETWORK LAYER18 hours						
NETWORK LAYER: Routing algorithms – Congestion Control Algorithms. TRANSPORT LAYER: Elements of Transport Protocols – Internet Transport Protocols: TCP						

Unit:5	APPLICATION LAYER	18 hours
APPLICATION LAYER: DNS – E-mail. NETWORK SECURITY: Cryptography –Symmetric Key Algorithms – Public Key Algorithms – Digital Signatures		
Total Lecture hours		90 hours

Course code		Organizational Behaviour	L	T	P	C
Core/Elective/Supportive		Elective : I	6	0	0	4
Pre-requisite		Basic knowledge in human behavior skills	Syllabus Version	2025-26 Onwards		
Course Objectives:						
The main objectives of this course are to: 1. To help the students to develop cognizance of the importance of human behaviour. 2. To enable students to describe how people behave under different conditions and understand why people behave as they do. 3. To provide the students to analyses specific strategic human resources demands for future action. 4. To enable students to synthesize related information and evaluate options for the most logical and optimal solution such that they would be able to predict and control human behaviour and improve results.						
Expected Course Outcomes:						
On the successful completion of the course, student will be able to:						
1	Demonstrate the applicability of the concept of organizational behavior to understand the behavior of people in the organization.					K1
2	Develop Managerial skills for Individual Behaviors.					K2
3	Analyze the complexities associated with management of the group behavior in the organization. Analyze how to manage the Stress during a job.					K3
4	Develop an Organizational Behaviour model for any type of Organization.					K3
5	Analyze the Common biases and eradication in Decision Making Process.					K4
K1 - Remember; K2 - Understand; K3 - Apply; K4 - Analyze; K5 - Evaluate; K6 - Create						
Unit:1						
INTRODUCTION						
18 hours						
Introduction to Organizational Behavior –Related Disciplines – Theoretical Framework – Organizational Approaches – Modern Organizational Scenario: Impact of Globalization						
Unit:2						
INDIVIDUAL BEHAVIOR						
18 hours						
Individual Behavior – Perception – Process – Changes - Personality and Attitudes – Job Satisfaction						
Unit:3						
MOTIVATION						
18 hours						
Motivation: Needs, Content and Process: Motivation: Content Theories -ghh– Process Theories – Contemporary Theories – Motivation Applied – Job Design and Goal setting. Leadership – Background – Process- Styles – Activities – Skills						
Unit:4						
GROUP						
18 hours						
Group Dynamics – The nature of Informal Organizations – Formal Groups – Interactive conflict: Interpersonal conflict – Inter-group behavior and conflict – Negotiation Skills: Going beyond conflict management – Traditional Negotiation Approaches - Contemporary negotiation skills.						
Unit:5						
COMMUNICATION						
15 hours						
Communication – Role and background – Interpersonal communication – Informal						

communication- The Decision Making process – Participative Decision making techniques – Organization design – culture – Organization change and development		
Unit:6	Contemporary Issues	3 hours
Expert lectures, online seminars - webinars		
	Total Lecture hours	90 hours

Course code	CASE Tools Concepts and Applications	L	T	P	C
Core/Elective/Supportive	Elective-I	6	0	0	4
Pre-requisite	Basic knowledge in software project, testing in SDLC	Syllabus Version	2025-26 Onwards		
Course Objectives:					
The main objectives of this course are to: 1. To enhance the basic software engineering methods and practices. 2. To learn the techniques for developing software systems. 3. To understand the object oriented design. 4. To understand software testing approaches					
Expected Course Outcomes:					
On the successful completion of the course, student will be able to:					
1	Understand the basic concepts of software engineering				K1
2	Apply the software engineering models in developing software applications				K2-K3
3	Implement the object oriented design in various projects				K4
4	Knowledge on how to do a software project with in-depth analysis.				K3
5	To inculcate knowledge on Software engineering concepts in turn gives a roadmap to design a new software project.				K1-K4
K1 – Remember; K2 – Understand; K3 – Apply; K4 – Analyze; K5 – Evaluate; K6 – Create					
Unit:1	SOFTWARE ENGINEERING			18 hours	
Data Modeling: Business Growth-Organizational Model-Case Study of student MIS-What is the purpose of such Models-Understanding the business-Types of models-model development approach-the case for structural development-advantages of using a case tool. System analysis and design-what is DFD-General Rules for Drawing DFD-Difference Between Logical data flow diagram and Physical data flow diagram-Software verses Information Engineering-How case tools store information.					
Unit:2	SOFTWARE DESIGN			18 hours	
Approach used to solve the problem statement: How to deal with a problem statement-Data flow diagram for Payroll System-Presentation Diagram for Payroll System-sehematics of the model-Forms-Screens-Menu Screens-Data entry Screens-Report Output Format-Utilities. Installation of Ubridge and Synthesis: How to use the tools in Ubridge Synthesis for case-Installation of Ubridge Synthesis-Computer Aided Software Engineering-Getting Ubridge to work-Setup-Assign-Housekeep-The Ubridge page.					
Unit:3	SOFTWARE TESTING			18 hours	
Introduction to Ubridge: Introduction – Main flow of the system prototyping your Report-Introducing the Novice Model of the Operation. Introducing Synthesis – Synthesis basic – Synthesis – Menu Drawing the screen-Requirement Definition-Diagram-Data Dictionary-Document-Synthesis Main Administration – Synthesis reference – importing and exporting screen.					
Unit:4	SOFTWARE CONFIGURATION MANAGEMENT			18 hours	
Diagram definition tool: Introduction-Starting DDT-Drawing your own Icon – Defining the					

connection rules-Rebuilding your icon. Object oriented methodologies: Rambaugh et.al.'s object modeling techniques-The Booch methodology –The Jacobson et.al. Methodologies-Pattern-Frame works-The Unified Approach.		
Unit:5	ESTIMATION	15 hours
Introduction to UML-UML Diagram-Class Diagram-Use Case Diagram-Interaction Diagram-Sequence Diagram-Collaboration Diagram-State Chart Diagram-Activity Diagram-Component Diagram-Deployment Diagram.		
Unit:6	Contemporary Issues	3 hours
Expert lectures, online seminars – webinars		
	Total Lecture hours	90 hours
Text Book(s)		
1	Case Tools Concepts and Applications, Ivan N Bayross, BPB Publications	
2	Object Oriented System Development using the Unified Modeling Language, McGraw Hill International edition.

Course code		COMPUTER HARDWARE MAINTENANCE	L	T	P	C
Core/Elective/Supportive		Core Lab : 6	0	0	6	4
Pre-requisite		Students should have the practical knowledge about computer hardware components.	Syllabus Version		2025-26 Onwards	
Course Objectives:						
The main objectives of this course are to: 1. To understand windows installation procedure. 2. To customize windows desktop 3. To Install a printer & Creating Network Printer 4. To create system restore and backup option.						
Expected Course Outcomes:						
On the successful completion of the course, student will be able to:						
1	Understand the concepts of HDD, FDD					K1
2	Learn the advantages of CD,DVD, USB					K2
3	Design and develop install, Sharing options, Configure a Peer-to-Peer Network					K3
4	Apply the knowledge of system data backup methods.					K4
5	Learn basics of DOS commands and remote desktop					K6
K1 – Remember; K2 – Understand; K3 – Apply; K4 – Analyze; K5 – Evaluate; K6 – Create						
Programs			36 hours			
1. Install an Operating System – Windows XP						
2. Install an Operation System – Windows 98						
3. Install an Operation System – Windows 2000						
4. Repairing OS						
5. Configuration Antivirus & Firewalls						
6. Enabling Disk quota						
7. Customize the Windows Desktop						
8. Image and Replace a Windows 98 Hard Drive						
9. Install and Launch Windows Applications						
10. Install a CD-and DVD						
11. Install a CD-ROM Drive – Windows						
12. Install a Sound Card – Windows						
13. Install a printer & Creating Network Printer						
14. System restoration						
15. Fixing SMPS & its Complaints						
16. Use scan disk and defrag -Windows						
17. Create an ERD and Startup Disk – Windows 2000						
18. Configure and Connect Dial-Up Networking						
19. Expansion Bus Cables						
20. Adding MODEM & Internet						
21. Configure a Peer-to-Peer Network						

22. Driver Signing
23. Troubleshoot Software
24. Scanner installation
25. Remote Desktop

Course code		SERVER ADMINISTRATION	L	T	P	C
Core/Elective/Supportive		Skill based Subject : 2	3	0	0	2
Pre-requisite	Students should have the practical knowledge about Basic knowledge in server administration		Syllabus Version		2025-26 Onwards	
Course Objectives:						
The main objectives of this course are to: 1. To understand server editions and New Active Directory Features 2. To enable students to learn the basics of Set Up Server Roles Manually 3. To familiar with Registry Security 4. To learn about the IIS. 5. To enable the students to learn how to hardware bootup.						
Expected Course Outcomes:						
On the successful completion of the course, student will be able to:						
1	Understand the basics of Client /Server architecture					K1
2	Understand the procedures of windows server installtion					K2
3	Understand and remember the components in Server Editions					K2
4	Understand the Client Remote Connection Software					K3
5	Knowledge on Starting a Remote Desktop Session and Leaving a Remote Desktop Session					K2-K4
K1 – Remember; K2 – Understand; K3 – Apply; K4 – Analyze; K5 – Evaluate; K6 – Create						
Unit:1	INTRODUCING WINDOWS SERVER 2003				9 hours	
Introducing Windows Server 2003 -Windows Server 2003 Editions- Standard Edition- Enterprise Edition- Datacenter Edition -Web Edition- Brand New in Windows Server 2003- New Remote Administration Tools -New Active Directory Features -Availability and Reliability Improvements- Resultant Set of Policies						
Unit:2	INSTALLATION				9 hours	
Installation. Hardware Requirements. Hardware Compatibility List. Symmetric Multiprocessing Hardware. Clustering Hardware. Plug and Play Support -ACPI Issues - Developing a Deployment Plan -Document the Hardware Document the Network- Document the Software Document the Legacy Components- Prepare for Problems -Complete the Pre- installation Tasks .-Understanding Installation Models -Winnt.exe vs. Winnt32.exe –Installing from CD-Booting to the Windows Server 2003 CD . . Running Setup.exe from CD -Installing from an MS-DOS Boot Disk .-Using Network Share points Using Logon Scripts and BatchFiles . Automated Installations-Choosing an Automated Installation Type-Unattended Installation-SYSPREP						
Unit:3	SYSTEM BASICS FOR SERVERS				9 hours	
System Basics for Servers . Manage Your Server . Configure Your Server Wizards Removing Server Roles Configure Your Server Log . Set Up Server Roles Manually . Remote Desktop - Enable Remote Desktop on the Server -Client Remote Connection Software . Starting a Remote Desktop Session- Running a Remote Desktop Session -Leaving a Remote Desktop Session- Managing the Connections from the Server -Joining the Console Session-Using a Snap-in for Remote Desktop . - Changes in IIS -Use Web Edition for IIS . Installing IIS -Set Compatibility Options Manually						
Unit:4	THE WINDOWS SERVER 2003 REGISTRY				9 hours	
The Windows Server 2003 Registry. Overview of the Registry . Registry structure . Hives and Hive Files. Registry Data Items. HKEY_CLASSES_ROOT . HKEY_CURRENT_USER . Regedit.exe.						

Prevent Regedit from Displaying the Last Accessed Key . Accessing Remote Registries. Searching the Registry- Creating Favorites - Tweak and Troubleshoot with the Registry . Exporting Keys - Adding Items to the Registry - Registry Security -Auditing the Registry . Reg.exe . General Guidelines for Reg.exe .		
Unit:5	BOOTING HARDWARE BOOTUP	6 hours
UNIT V: Web Services: Introduction- Infrastructure- SOAP-Building web services- Deploying and publishing web services- Finding and consuming web services		
Unit:6	Contemporary Issues	3 hours
Expert lectures, online seminars – webinars		
	Total Lecture hours	45 hours

Course Code		Core Lab - VII : Capstone Project Work	L	T	P	C
Core/Elective/Supportive			0	0	3	2
Pre - requisite		- Students should have a good understanding of software engineering - Student should possess strong analytical skills - Strong coding skills in any one programming	Syllabus version		2025-26 Onwards	
Course Objectives - To understand and select the task based on their core skills. - To get the knowledge about analytical skill for solving the selected task. - To get confidence for implementing the task and solving the real time problems.						
Expected Course Outcomes						
On the successful completion of the course, student will be able to:						
1	Illustrate a real world problem and identify the list of project requirements					K3
2	Judge the features of the project including forms, databases and reports					K5
2	Design code to meet the input requirements and to achieve the required output					K6
3	Compose a project report incorporating the features of the project					K6
K1 – Remember K2 – Understand K3 – Apply K4 - Analyze K5 – Evaluate K6 - Create						
Aim of the project work						
1. The aim of the project work is to acquire practical knowledge on the implementation of the programming concepts studied.						
2. Each student should carry out individually one project work and it may be a work using the software packages that they have learned or the implementation of concepts from the papers studied or implementation of any innovative idea focusing on application oriented concepts.						
3. The project work should be compulsorily done in the college only under the supervision of the department staff concerned.						
Selection of Tools						
No restrictions shall be placed on the students in the choice of platform/tools/languages to be utilized for their project work, though open source is strongly recommended, wherever possible. No value shall be placed on the use of tools in the evaluation of the project.						
Viva Voce						
1. Viva-Voce will be conducted at the end of the semester by both Internal (Respective Guides) and External Examiners, after duly verifying the project report in the college, for a total of 50 marks.						
2. Internal Mark Split up (20 marks) : Title Selection – 5 marks, Problem Identification – 5 marks Review I and Review II -10 marks						
3. External Mark Split up (30 marks) : Project report 15 marks, Viva PPT Presentation 5 marks and 10 Marks for Viva Voce.

Abstract

Chapter I Introduction

1.1 An Overview

1.2 Objectives of the project

1.3 Organization project

1.4 Scope of the system

Chapter II System Analysis

2.1 Existing System

2.2 Proposed System

2.3 Hardware Specification

2.4 Software Specification

Chapter III System Development

3.1 Description of Modules (1 Modules)

3.1.1 Module 1

3.2 Input Design

3.3 Output Design

3.3.1 Screens and Reports

3.4 Data Base Design

3.4.1 Table Design

3.5 Source Code

3.5.1 Sample Code

Chapter IV System Testing and Implementation

4.1 System Testing

4.2 System Implementation

Chapter V Conclusion

5.1 Conclusion

5.2 Scope of the Future

Bibliography

Sixth Semester

Course code		WEB TECHNOLOGY	L	T	P	C
Core/Elective/Supportive		Core : 10	6	0	0	4
Pre-requisite		Basic knowledge in web server, browser and web application	Syllabus Version		2025-26 Onwards	
Course Objectives:						
The main objectives of this course are to: 1. On completion of this course, a student will be familiar with client server architecture and able to develop a web application using java technologies. 2. Students will gain the skills and project-based experience needed for entry into web application and development careers 3. Understand best technologies for solving web client/server problems 4. Use Java script for dynamic effects and to validate form input entry 5. Analyze to Use appropriate client-side or Server-side applications						
Expected Course Outcomes:						
On the successful completion of the course, student will be able to:						
1	Understand and analyse the TCP/IP basics.					K1
2	Understand Domain server name, FTP, TFTP, basics of WWW, web browser architecture.					K2
3	Knowledge of Microsoft and java technologies, dynamic web pages, DHTML, ASP and JSP.					K2-K3
4	Understanding active web pages, Java Applet, Java bean, CORBA, RMI and EDI architecture					K2-K3
5	Knowledge on XML, XML parser, WAP					K4-K6
K1 - Remember; K2 - Understand; K3 - Apply; K4 - Analyze; K5 - Evaluate; K6 - Create						
Unit:1		TCP/IP			18 hours	
TCP/IP: TCP/IP Basics – Why IP address – Logical Address - TCP/IP Example- The concept of IP address – Basics of TCP – Features of TCP – Relationship between TCP and IP – Ports and Sockets – Active Open and Passive Open - TCP Connections – What makes TCP reliable? – TCP Packet format - Persistent TCP connections – UDP – Differences between TCP and UDP						
Unit:2		DNS			18 hours	
DNS – E-mail – FTP – TFTP – History of WWW – Basics of WWW and Browsing - Local information on the internet – HTML – Web Browser Architecture – Web Pages and Multimedia – Remote Login (TELNET).						
Unit:3		INTRODUCTION TO WEB TECHNOLOGY			18 hours	
Introduction to Web Technology: Web pages – Tiers – Concept of a Tier – Comparison of Microsoft and Java Technologies – Web Pages – Static Web Pages – Plug-ins – Frames – Forms. Dynamic Web Pages: Need – Magic of Dynamic Web Pages – Overview of Dynamic Web Page Technologies – Overview of DHTML – Common Gateway Interface – ASP – ASP Technology – ASP Example – Modern Trends in ASP – Java and JVM – Java Servlets – Java Server Pages.						
Unit:4		ACTIVE WEB PAGES			18 hours	
Active Web Pages: Active Web Pages in better solution – Java Applets – Why are Active Web Pages Powerful? – Lifecycle of Java Applets – ActiveX Controls – Java Beans. Middleware and Component-Based E-Commerce Architectures: CORBA – Java Remote Method Invocation – DCOM. EDI: Overview – Origins of EDI – Understanding of EDI – Data Exchange Standards – EDI Architecture – Significance of EDI – Financial EDI – EDI and internet.						
Unit:5		XML			15 hours	
XML: SGML – Basics of XML – XML Parsers – Need for a standard. WAP: Limitations of Mobile devices – Emergence of WAP – WAP Architecture – WAP Stack – Concerns about WAP and its future – Alternatives to						

WAP.		
Unit:6	Contemporary Issues	3 hours
Expert lectures, online seminars - webinars		
	Total Lecture hours	90 hours
Text Book(s)		
1	Web Technologies: TCP/IP to Internet Applications Architectures – Achyut S Godbole & Atul Kahate, 2007, TMH. (UNIT-I: 3.1-3.5,4.1-4.12 UNIT-II: 5.1-5.4,6.1-6.7 UNIT III:8.1-8.1,9.1- 9.13 UNIT IV: 10.1-10.7,15.1-15.3,16.1-16.8 UNIT-V: 17.1-17.4,18.1-18.6)

Course code		MASTERING LAN & TROUBLE SHOOTING	L	T	P	C
Core/Elective/Supportive	CORE : 11		6	0	0	4
Pre-requisite	Understand the Basics of Computer networks		Syllabus Version		2025-26 Onwards	
Course Objectives:						
The main objectives of this course are to: 1. To enable the students to learn computer networks on computers and how to handle the network security issues. 2. To study about the types of network. 3. To gain knowledge in firewalls in network securities.						
Expected Course Outcomes:						
On the successful completion of the course, student will be able to:						
1	Understand the basics of computer networks.					K2
2	Understand PC hardware-interconnections between Boxes					K2-K3
3	Understand the concept of MOTHERBOARD CIRCUITS and Mother board functions					K3
4	Understand the CRT controller principle					K4
5	Knowledge in installation and maintenance					K3-K4
K1 - Remember; K2 - Understand; K3 - Apply; K4 - Analyze; K5 - Evaluate; K6 - Create						
Unit:1	PC- HARDWARE OVERVIEW				18 hours	
PC- Hardware overview Introduction to computer organization-Memory-PC family-PC hardware-interconnections between Boxes-Inside the boxes:-motherboard, daughter boards, floppy disk drive, HDD, speaker, mode switch, front panel indicators & Control-mother board logic-memory space-I/O port address-wait state-interrupts -I/O data transfer-DMA channels-POST sequence.						
Unit:2	PERIPHERAL DEVICES				18 hours	
PERIPHERAL DEVICES Floppy drive controller-Overview-Disk format-FDC system interface-FDD interface Hard Disk controller-overview-Disk Drives and interface- controller post description Hard disk card-Hard disk format. Display Adapter:-CRT display- CRT controller principle -CRT controller 6845 Printer controller:-Centronics interface- programming sequence -Hardware overview-printer-sub assemblers.						
Unit:3	MOTHERBOARD CIRCUITS				15 hours	
MOTHERBOARD CIRCUITS Mother board functions-functional units and inter communications:-Reset logic -CPU nucleus logic-DMA logic-Wait state logic-NM logic-speaker logic-keyboard interface-SMPS.						
Unit:4	INSTALLATION AND MAINTENANCE				18 hours	
INSTALLATION AND MAINTENANCE Introduction-pre installation planning - installation practice-routine checks-special configuration memory up gradation - HD upgradation - DOS command(Internal and external).Preventive maintenance-system usage.						
Unit:5	TROUBLE SHOOTING				18 hours	
Network Security Firewalls and Virtual Private Networks (VPN) : Introduction – Brief introduction to TCP/IP – Fire walls – IP security – Virtual Private networks (VPN) – Intrusion. Case Studies on Cryptography and Security : Introduction – Cryptographic Solutions a Case Study – SSO – Secure inter						

branch payment Transactions – DOS Attacks – IP Spoofing Attacks – Cross Site Scripting Vulnerability (CSSV) – Contract signing – secret Splitting - virtual elections – secure multiparty calculations – creating a VPN – Cookies and Privacy.

Course code		WEB TECHNOLOGY LAB	L	T	P	C
Core/Elective/Supportive		Core Lab : 7	0	0	3	2
Pre-requisite		Basic knowledge in web server, browser and web application	Syllabus Version		2025-26 Onwards	
Course Objectives:						
The main objectives of this course are to:						
1. On completion of this course, a student will be familiar with client server architecture and able to develop a web application using java technologies.						
2. Students will gain the skills and project-based experience needed for entry into web application and development careers						
3. Understand best technologies for solving web client/server problems						
4. Use Java script for dynamic effects and to validate form input entry						
5. Analyze to Use appropriate client-side or Server-side applications.						
Expected Course Outcomes:						
On the successful completion of the course, student will be able to:						
1	Understand and analyze the TCP/IP basics.					K1
2	Understand Domain server name, FTP, TFTP, basics of WWW, web browser architecture.					K2
3	Knowledge of Microsoft and java technologies, dynamic web pages, DHTML, ASP and JSP.					K2-K3
4	Understanding active web pages, Java Applet, Java bean, CORBA, RMI and EDI architecture					K2-K3
5	Knowledge on XML, XML parser, WAP					K4-K6
K1 - Remember; K2 - Understand; K3 - Apply; K4 - Analyze; K5 - Evaluate; K6 - Create						
Programs			36 hours			
1.Design a personal web page using HTML.						
2.Design a data entry form in HTML.						
3.Write a Program in ASP to get data using a form, validate the data and returns thesame data for correction if any using the same form.						
4.Write a program in ASP to display the Session properties.						
5.Write a program in ASP that makes use of Ad Rotator component.						
6.Write a program in ASP that makes use of Browser Capabilities component.						
7.Write a program in ASP that makes use of Content Rotator component.						
8.Write a program in ASP that makes use of page counter component.						
9.Write a program in ASP to get the data of students using forms and stores them indatabase.						
10.Write a program in ASP to perform record navigation using a form.

Course code		GRAPHICS AND MULTIMEDIA	L	T	P	C
Core/Elective/Supportive		Elective : II	6	0	0	3
Pre-requisite		Basic knowledge in 2D, 3D and multimedia file formats	Syllabus Version		2025-26 Onwards	
Course Objectives:						
The main objectives of this course are to: 1. Design and apply two dimensional graphics and transformations. 2. Design and apply three dimensional graphics and transformations. 3. Apply Illumination, color models and clipping techniques to graphics. 4. Understood Different types of Multimedia File Format.						
Expected Course Outcomes:						
On the successful completion of the course, student will be able to:						
1	Explain applications, principles, commonly used and techniques of computer graphics and algorithms for Line-Drawing, Circle- Generating and Ellipse Generating					K2
2	Students will get the concepts of 2D and 3D, Viewing, Curves and surfaces, Hidden Line/surface elimination techniques					K3
3	Studies concepts of Multimedia Systems, Text, Audio and Video tools					K3
4	Compressing audio and video using MPEG-1 and MPEG-2					K4
5	Creates Animation with special effects using algorithms					K6
K1 - Remember; K2 - Understand; K3 - Apply; K4 - Analyze; K5 - Evaluate; K6 - Create						
Unit:1						
		OUTPUT PRIMITIVES	18 hours			
Output Primitives: Points and Lines – Line-Drawing algorithms – Loading frame Buffer – Line function – Circle-Generating algorithms – Ellipse-generating algorithms. Attributes of Output Primitives: Line Attributes – Curve attributes – Color and Grayscale Levels – Area-fill attributes – Character Attributes.						
Unit:2						
		2D GEOMETRIC TRANSFORMATIONS	18 hours			
2D Geometric Transformations: Basic Transformations – Matrix Representations – Composite Transformations – Other Transformations. 2D Viewing: The Viewing Pipeline – Viewing Coordinate Reference Frame – Window-to-Viewport Co-ordinate Transformation - 2D Viewing Functions – Clipping Operations.						
Unit:3						
		TEXT	18 hours			
Text: Types of Text – Unicode Standard – Font – Insertion of Text – Text compression – File formats. Image: Image Types – Seeing Color – Color Models – Basic Steps for Image Processing – Scanner – Digital Camera – Interface Standards – Specification of Digital Images – CMS – Device Independent Color Models – Image Processing software – File Formats – Image Output on Monitor and Printer						
Unit:4						
		AUDIO	18 hours			
Audio: Introduction – Acoustics – Nature of Sound Waves – Fundamental Characteristics of Sound – Microphone – Amplifier – Loudspeaker – Audio Mixer – Digital Audio – Synthesizers – MIDI – Basics of Staff Notation – Sound Card – Audio Transmission – Audio File formats and CODECs – Audio Recording Systems – Audio and Multimedia – Voice Recognition and Response - Audio Processing Software						
Unit:5						
		VIDEO AND ANIMATION	15 hours			
Video: Analog Video Camera – Transmission of Video Signals – Video Signal Formats – Television Broadcasting Standards – PC Video – Video File Formats and CODECs – Video Editing – Video Editing Software. Animation: Types of Animation – Computer Assisted Animation – Creating Movement – Principles of Animation – Some Techniques of Animation – Animation on the Web – Special Effects – Rendering						

Algorithms. Compression: MPEG-1 Audio – MPEG-1 Video - MPEG-2Audio – MPEG-2 Video.		
Unit:6	Contemporary Issues	3 hours
Expert lectures, online seminars – webinars

Course code		BUSINESS INTELLIGENCE	L	T	P	C
Core/Elective/Supportive	Elective - II		6	0	0	3
Pre-requisite	Basic knowledge in data, data base and information		Syllabus Version		2025-26 Onwards	
Course Objectives:						
The main objectives of this course are to:						
3. To enable the students to learn business intelligence concepts, data warehouses, data mining techniques for CRM.						
4. To learn about text mining and web mining and its applications.						
Expected Course Outcomes:						
On the successful completion of the course, student will be able to:						
1	Understand the basics of business intelligence, business decisions, data warehouses and its architecture, KDD process.					K2
2	Understand the applications of data mining in business, data mining techniques for CRM, text mining and web mining.					K2,K3
3	Knowledge in business intelligence, application in various domains and best practices.					K3
4	Understand the knowledge management, its architecture, approaches and tools.					K3
5	Knowledge in Web analytics and business intelligence, eCRM and case studies in web analytics.					K4
K1 - Remember; K2 - Understand; K3 - Apply; K4 - Analyze; K5 - Evaluate; K6 - Create						
Unit:1						
INTRODUCTION TO BUSINESS INTELLIGENCE			18 hours			
Introduction to business intelligence and business decisions – Data warehouses and its role in Business Intelligence – Creating a corporate data warehouse – Data Warehousing architecture – OLAP vs. OLTP - ETL process – Tools for Data Warehousing – Data Mining – KDD Process						
Unit:2						
APPLICATIONS			18 hours			
Applications of Data Mining in Business – Data Mining Techniques for CRM – Text Mining in BI - Web Mining – Mining e-commerce data – Enterprise Information Management - Executive Information Systems						
Unit:3						
BUSINESS INTELLIGENCE			18 hours			
Business Intelligence – Function, Process, Services & Tools - Application in different domains – Operational BI - Customizing BI – Managing BI projects vs. Traditional IS projects – Managing BI projects – Best Practices in BI Strategy						
Unit:4						
KNOWLEDGE MANAGEMENT			18 hours			
Knowledge Management – Definition – Data Vs. Information Vs. Knowledge – The ten key principle of KM – Knowledge Management Architecture – Knowledge Management Vs. Knowledge Processing – KM approaches – KM Tools – KM Infrastructure – KM models - KM Strategies						
Unit:5						
ANALYTICS			15 hours			
Web Analytics and Business Intelligence – eCRM - Case Study: Web Trends – Boeing – EverBank – China Eastern						

Unit:6		Contemporary Issues	3 hours
Expert lectures, online seminars - webinars			
		Total Lecture hours	90 hours
Text Book(s)

Course Code	Machine Learning	L	T	P	C
Core/elective/Supportive	Elective - II	6	0	0	3
Pre - requisite	None	Syllabus version			2025-26 Onwards
Course Objectives					
• To explain about the basics of machine learning					
Expected Course Outcomes					
1	Understanding of the fundamental issues and challenges of machine learning: data, model selection, model complexity, etc.				K2
2	Understanding of the strengths and weaknesses of many popular machine learning approaches.				K2
3	Explain about the concepts of computational learning theory and dimensionality Reduction				K2
4	Appreciate the underlying mathematical relationships within and across Machine Learning algorithms and the paradigms of supervised and un-supervised learning.				K3
K1 – Remember K2 – Understand K3 – apply K4- Analyze K5 – evaluate K6- Create					
UNIT I	Introduction to Learning				18 hours
Algorithmic models of learning, Learning classifiers, functions, relations, grammars, probabilistic models, value functions, behaviors and programs for experience. Bayesian, maximum some posterior, and minimum description length frameworks.					
UNIT II	Learning Models				18 hours
Parameter Estimation, sufficient statistics, decision trees, neural networks, support vector machines, Bayesian networks, bag of words classifiers, N-gram models; Markov and Hidden Markov models, probabilistic relational models, association rules, nearest neighbor classifiers, locally weighted regression, ensemble classifiers.					
UNIT III	Computational Learning				18 hours
Computational Learning theory, mistake bound analysis, sample complexity analysis, VC dimension, Occam learning, accuracy and confidence boosting, Dimensionality reduction: Principal component Analysis, feature selection and visualization.					
UNIT IV	Unsupervised Learning				18 hours
Unsupervised Learning: Clustering, mixture models, k-means clustering, hierarchical clustering, distributional clustering, Reinforcement learning; Learning from heterogeneous, distributed, data and knowledge.					
UNIT V	Learning Applications				18 hours
Selected applications in data mining, automated knowledge acquisition, pattern recognition, program synthesis, text and language processing, internet-based information systems, human computer interaction, semantic web, and bioinformatics and computational biology.					
Total Lecture Hours					90 hours

Course code		Project Work Lab	L	T	P	C
Core/Elective/Supportive		Core Lab: 12	0	0	6	3
Pre-requisite		Students should have the strong knowledge in any one of the programming languages in this course.	Syllabus Version		2025-26 Onwards	
Course Objectives:						
The main objectives of this course are to: 1. To understand and select the task based on their core skills. 2. To get the knowledge about analytical skill for solving the selected task. 3. To get confidence for implementing the task and solving the real time problems. 4. Express technical and behavioral ideas and thought in oral settings. 5. Prepare and conduct oral presentations						
Expected Course Outcomes:						
On the successful completion of the course, student will be able to:						
1	Formulate a real world problem and develop its requirements develop a design solution for a set of requirements.					K3
2	Test and validate the conformance of the developed prototype against the original requirements of the problem.					K5
3	Work as a responsible member and possibly a leader of a team in developing software solutions.					K3
4	Express technical ideas, strategies and methodologies in written form. Self-learn new tools, algorithms and techniques that contribute to the software solution of the project.					K1-K4
5	Generate alternative solutions, compare them and select the optimum one.					K6
K1 - Remember; K2 - Understand; K3 - Apply; K4 - Analyze; K5 - Evaluate; K6 - Create						
AIM OF THE PROJECT WORK						
1. The aim of the project work is to acquire practical knowledge on the implementation of the programming concepts studied. 2. Each student should carry out individually one project work and it may be a work using the software packages that they have learned or the implementation of concepts from the papers studied or implementation of any innovative idea focusing on application oriented concepts. 3. The project work should be compulsorily done in the college only under the supervision of the department staff concerned. 4. The project work with 2 new modules to be designed, implemented and it should be completed.						
Viva Voce						
1. Viva-Voce will be conducted at the end of the year by both Internal (Respective Guides) and External Examiners, after duly verifying the Annexure Report available in the College, for a total of 100 marks at the last day of the practical session. 2. Out of 100 marks, 60 marks for project report, 20 marks for presentation and 20 marks for Viva Voce.

Abstract

Chapter I Introduction

1.1 An Overview

1.2 Objectives of the project

1.3 Organization project

1.4 Scope of the system

Chapter II System Analysis

2.1 Hardware Specification

2.1.1 About System Configuration

2.2 Software Specification

2.2.1 About Programming Language

2.3 Existing System (Minimum 1 page per module)

3.1.1 Module 1

3.1.2 Module 2

3.1.3 Module 3

2.4 Proposed System (Minimum 1 page per module)

3.1.1 Module 1

3.1.2 Module 2

3.1.3 Module 3

Chapter III System Development

3.1 Description of Modules

3.1.1 Module 1

3.1.2 Module 2

3.1.3 Module 3

3.2 Data Flow Diagram

3.2.1 DFD Module 1

3.2.2 DFD Module 2

3.2.3 DFD Module 3

3.2.4 DFD integration with all module if applicable

3.3 Input Design

3.3.1 Sample Input

- 3.4 Output Design
 - 3.4.1 Sample Output
 - 3.4.2 Screens and Reports
- 3.5 Data Base Design
 - 3.5.1 Table Design
- 3.6 Source Code
 - 3.6.1 Sample Code

Chapter IV System Testing and Implementation

- 4.1 System Testing
- 4.2 System Implementation

Chapter V Conclusion

- 5.1 Conclusion
- 5.2 Scope for the Future

Course code		SERVER ADMINISTRATION LAB	L	T	P	C
Core/Elective/Supportive		Skill based Subject Lab : 4	0	0	3	2
Pre-requisite		Students should have strong knowledge in Server administration	Syllabus Version		2025-26 Onwards	
Course Objectives:						
The main objectives of this course are to: 1. To understand server configuration. 2. To enable students to learn the basics firewall configuration. 3. To familiar with Sharing options 4. To learn about the user permissions						
Expected Course Outcomes:						
On the successful completion of the course, student will be able to:						
1	Understand the basics of server installation and maintenance.		K2, K4, K6			
2	Understand the concept of firewall		K2, K4, K6			
3	Understand and apply sharing permissions.		K2, K4, K6			
4	Understand resource sharing permissions		K2, K4, K6			
5	Develop multiuser settings		K2, K4, K6			
K1 - Remember; K2 - Understand; K3 - Apply; K4 - Analyze; K5 - Evaluate; K6 - Create						
Programs					36 hours	
1. Identify the functions needed for a network environment. (subtasks: understand reasons for Windows server 2003, understand components of Windows server 2003)						
2. Decide whether to migrate to Windows server 2003. (subtasks: evaluate the size, hardware/software, networking environment, security demand of the organization to decide whether to migrate.)						
3. Complete an installation checklist (subtasks: check system requirements, consider installation choices, prepare for installation, plan migration to Windows server 2003)						
4. Install Windows server 2003 (subtasks: choose setup method, run setup, configure the server)						
5. Install WINDOWS XP PROFESSIONAL (subtasks: clean install from new version, character based setup, GUI based setup, run upgrade, automate installation, create/use images)						

6. Install, configure, test trouble shoot RIS		
7. .Plan network		
8. Ensure that the network is properly set up (subtasks: set up network interface card, configure protocols, test network, setup DHCP, DNS and WINS, group permissions, user accounts)		
9. implement Active Directory (subtasks: install AD, replicate Ad among sites)		
10. use communication among the computers (subtasks: LAN) and connect to internet (subtasks: connect PCs with LAN, telephony connections, install/maintain Windows server 2003 router, internet connection, send/receive internet mail)		
11. use IIS 6 (subtasks: install IIS 6, customize/maintain IIS 6)		
12. install VPN (subtasks: use PPTP, layer two tunneling protocol, setup VPN server/client)		
13. use terminal services and Remote Desktop (subtasks: setup terminal service, activate/install client licenses, use remote desktop for administration)		
14. plan and use storage and file systems (subtasks: Use disk management, dynamic volume management, distributed file system, distributed file system, backup/restore)		
15. set up print services (subtasks: set up network printing, control que, manage fonts, set up fax service)		
16. use control panel, task manager, MMC, registry, group policy, local user profiles and update Windows server 2003.
