BHARATHIAR UNIVERSITY, COIMBATORE
M.Sc. ENVIRONMENTAL SCIENCES (UD)
From the Academic year 2017-18 onwards
SCHEME OF EXAMINATION

Title of the Paper			Durn.	Int.	Ext.	Total	Credit
Semester I							
CORE 1	17ENVA13A	Basics in Chemistry and Biology for Environmental Sciences	3	25	75	100	4
CORE 2	17ENVA13B	Environmental Pollution	3	25	75	100	4
CORE 3	17ENVA13C	Statistics and Research Methods in Environmental Management	3	25	75	100	4
CORE 4	17ENVA13D	Instrumental Methods of Analysis	3	25	75	100	4
ELECTIVE 1	17ENVA1EA	Environmental Toxicology (or) Occupational Health and Industrial Safety	3	25	75	100	4
SUPPORTIVE 1			2	12	38	50	2
Practical I	17ENVA13P1	Practical I	6	25	75	100	4
SEMESTER II							
CORE 5	17ENVA23A	Environmental Impact Assessment	3	25	75	100	4
CORE 6	17ENVA23B	Waste Management and Bioremediation	3	25	75	100	4
CORE 7	17ENVA23C	Biodiversity and Conservation	3	25	75	100	4
CORE 8	17ENVA23D	Green Products	3	25	75	100	4
ELECTIVE II	17ENVA2EB	Concepts of Industrial Ecology (or) Natural Hazards Disaster Management (Or) Environmental Geosciences	3	25	75	100	4
SUPPORTIVE II			2	12	38	50	2
Practical II	17ENVA23P1	Practical II	6	25	75	100	4
SEMESTER III							
CORE 9	17ENVA33A	Remote Sensing and GIS	3	25	75	100	4
CORE 10	17ENVA33B	Environmental Engineering	3	25	75	100	4

CORE 11	17ENVA33C	Environmental Laws and Policy	3	25	75	100	4
CORE 12	17ENVA33D	Natural Resources Management	3	25	75	100	4
ELECTIVE III	17ENVA3EC	Environmental Biotechnology (Or) Environmental Management and Sustainable Development	3	25	75	100	4
SUPPORTIVE III			2	12	38	50	2
PRACTICAL III	17ENVA33P1	PRACTICAL III	6	25	75	100	4
SEMESTER IV							
	Project work and viva-voce examination					150	6
	Self – study paper : Social Issues and Environment (or) Climate Change					50	2
	Industrial visit and Viva-voce examination					50	2
	Summer project					50	2
		TOTAL				**2250**	**90**

SUPPORTIVE PAPERS OFFERED FOR OTHER DEPARTMENT STUDENTS:

Semester	Subject Code	Title of the Paper	Durn	Int.	Ext.	Total	Credit
I	17ENVGS18	Ecotourism	**2**	12	38	50	2
II	17ENVGS53	Natural Disaster Management	**2**	12	38	50	2
III	17ENVGS03	Environmental Education and Awareness	**2**	12	38	50	2

Note :

1. Practical paper is offered as one single paper with a common code, encompassing all core papers for a given semester, for the University examination with 4 credits.

2. Equal number of experiments to be fixed for all papers.

SEMESTER I

CORE I 17ENVA 13A: BASICS IN CHEMISTRY AND BIOLOGY FOR ENVIRONMENTAL SCIENCES

Objectives: To expose the students from non-chemistry and non-biology background to the chemistry and biology aspects required for environmental sciences

UNIT I

Periodic table, elements, compounds, IUPAC nomenclature of simple organic and inorganic compounds, chemical bond, chemical reactions. Normality, molarity, molality, molecular weight, equivalent weight, mole concept, stoichiometric Equations. Volumetric analysis, calculations, acid-base indicators. Avogadro hypothesis, isotopes, oxidation, reduction, oxidation number.

Unit II

Solutions - types, ionization, primary and secondary standards - preparations, calculations of concentrations of solutions using specific gravities and molecular weights, units of concentration of solutions – interconversions. Colligative Properties, Ionic product of water, pH and pOH, buffer solutions. Laws of thermodynamics, reversible and irreversible processes, thermodynamic functions, exothermic and endothermic reactions, spontaneous and nonspontaneous reactions.

Unit III

Faraday's law of electrolysis-conductance (equivalent and molar conductance). Laws of mass action and Applications, Le-Chatlier Braun principle. Principles of photochemistry, fluorescence, phosphorescence, photochemical and photosensitized reactions, energy transfer – examples. Organic compounds - hydrocarbons, functional groups, nucleophiles and electrophiles. Surface and interface chemistry - Adsorption, absorption, catalysis, colloids, surfactants, examples, types of adsorption, desorption.

UNIT IV

Cell structure and function- structure and function of cell wall, structure and composition of cell membrane, ultrastructure and function of cell organales, eukaryotic and prokaryotic cells, Nucleic acids-DNA structure and replication, cell growth and division-Meiosis and Mitosis, genotypes and phenotypes, permeability, diffusion, osmosis, absorption of water, transpiration, photosynthesis, Respiration, translocation of solutes, Photoperiodism and vernalisation, plant movements, Dormancy, senescence, Cryopreservation.

UNIT V

Introduction to Animals, Importance of systematics, Using Taxonomic Keys, Identification Procedure. Theories of animal classifications and their history; Procedure in classifying; Phylogeny; Zoological Nomenclature, ICZN; Animal diversity; Animal systems: skeletons and mussels, circulatory and respiratory systems. Botanical nomenclature: Need for scientific names, history of botanical nomenclature, principles of ICBN, the type method, author citation,

publication of names, Process of Identification: Specimen preparation, herbarium methods, and identification methods; Botanical gardens.

22. Plant Taxonomy and Biosystematics, Stace, C.A. (1989), 2nd E,. Edward Arnold, London.

SEMESTER I
CORE 2 17 ENVA13B: ENVIRONMENTAL POLLUTION

Objectives: To educate the students on pollution of water, air and soil, impacts of pollution and control measures.

UNIT- I

Structure of the atmosphere, Sources and Classification of Air Pollutants. Transport and Diffusion of Pollutants. Plume behavior and stack dispersion, Reactions of hydroxyl radical with O2, N2, CO2 and Oxides of Nitrogen, Sulphur and Carbon. Sinks of Air pollutants – Acid rain: Ozone depletion – Montreal protocol; Global warming – Kyoto protocol; Gaseous pollution control measures; photo chemical smog; Automobile pollution in India; Zero emission standards; Particulate matter pollution – PM 10 and PM 2.5 – Cleaner technologies – online monitoring of pollution

UNIT - II

Properties of water – water quality. DO, BOD, COD, acidity, alkalinity, salinity, hardness; drinking water quality standards; Water pollution; Classification of water pollutants, Ground water pollution, Sources and sinks, Eutrophication. Purification of water by adsorption, flocculation, ion exchange and reverse osmosis methods. Alternatives of end of pipe treatments, Online monitoring of industrial effluents - Radioactive pollution and control measures. Marine pollution- sources & control.

UNIT - III

Soil pollution; Sources, sinks and broad classification, movement and sorption mechanisms of organic and inorganic contaminants and their impacts on physio-chemical and biological properties of soil and plants, Sediment Pollution – Black carbon – Soil pollution control measures – Physico-chemical and Biological methods.

UNIT – IV

Hazardous Solid Wastes – Hospital Wastes, Radioactive Wastes - Sources, Transport, Disposal. Municipal solid wastes - hazards, disposal and energy production- Case studies; Light pollution and control measures; and Thermal pollution and control measures. Noise pollution – Sensing, Measurement, Abatement measures.

UNIT V

Industrial Disasters and Pollution - remedial measures – Case studies-Chemical Industries – Pesticide Industries, Bhopal Disaster, Chernobyl accident, Love canal Disaster, Oil Disasters – Exxon, British Petroleum- Gulf of Mexico; e-wastes, Impact and Remedial Measures.

CORE 3: 17ENVA13C

STATISTICS AND RESEARCH METHODS IN ENVIRONMENT AL MANAGEMENT

Objective: To impart understanding on the concepts of statistics and to improve the Computing knowledge of the statistical methods related to environment

UNIT - I

Fundamentals of Statistics (Basic concept) – Collection of Data – Classification and Tabulation – Diagrammatic Representation – Measures of Central Tendencies and Dispersion – Probability – Moments, Skewness and Kurtosis – Normal, Poisson and Binomial Distributions.

UNIT – II

Sampling Methods: Probability sampling, random sampling, systematic sampling, stratified sampling, cluster sampling and multistage sampling. Non-probability sampling: convenience sampling, judgement sampling, quota sampling.

UNIT – III

Tests of Significance – Mass and alternative hypothesis – error level of significance – Equal and Unequal Sampling - t, z, x2 test, Analysis of variance – One way ANOVA – Two way ANOVA – Regression and correlation - simple and multiple. Introduction to environmental system analysis, Approaches to development of models, models of population growth and interaction-various models.

UNIT – IV

Applications of Computer in Environmental Science and Management – Data Analysis using packages (SPSS): Editing, Data Tabulation, Descriptive statistics, Multivariate Analysis – Correlation – Regression –Cluster analysis – Factor Analysis -PCA, Graph Plotting, Computational databases and environmental management.

UNIT - V

Scientific documentation: Methods of literature collection, design, planning and execution of investigation, Preparation of scientific documents, general articles, research papers, review articles, editing of research papers, methods of citation, collection of literatures, including web based methods, bibliography and thesis writing. Presentation techniques, effective communication skill.

13.Introduction to Research Methodology in Agricultural and Biological Sciences, V. Venkatasubramanian (1999), New Century Book House (P) Ltd., Chennai

CORE 4 – 17ENVA 13D: INSTRUMENTAL METHODS OF ANALYSIS

Objectives: To impart understanding on principles, instrumentation and applications of various instrumental methods in the analysis of chemicals responsible for the pollution of the environment

UNIT - I

Spectroscopic Techniques: Properties of EMR – Basic Principles, Instrumentation and applications of: Ultraviolet – visible (UV-VIS) Spectroscopy, Infrared spectroscopy, FT-IR, Flame Spectrometry; Atomic Absorption spectroscopy (AAS) – Inductively Coupled Plasma Emission Mass Spectroscopy (ICP-MS), Mass spectrometry, Nuclear magnetic resonance spectroscopy (NMR), Electron paramagnetic resonance (EPR), Flourimetry – Chemiluminescence's Detector System, X-Ray Fluorescence, Microscopy, SEM, TEM, Online analyzers.

UNIT - II

Chromatographic Techniques: Basic principles, Instrumentation and applications of Chromatography – paper, thin layer chromatography (TLC), Gel permeation chromatography, Ion exchange chromatography – High performance liquid chromatography (HPLC) and Gas Chromatography (GC)-Electrophoresis-SDS-PAGE, Agarose gel electrophoresis, 2D-Electrophoresis, PCR, Types of Centrifuge-high speed refrigerated centrifuge.

UNIT – III

Radiochemical analysis: Types of radiation – radioactive decay; Carbon dating; Radioactive labeling – Isotope dilution, Radiation detectors – Geiger Muller Counter, Scintillation counters; Application of isotopes in biological and environmental studies, Neutron activation analysis.

UNIT - IV

Electrochemical Techniques: Introduction to Techniques – Basic principles, Instrumentation and applications of Conductometry, Potentiometry – Ion selective meter – Voltammetry – Polarography; Coulometry.

UNIT - V

Turbidimetry and Nephelometry, Elemental analyzer, TOC analyzer, Portable Gas Analysis – H_2S, CO_2, SO_2, O_3, HC, Particulate analysis, Stack monitoring, Meteorological equipments.

ELECTIVE I- 17ENVA1EA: ENVIRONMENTAL TOXICOLOGY

Objectives: To impart understanding on the basic concepts of toxicology, the mode of action of chemicals and their fate in the environment

UNIT – I

Toxicology – Definitions, Major classes of environmental toxicants, Origin and Nature of Toxicants in Environment. Basic Probit analysis, concepts – Toxicants – Toxicity, Acute, sub acute, chronic, dose effect, LD 50, LC 50 and response safe limits. Dose response relationship, graphs, concentration response relationship, Safe Limits. Biological, chemical Factors that influence. Influence of route of administration abnormal response to chemicals; basis of selective toxicity; laboratory determination of toxicity of chemicals.

UNIT – II

Pest – Pesticides – Classification of pesticides – Pest surveillance, resistance, residual effects, toxic effects of insecticides on man and mammals. Metals- Toxicity, Properties, occurrence, Production, Industrial uses, Metabolism, Physiology, Toxicology, Prophylaxis and Therapy - Aluminium, arsenic, cadmium, chromium, lead and mercury. Mutagenesis and carcinogenesis - case studies. Emerging pollutants in environment-Pharmaceuticals and personal care products.

UNIT – III

Chlorinated xenobiotics in environment – Bioconcentrations – Volatilization – Biological and nonbiological degradations, Detoxification. Chlorinated organics in environment and their fate. Short chained chlorinated hydrocarbons – Toxicity – Ecotoxicological relevants and degradation. PCB – Dioxins levels, fate, toxicity and their global distribution. Toxaphene – occurrence and degradation. Environmental risk assessments- Biomonitoring - Bioindicators- Environmental specimen banking.

UNIT – IV

Bioaccumulation – Bioconcentration – Biomagnifications –mechanisms in biota – Significant influence, mechanisms and Kinetics of Bioconcentration. Cellular response to chemical stress – membrane process; intracellular fate of chemicals, cell receptors, cell injury and apoptosis. Long-term impact of chemicals in aquatic organisms, soil invertebrates and Avian species.

UNIT – V

Ecotoxic modes of action of chemicals: Biotransformation of xenobiotics – Molecular mode of action – Toxicity Testing Methods – Microbiol, algal, invertebrates and alternative toxicity tests. Multimedia mass balance models – fugacity – nonfugacity models – applications of multimedia models. Future test strategies in Ecotoxicology – Legislative perspectives. Animal management in Toxicological Evaluation: Animal extrapolation; Animal ethics.

ELECTIVE I - 17ENVA1EA
OCCUPATIONAL HEALTH AND INDUSTRIAL SAFETY

Objective : To impart knowledge on various occupational health hazards and safety measures to be taken in the work place.

UNIT - I

Occupational Health - Hazards and Safety –Physical, Chemical and Biological hazards. Occupational Diseases and Occupationally induced illness - Prevention and Control. Health problems in different types of industries – construction, textile, steel and food processing, pharmaceutical, Occupational Health and Safety considerations in Wastewater Treatment Plants. Measures for Workers. Health Education Medical First-Aid and Management of Medical Emergencies. Epidemiological approaches. Ergonomics – Need, Task Analysis, Preventing Ergonomic Hazards, Ergonomics Programme. Definition and Role of Ergonomics in Designing Work Place - Work Environment - Effects of Light, Ventilation, Vibration, Noise and stress - Performance Evaluation of Man.

UNIT – II

Industrial Safety Management Techniques – Industrial Safety Standards. Industrial Accidents and Disasters - Frequency Rate, Prevention and Control. Dispersion of Radioactive material and release of Toxic and inflammable materials. Work Study - Method of Study and Measurement. Measurement of Skills. Safety - Cost of Expenses. Principles and Functions in Safety Management. Case Study - Preparation of report on safety and remedial measures followed in Industry.

UNIT III

Hazards Exposure evaluation: Sampling techniques, Personal monitoring, Biological monitoring; Threshold Limit Values (TLV), STEL; List of Industries involving Hazardous process Occupational Hazards under the First Schedule of the Factories Act,1948; Permissible Limits of certain Chemical substances in work environment under the Second Schedule of the Factories Act,1948; Hazards Control : Elimination, Control , Substitution, Isolation, Personal Protective Equipment(PPE).

UNIT IV

Hazards Control- Causes of Accident - Accident statistics - Accident Reporting system, Safety Audit, Accident prevention, Disaster Planning, Safety Committee, Case studies on Bhopal, Chernobyl and similar disasters - Control of Hazards Substitutions, Engineering control, Administrative control, Behaviour control, integrated control, Elimination, Control , Substitution, Isolation, Personal Protective Equipment (PPE).

UNIT V

Labour laws - Occupational Safety and Health Act and Health Administration, Right to know Laws- Indian Acts – Labour Act, Factories Act, OSHA. Parameters of safety – Factors affecting the conditions of occupational and Industrial safety – Concept of safety organization and Management - Safety Regulations - Supervisors and safety department in motivation.

SEMESTER II

CORE 5 – 17ENVA23A

ENVIRONMENTAL IMPACT ASSESSMENT

Objectives: To expose the students to the recent methods, programmes and projects, preparation of EA and EIA reports and institutional requirements of assessment of environmental impacts of policies and plans.

UNIT - I

Objectives – Basis for Environment Impact Assessment, Screening of Projects – Environmental Assessment Procedures – Writing the Environmental Assessment and Checklists, Concept and Significant Impact – Case Studies - Project Alternatives.

UNIT - II

EIA Methodologies – Adhoc Method – Checklist Methods – Matrix Methods – Network Methods The Environmental Impact Statement Process. – Preparing EIS – Environmental Management Plan (EMP).

UNIT - III

Procedure for reviewing impact analysis and structure- Prediction and Assessment of Impacts on natural Resources – Biota, Surface Waters, Ground Water, Air, Noise, Hazards, Historic and Cultural Resources, Transportation, Socio-economic relationships. Interlinking of rivers and River Basin Management.

UNIT - IV

Guidelines for environmental audit, Notification – 1994, 2006, 2012 – Public Participation, Regional and Sectoral Impact Assessment, Major limitations of Environmental Impact Assessment.

UNIT - V

Case studies - Land Clearing Projects – Dam sites – EIA for Aquaculture, Steel, Mines, Hydel, Thermal, Nuclear, Oil and Gas based Power Plants – Highways projects – Industrial Projects.

CORE 6 – 17ENVA23B
WASTE MANAGEMENT AND BIOREMEDIATION

Objectives: To impart knowledge on the management of solid and liquid wastes from municipal and industrial sources and principles of remedial measures of recycling, reuse and recover from the wastes.

UNIT - I

Wastes– Classification and Quantification – Solid Waste Management and Disposal: Sources and Generation of Solid Waste – characterization, composition and classification. Hazardous Waste Management: Cyanides, Dioxins, Detergents, Plastics, Nylon and Paper. Waste Minimization approaches – Monitoring and Management strategies. Radioactive Waste: Sources, half life of radioactive elements, modes of decay. Effects on Plants, Animal and Man. Low and High-level Radioactive Waste Management – Waste Minimization and Treatment, Radiation standards.

UNIT - II

Recycling of Wastes – Types – sources – composition of waste – recycling of waste for Industrial, Agricultural and Domestic Purposes; Recycling of Metals, Reuse, recovery and reduction of paper and plastics; Recycling in Food Manufacturing, Beverages, Apparel, Leather, Paper, Pulp, Chemical and other industries; Fly Ash utilization. Waste Disposal Methods – incineration, pyrolysis, medical waste disposal strategies. Strategies for conversion of biodegradable waste into organic fertilizers and fuels. Composting, Vermicomposting and biomethanization.

UNIT - III

Microbial Activity in Soil, Lithosphere as Microbial habitat, Microorganisms in rock and minerals, Mineral soil and Organic soil. Physiological groups of prokaryotes, Geomicrobial transformations – Biodegradation of carbonates – Biomobilization of silicon, phosphate, nitrogen. Geomicrobiology of fossil fuel, methane, peat, coal and petroleum.

UNIT – IV

Principles of Bioremediation – Rapid growth and Metabolism- Genetic plasticity – Metabolic pathways for the degradation of xenobiotics, hydrocarbons – Microbial site characterization –

Biodegradation potential – Bioprocess design, optimization – Microbial removal rates – inherent problems associated with biotreatment studies. Microbiological methodologies – Standard biotreatability protocols – Quantification of biodegradation; Biocleaning -Chernobyl radioactive contaminated area - Phytoremediation.

UNIT - V

Aerobic Bioremediation: Bioremediation of Surface Soils: Fate and transport of contaminants in the Vadose zone – Biodegradation in soil ecosystems – Types of soil treatment systems – Bioreactors. Subsurface Aerobic Bioremedidation: *in situ* Bioremediation – *in situ* Bioventing – *in situ* treatments of Harbour Sediments and Lagoons. Bioremediation in fresh water and marine systems: Bench and Pilot Scale studies – *in situ* Bioreactor treatment of sediments – *in situ* treatment in marine ecosystem. Anoxic/Anaerobic Bioremediation: Anoxic/Anaerobic Processes –Fermentation, Degradation of xenobiotics – Anoxic/Anaerobic bioremediation of hydrocarbons, Phenols, Chlorophenolic compounds, Polycyclic Aromatic Hydrocarbons (PAH), Heterocyclic Compounds, Cyanide, dyes, Radioactive wastes.

CORE 7: 17ENVA23C BIODIVERSITY AND CONSERVATION

CORE 7: 17ENVA23C BIODIVERSITY AND CONSERVATION Objectives: To impart understanding on the occurrence and distribution of various flora and fauna, their existence and conservation

UNIT 1 -Scope and Constraints of Biodiversity Science

Biological Diversity: Species – Origin of new species, Description of new species, Community and ecosystem diversity, Genetic diversity- The Hardy-Weinberg law; genetically effective populations size, Gene flow-Genetic pollution and gene erosion, Systematics in Diversity – Environment and Genetic Variations – Biological Classification – Phylogenetic Relationship – Ecological Biodiversity –Species Concept – Biological and Phylogenic Concepts; Species Inventory – Biodiversity hot spots. IUCN categories– Red data book.Case Studies – Deciduous Forests - Desert Lizard communities – Marine and Coral Reef - Fish Communities -Island species — Western and Eastern Ghats – Himalayas

UNIT II -Species Diversity

Global Distribution of Species - Tropical species diversity – Diversity in terrestrial, marine and freshwater –Micro-organisms-lower and higher plants – lower and higher invertebrates and vertebrates; Species extinction and Endangered species; Monitoring indicatorspecies and habitats; Threats to biodiversity: Extinction – Past rate of Extinction – Human Caused Extinctions – Endemic species - Extinction rates - Man and animal conflicts.

UNIT III -Habitats and Ecosystem

History of ecosystem ecology, Human induced Ecosystem change, Urban Ecosystem Classification – Ecosystem mapping, tropical forests, grasslands, wetlands, coral reefs, mangroves; Habitat lass: Habitat destruction – Fragmentation and degradation – desertification – Habitat restoration;Invasive Species: their introduction pathways, biological impacts of invasive species on terrestrial and aquatic systems; Pollution: Impacts of Pesticide pollution, Water pollution and Air Pollution on biodiversity;Overexploitation: Impacts of Exploitation on Target and Non-target Terrestrial and Aquatic species and Ecosystems

UNIT IV -Values of Biodiversity

Instrumental/Utilitarian value and their categories, Direct use value;Indirect/ Non-consumptive use value, Introduction to Ecological Economics; Monetizing the value of Biodiversity;Intrinsic Value;Ethical and aesthetic values, Anthropocentrism, Biocentrism, Ecocentrism and Religions;Intellectual Value;Economics of Ecosystem, Green Revolution, Food Plants, medicinal and ornamental plants, animal uses – livestock and fisheries.

UNIT V -Conservation and Management

National Legislation – Protection of Wild flora and Fauna -Protection of National Habitats - National and International Protected Areas – Current Practices in Conservation - in *situ* Conservation and *ex situ* Conservation of Threatened Species – Biodiversity Act 2002 – Patent Act – Agenda 21 – Forest protection Act-Forest conservation Act 1980-Multilateral Treaties – Biodiversity Conventions. Environmental ethics – Biodiversity – a Socio – Political Perspective; Community conserved Areas (CCAs) - Range sand significance of CCAs,

CORE 8: 17ENVA23D
GREEN PRODUCTS

Objectives: To educate students about how the industrial ecology can be exploited to create zero emission

UNIT I

Industrial Ecology and Waste Minimization Waste Management for Resource Recovery, Recycling, Waste Oil Utilization and Recovery, Recovery of solutes from Wastewater, Recovery of Water from Wastewater, Solvent Recovery

UNIT II

Industrial Ecology and Waste Treatment Physical methods of waste Treatment, Chemical Treatment of Wastes, Acid/Base Neutralization, Chemical Precipitation, Chemical Flocculation, Oxidation/Reduction, Electrolysis, Chemical Extraction, Chemical Destruction of PCBs, Biological Destruction of PCBs, Photolytic reaction, Thermal Treatment

UNIT III

Industrial Ecology of Waste Disposal Immobilization, Chemical Fixation, Physical Fixation, Ultimate Disposal, *In Situ* Treatment

UNIT IV

Earth System Engineering and Management[ESEM] Concept, Examples of ESEM, Implemented and Proposed – Brownfield Restoration, Dredging the waters, Restoring Regional Scale Wetlands, Combacting Global Warming, The Principles of ESEM –Theoretical, Governance principles of ESEM, Design and Engineering Principles of ESEM

UNIT V

Future of Industrial Ecology Industrial Ecology in the Midst of Change, The Industrial Ecology Hardware Store – Tools for Product and Process, Service Provider, Systematist and Policy Maker, Industrial Ecology as an Emerging Science, An Industrial Ecology Research Roadmap

REFERENCES

1. Industrial Ecology: Environmental Chemistry and Hazardous Wastes, Stanley E Manahan, (1999). Lewis, New York, USA.
2. Industrial Ecology. T. E. Graedel and B. R. Allenby, (2003). Printice Hall, New Jersey, USA.

ELECTIVE II - 17ENVA2EB
CONCEPTS OF INDUSTRIAL ECOLOGY

Objectives: To educate students about the new concepts of treating industrial systems analogues to forest ecology to achieve zero pollution status

UNIT I

Principles of Industrial Metabolism The astrosphere and industrial ecology, Industrial metabolism and biological analogies, material and energy flow in industrial metabolism, industrial metabolism, internalization of materials cycle, system integration and industrial metabolism, Eco-efficiency.

UNIT II

Industrial Ecosystems Components of the industrial ecosystem, overview of an integrated industrial ecosystem or symbiosis, examples of symbiotic industrial ecosystems, designing and developing symbiotic industrial ecosystem.

UNIT III

Life Cycles: Products, Processes and Facilities Life Cycles: Expanding and Closing the Materials Loop, Life Cycle Assessment, Materials and Product Budgets, Consumable, Recyclable and Service Products, Design for Environment, Design for Recycling, Kinds of Materials Recycled, Efficient use of materials through Industrial Ecology

UNIT IV

Status of Resources Depletion Times, Under abundant Resources, Hitchhiker Resources, Energy Resources, Energetically Limited Mineral Resources, Geographically Influenced Resource Availability, Environmentally Limited Resources, Cumulative Supply Curves, Water Resources.

UNIT V

Industrial Product and Process Design The Product and Process Challenge, Conceptual Tools for Product Designers, Design of X, Product Design Teams, The Product Realization Process, The Process Life Cycle, Approach to Process Analysis, Guidelines for Process Design and Operation, Implications for Corporation.

REFERENCES

ELECTIVE II - 17ENVA2EB

NATURAL HAZARDS AND DISASTER MANAGEMENT

Objectives: To educate the students about the different types of natural hazards and disaster management.

UNIT – I

Natural Disasters –Educative – trends in climatology, meteorology and hydrology. Seismic activities. Changes in Coastal zone, coastal erosion, beach protection. Coastal erosion due to natural and manmade structures.

UNIT II

Disasters – Nature and characteristics Cyclone – Tornadoes – Avalanches – Flood –Drought – Volcanic – Earthquakes – Fire – Landslides – Causes and effects - Impact on Environment Forecasting and Warning System – Disaster Profile of India.

UNIT - III

Disaster Management. Predisaster Planning-Toning of Disaster – prone areas – prioritization – regulations – protection measures during disaster and Post disaster. Relief Camp Organization – Survey and Assessment. Disaster Management Cycle – Vulnerability Analysis – Disaster Training – Legal Aspects – case studies for disasters and management. Technology for Disaster Management – Role of Information and communication technology, GPS, Remote sensing and Geographic Information system in Disaster Management.

UNIT - IV

Disaster Preparedness and Training. Community Preparedness in Natural Disasters- Role of information, education, communication and training- Roles and responsibilities of different national and international agencies and government - NGO, Armed forces, Paramilitary forces, Community based organizations (CBO) - Army Training for Disaster Reduction –Role of team and co-ordination -Training needs.

UNIT V

Mitigation Strategies: Disaster Mitigation – emerging trends in disaster management - UN draft resolution on Strengthening of Coordination of Humanitarian Emergency Assistance, International Decade for Natural Disaster Reduction (IDNDR), Policy for disaster reduction, problems of financing and insurance. Training for emergency. Regulation/guidelines for disaster tolerance building structures.

ELECTIVE III - 17ENVA2EB
ENVIRONMENTAL GEOSCIENCES

Objectives: To educate the students about Earth , Geochemistry, Mineral and Water resources of the environment.

UNIT- I

The earth systems and Biosphere: Conservation of matter in various geospheres – lithosphere, hydrosphere, atmosphere and biosphere. Energy budget of the earth. Earth's thermal environment and seasons. Ecosystems flow of energy and matter. Coexistence in communities-food webs., Earths'major ecosystems terrestrial and aquatic. General relationship between landscape, biomes and climate. Climates of India, Indian Monsoon, El Nino, Droughts. Tropical cyclones and Western Disturbances.

UNIT- II

Earth's Processes and Geological Hazards: Earths processes; concept of residence, time and rates of natural cycles. Catastrophic geological hazards. Study of floods, landslides, earthquakes, volcanism and avalanche. Prediction and perception of the hazards and adjustments to hazardous activities.

UNIT- III

Mineral Resources and Environment: Resources and Reserves, Minerals and Population. Oceans as new areas for exploration of mineral resources. Ocean ore and recycling of resources. Environmental impact of exploitation, processing and smelting of minerals.

UNIT- IV

Water Resources and Environment: Global Water Balance. Ice sheets and fluctuations of sea levels. Origin and composition of seawater. Hydrological cycle. Factors influencing the surface water. Types of water. Resources of oceans. Ocean pollution by toxic wastes. Human use of surface and groundwaters. Groundwater pollution.

Landuse Planning: The landuse plan. Soil surveys in relation to landuse planning. Methods of site selection and evaluation.

UNIT- V

Environmental Geochemistry: Concept of major, trace and REE. Classification of trace elements, Mobility of trace elements, Geochemical cycles. Biogeochemical factors in environmental health. Human use, trace elements and health. Possible effects of imbalance of some trace elements. Diseases induced by human use of land.

SEMESTER III

CORE 9: 17ENVA33A

REMOTE SENSING AND GIS

Objective: To teach the principles and applications of spatial information technologies viz RS, GPS and GIS about the distribution of resources. To give hands-on training on the uses of GIS software in environmental studies

UNIT - I

Elements of photographic systems and computer applications. Land stat. IRS and other satellite systems- satellite data. Principles involved in thermal IR image and microwave image interpretation. Applications of different types of images in earth Sciences, Environmental Sciences, Archeology, Marine studies, Forestry, Soils, Hazard management etc.

UNIT - II

Concepts and foundations of remote sensing - History of remote sensing - Electro-magnetic energy – Properties and interaction with the earth. Atmospheric windows. Black, white and grey bodies, sources of EMR. Image interpretations. Aerial photo-classification based on attitude of camera lens, distortions caused due to flight irregularities, overlaps, scale, relief displacement and its effects. Photo recognition elements. Different types of photographs.

UNIT - III

Introduction to Geographical Information Systems and GIS software, Fundamentals of GIS: Layers and features, Raster/Vector- Georeferencing and projection, Spatial data and GIS basics; Data attributes and spatial topology, Projection / Image registration, Digitization and data attributes -map data representation, GPS.

UNIT - IV

GIS Applications: Resources mapping, Inventory and monitoring natural resources, Land cover mapping, Wetland mapping – Applications to Agriculture - Water Management, Specific Applications - Infrastructure – Ground Water. GPS applications – Principles of Accuracy – Database Creation – Networking of Data.

UNIT - V

Remote sensing applications – Impact Assessment – Pollution Monitoring – Water – Air –Ocean Pollution – Land Degradation – Desertification – Industry – Mining – Ground Water Modeling – Damage Assessment – Coastal and Marine applications – Future Sensors – Satellite System – ENVISAT – Megha Tropiques – TRMM – EOS Missions – Integral Earth Observation Studies – Global Change-Case studies.

CORE 10: 17ENVA33B
ENVIRONMENTAL ENGINEERING

Objectives: To educate the students about concepts of designs of water distribution systems, sewer networks, working principles and design of various physical, chemical and biological treatment systems of water and waste water.

UNIT - I

Physico chemical and biological characteristics of waste water, Primary, Secondary and tertiary treatment of waste water-. Flow measurement- Hydraulics – Pressure- Hydrostatic Pressure, Pressure Head, Measurement of Pressure, Flow, Design of Pressure Pipes – Darcy – Weisbach Formula, Manning's Formula, Hazen – William's Formula – limiting velocities, Minimum and Maximum Test Pressure and Working Pressure in pipes – selection of pipe material – Pump types, Characteristic Curves – selection and determination of capacity.

UNIT - II

General layout of Water Treatment Plant. Flash Mixer – Design – Clariflocculator – parameters for design – Filtration - Rapid sand filter and Pressure filter and Disinfection -calculation of chlorine dosage, chlorine demand, and residual chlorine.

UNIT - III

Physical and Chemical Unit Operations and Applications – Design Parameters and Design of Primary and Secondary Settling Tanks – Activated Sludge Process – types and modifications – Design of Aeration Tanks– Diffusers and Mechanical Aerators. Trickling Filters and Design. Oxidation Ditch and Duncan Mara Systems (Waste Stabilization Ponds).

UNIT - IV

Sludge Processing and Disposal Methods – Design of Anaerobic Digester and Sludge Drying Bed – Reverse Osmosis – Ion Exchange – Incinerators and Multiple Evaporators.

UNIT - V

Air Pollution – Minimum Stack Height – Plume Rise, Ground Level Concentration of Pollutants. Design of Settling Chamber, Cyclones, Fabric filters and Electrostatic Precipitators. Wet Scrubber. Case studies: Distillery, Dyeing, Electroplating, Paper and Pulp, Steel, Tannery - Industrial Effluent Treatments.

CORE 11 – 17ENVA33C: ENVIRONMENTAL LAW AND POLICY

Objectives: To impart knowledge about environmental laws, regulations and policies of India and international environmental laws

UNIT I

Environmental policy in Ancient India, Medieval India, British India, during post independent era, the seventies, eighties and nineties. International environmental policy – environmental problems and their impact on international system, the instruments of international environmental policy – international law, soft law, scientific cooperation - fund support, sanction, dispute settlement procedures, non state actors and international environmental policy - Transnational environmental policies – the Indus river basin, the Ganga – Brahmaputra river basin system

UNIT II

Environmental planning, trends in planning, concepts and approaches and strategic environmental planning and management. International Environmental laws - hazardous wastes-Basal convention – Necessity for International Environmental Court. Ecolabelling, United Nations Environment Programme [UNEP] role on international environment laws. Case studies for International environmental disputes. Land use planning, urban planning for India.

UNIT III

Constitutional and legislative provisions : constitutional provisions and the environment, environmental protection and fundamental rights, judicial remedies and procedures – Tort law, public nuisance, the writ jurisdiction, statutory remedies, public interest litigation, class action, freedom of information and the right to know.

UNIT IV

Indian legislation to protect the environment: The water act of 1974, The Water Cess act of 1977, The wildlife Act of 1972, the air act of 1981, The public Liability insurance act of 1991, the natural environmental tribunal act of 1995, the national environment appellate authority act of 1997, the mines and minerals act of 1957. Case studies one each in the protection of forests, rivers and wild life.

UNIT V

The Indian forest act of 1927, the forest (conservation) act of 1968, The atomic energy act of 1962, The factories act of 1948. The environmental protection act of 1986, The national environment appellate authority act of 1997. The forest conservation act 1980, The wildlife protection act 1972 (2002 amendment), - Plastics Waste management Rules 2015.

CORE 12: 17ENVA33D
NATURAL RESOURCES MANAGEMENT

Objectives : To enrich the knowledge on natural resources and their significance and to know the strategies for sustainable management

UNIT I

Natural resources: Concept and types of natural resources, classification of natural resources. Factors influencing resource availability, distribution and uses. Interrelationships among different types of natural resources. Concern on Productivity issues - ecological, social and economic dimension of resource management.

UNIT II

Land and Water Resource: soil types, profile and composition, degradation of land and soil-agricultural lands - Land use and land cover, impacts of land use on environment – man-induced landslides; wetland ecology & management.

Major water resources- surface and ground water - distribution and supply- hydrological cycle, Causes of water resource depletion - Use and over use of water resources, water resource management - Ground water recharging, rain water harvesting; Watershed management Concept, and objectives, flood control-Dams; Wetlands: definition, importance and classification.

UNIT III

Mineral and Energy Resources: Types, distribution and reserves of mineral resources, - use and exploitation - environmental effects of mining – case studies - Resource extraction, access and control system – Ecological, economic, and ethnological approach and their implications; integrated resource management strategies.

UNIT IV

Forest and Energy resource: Types and extent of forests in India - deforestation and conservation strategies; Importance of natural areas - carbon sequestration; forest fragmentation, national forest policy; Biodiversity- conservation strategies, global biodiversity hotspots; threatened and endemic species-Developing and developed world strategies for forestry.

World energy demand – renewable, non-conventional, nuclear energy, tidal energy- alternate energy sources- solar and wind energy- Oil and natural gas, coal, biomass energy, geothermal energy, hydropower; Environmental implication of energy use.

UNIT V

Management of Common International Resources: Ocean, climate, International fisheries and management commissions; Antarctica: the evolution of an international resource management regime – case studies – Resource management in mountain ecosystem – management of marine and coastal ecosystem .

ELECTIVE III 17ENVA3EC
ENVIRONMENTAL BIOTECHNOLOGY

Objectives : To impart knowledge in molecular biotechnology and its applications in Environmental management

UNIT-I

Technology for Bioremediation: Recombinant DNA Technology, development of genetically engineered microorganisms (GEMs), Polymerase Chain Reaction (PCR) and development of gene probes for environmental remediation*:* Role of genetically engineered plants and microbes (GEMs) in *In-situ* and *Ex-situ* bioremediation. Suicide genes. Micro-electromechanical systems (MEMS), Genosensor technology.

UNIT-II

Xenobiotics and Biodegradation: Xenobiotics, biodegradation of Polychlorinated biphenyls (PCBs). Biodegradation of halogenated hydrocarbons; polycyclic aromatic hydrogen; Pesticides and Detergents. Biosorption of heavy metals, degradation of oil spills, plastic degradation by microbes.

Industrial Biotechnology: Fermentation Technology-submerged and solid state fermentation, advantages of SSF. Applications of Enzymes in bakery, detergents, textile, leather, pulp and paper manufacturing industries.

UNIT-III

Biotechnology for Resource Management : Bio-transformation of heavy metals ; Oil field microbiology; Improved oil recovery; Role of environmental biotechnology in resource management – Bioremediation – energy production - mineral and energy recovery, Nanotechnology for control of pollution - Planning and management of bioremediation and environmental biotechnology processes

UNIT-IV

Forestry and Biotechnology: Forestry and Biotechnology:- Reforestation through micro-propagation; Somaclonal variations; Induction of genetic variability and heriditability; Conservation of endangered species; Biotechnology in preservation of bio-diversity; In situ and ex situ conservation through gene banks. Phytoremediation - xenobiotics and bioaccumulation of metals using plants.

Agricultural biotechnology: Production of biofertilizers –Rhizobium, Azolla, Biopesticides-Bt insecticide. Advantages and applications of biofertilizers and biopesticides.

UNIT-V

Bioethics and Biosafety

Bioethics– Ethics of Genetically modified plants, animals and microbes, ethics in genetically modified food, stem cell research.. Potential effect on Environment and Human health by transgenic plants-Risk assessment, regulation and containment - Human genome project - ICMR Ethical Guidelines for Biomedical Research on Human Subjects. Biosaftey guidelines and regulations - Intellectual Property Rights - Plant variety protection.

ELECTIVE III - 17ENVA3EC
ENVIRONMENTAL MANAGEMENT AND SUSTAINABLE DEVELOPMENT

Objectives: To impart an understanding of system approaches, tools of environmental management, management of ecosystem and; local and global environmental **issues**

UNIT - I

Concept and scope of Environmental Management, Environmental Management of Resources -- Water, forest, biological, mineral and agricultural; Environmental management of chemical, mining and manufacturing industries –petroleum, coal, cement, paper, fertilizer. Analysis and prediction of Environmental issues: Environmental Planning, Establishment of Health and Environmental standards, measuring Sustainable Development, Life Cycle Assessment, Material Flow Analysis, Environmental Auditing and Environmental Management Systems and Accounting for Eco-efficiency.

UNI T - II

Principles of Risk Assessment: Human Health Risk Assessments, Ecological Risk Assessment, Probabilistic Risk Assessments, Determination of acceptable risk based limits for Environmental chemicals and development of risk based remediation goals.

UNIT - III

The role of Risk Assessment in Environmental Management decisions: Evaluation of Human Health Risks Associated with airborne exposures to asbestos, a diagnostic human health risk assessment for a contaminated site problem and a risk based strategy for developing a corrective action, Response plan for petroleum – contaminated sites, Risk Management and Risk Communication.

UNIT - IV

Basic concepts of Environmental Economics, International Trade and its Environmental Integrity, Ecolabelling, responsible care, design for the Environment and full-cost accounting for municipal solid waste management, Waste lands and their reclamation, Desertification and its control. Soil erosion, Formation and reclamation of user, alkaline and saline soil, Terra Preta [black carbon] soil in Amazon forests for sustainability in soil; Biochars for energy production and as mitigation measures for global warming and soil rejuvenation.

UNIT - V

Environmental Education and Communication, Environmental Conflict Management, Sustainable development – concept, and growth of the idea, indicators of sustainability, Sustainability of Water Resources, Sustainable Management of Forests, Sustainability in Industry, Ecosystem Management: Coastal Environments, River and Inland Water Environments, Wetlands, Desert margins, Rural and Urban Environments. Current environmental issues in India – Case studies: Narmada Dam, There Dam, Almetti Dam.

SUPPORTIVE PAPER I
ECOTOURISM – 17ENVGS18

Objectives: To teach the students the importance of tourism and ecotourism activities

UNIT - I

Concepts of Tourism - Classification – Religious Tourism – Cultural Tourism – Heritage Tourism – Monumental Tourism – Adventure Tourism – Mass Tourism – Sustainable Tourism – Consumptive and Non-Consumptive Tourism. Principles of Ecotourism – Types of Ecotourism – Concepts of Ecotourism – Origin of Ecotourism – Objectives of Ecotourism – Benefits of Ecotourism – Trends affecting Ecotourism.

UNIT - II

Places of interests of Ecotourism – Ecocircuit of the Western Ghats – Infrastructural Facilities for Ecotourism – Maintenance of Ecological Centers – Important Biosphere Reserves. Target group of Ecotourism – Ecotourism and Conservation – Study of different Ecosystem – Rain forest Ecotourism – Mountain Ecotourism – Polar, Islands and Coasts Ecotourism – Wilderness – Marine Ecosystem- Sanctuaries and National Parks - TQM of Ecotourism Resorts, Knowledge, skills, attitude and commitment of ecotourism service providers.

UNIT - III

Impact of Ecotourism – Economic Impacts (Fiscal Impacts, Concept and Methods) – Types and Degree of Impacts from Ecotourism activities – Socio-cultural Impacts – Ecotourism related organization – Ecotourism Research-Disasters and Ecotourism-Role of ethics in ecotourism - Advantages and Disadvantages of Ecotourism- Eco-branding and Eco-labeling of Ecotourism Products - Marketing of Ecotourism, Ecotourism and Sustainable Development - Management Issues in Ecotourism, Ecotourism-based/related employment: Scope and areas of employment.

SUPPORTIVE II: 17ENVGS53
NATURAL DISASTER MANAGEMENT

UNIT - I

Natural Disasters – Nature and Extent and Educative – Disasters - Cyclone – Tornadoes – Avalanches – Flood –Drought – Volcanic – Earthquakes – Fire – Landslides. Forecasting and Warning System: Cyclone Disaster Education - Cyclone Safety – Earthquake – Avalanche – Safety and Flood Safety – Impact on Environment.

UNIT - II

Disaster Management. Predisaster Planning-Toning of Disaster – prone areas – prioritization – regulations – protection measures during disaster - Post disaster. Relief Camp Organization – Survey and Assessment. Disaster Management Cycle – Vulnerability Analysis – Warning system –Legal Aspects – case studies for disasters and management, Safety Measures – Disaster Management plans.

UNIT - III

Disaster Preparedness and Training. Community Preparedness in Natural Disasters- Roles and responsibilities of different national and international agencies and government - NGO, Armed forces, Paramilitary forces, Community based organizations (CBO) - Army Training for Disaster Reduction –Role of team and co-ordination -Training needs – Target Groups – Local Condition. Mitigation Strategies : Disaster Mitigation –Training for emergency.

SUPPORTIVE III -17ENVGS03
ENVIRONMENTAL EDUCATION AND AWARENESS

UNIT-I

Environmental Education:

Concept, scope and importance of Environmental Education - Objectives of Environmental Education at secondary school level. Values and ethics related to environment - Approaches of Environmental Education - Salient features of environmental awareness through education: programs of environmental education for secondary school children - Programs of environmental education for attitude changes among the children.

UNIT II

Environmental Hazards:

Causes and effects of environmental hazards, effect of human activities on environment - environmental pollution - global and local (Soil pollution, water pollution, air pollution, noise pollution) - Green House effect –Ozone layer depletion –acid rain, pillar melting, rise of sea level and their implications - Mitigation efforts.

UNIT III

Sustainable Development and Environmental Awareness - Learning to live in harmony with nature - environmental education for development, conservation of soil, water, forests, wild life, energy resources, movement to save environment, eco-friendly technology - Alternate sources of energy - Waste management - Population and environment -

SELF STUDY PAPER

CLIMATE CHANGE

UNIT I

Climate change – concept of climate change - Human Impacts on climate- greenhouse gas emissions, sea level rise - Global warming, greenhouse effect, global and regional trends in green house gas emissions - role of oceans and forests as carbon sinks, ozone depletion- stratospheric ozone shield and Ozone hole – Impact of Climate Change on weather and climatic patterns, ice caps, glaciers, agriculture, vegetation, biodiversity, sea level, tourism and their implications.

UNIT II

Climate change - Adaptation and Mitigation strategies - renewable energy, green building, energy efficiency and reducing consumption - low carbon economy - international adaptation initiatives and programs - Integrated mitigation for development and planning through low emission development strategies - Climate Change and sustainable development

UNIT III

International agreements and protocols. The role of UN Collaborative Programme on Reducing Emissions from vehicles - United Nation Framework Convention on climate change (UNFCCC) -Key provisions of the UNFCCC, its structure, and different party groups under the convention - Annex I, Annex II and Non-Annex I countries. The Kyoto protocol and its associated bodies. Overview of Conference of Parties (CoP). Main climate change negotiations evolved over the past years and highlights of some key issues relevant to future climate change regime.

SELF STUDY PAPER

SOCIAL ISSUES AND ENVIRONMENT

UNIT I:

Human Population and the Environment - Population growth, variation among nations.

Population explosion and environmental quality – Family Welfare Programme - Environment and human health - Human Rights to a clean environment - Role of Information Technology in Environment and human health - Case Studies

UNIT II

From Unsustainable to Sustainable development - Urban problems related to energy – existing conventional energy sources – rate of depletion – alternate energy sources and its sustainable use – India's clean energy goals 2012-2022 – significance of energy audit – recent initiatives of renewable energy by Govt. of India. Water scarcity and importance of water - water conservation

- rain water harvesting - watershed management – causes and effects of water crisis – World Water Council & UNDP initiatives.

UNIT III

Consumerism and waste products - e-pollution and their management – plastic and biomedical waste - management – Impacts of plastic and biomedical waste on environment –public awareness – Urbanisation and pollution – challenging issues - vehicular, solid waste, water, noise pollution – Issues involved in enforcement of environmental legislation

PRACTICAL I – 17ENVA13P1
INSTRUMENTAL METHODS OF ANALYSIS
ENVIRONMENTAL POLLUTION

1. Spectrophotometric Methods of Estimation: Fluoride, Nitrate, Phosphate, Chromate [Cr 6+], Hg, Pb, Cd, three pesticides, phenol
2. Flame photometric analysis of Na, K, and Ca
3. Sampling and analysis of SO2, CO2, NOX, HC
4. Determination of
   (i) SPM in ambient air by high volume sampler (ii) water soluble suspended matter
   (iii) Water insoluble suspended matter and (iv) organic suspended matter
5. Study on the effect of selected air pollutants on some plants
6. LC_{50} and LD_{50} determination
7. An air quality survey report of an area
8. Detection and estimation of noise pollution.
9. Water quality analysis: Determinations of DO, BOD, COD, TKN, TDS, TSS, turbidity, conductivity, alkalinity, acidity, nitrate, chloride, total hardness - Instrumental and wet chemical methods of analysis
10. Estimation of sulphate by turbidimetry.
11. Physical, Chemical and Biological properties of soil: Collection, particle size analysis (silt and clay), Soil profile, water holding capacity, density, porosity, pH, conductivity, NPK, TOC

STATISTICS AND RESEARCH METHODS IN ENVIRONMENT MANAGEMENT

1. Collection of Data: Primary data – Secondary data – Classification and Tabulation – Diagrammatic Representation

2. Data Analysis using software: SPSS and Excel stat: Editing, Data Tabulation,

3. Analysis: Descriptive statistics – Correlation – Regression – Factor analysis – Cluster analysis – Principal Component Analysis (PCA), Graph Plotting - One way ANOVA – Two way ANOVA

4. Environmental chemicals related databases and uses.

PRACTICAL II – 17ENVA23P1
WASTE MANAGEMENT AND BIOREMEDIATION

1. Basic Microbiology: Aseptic techniques - Sterilization, Media Preparation and Isolation of pure culture
2. Growth curve, measure of bacterial population by turbidometry and studying the effect of temperature and pH.

3. Metal resistant Bacteria and effect of heavy metals on microbial growth
4. Enzyme production using agrowaste (Protease / cellulase / lipase)
5. Effect of different pH and temperature on enzymes (Protease / cellulase / lipase) production
5. Production of biogas from different organic waste materials
6. Mushroom Cultivation
7. Study of the impact of the chosen waste materials on seed germination and radical elongation
8. Exercises on estimation, composition and segregation of solid waste
9. SCP production using waste water

BIODIVERSITY AND CONSERVATION

Biodiversity assessment

1. Plankton community study: Phytoplankton and Zooplankton: Species identification - Diversity – density – abundance – distribution– Primary productivity

2. Aquatic insect community study: Species identification - Diversity – density – abundance – distribution

3. Fish community study: Species identification - Diversity – density – abundance – distribution

4. Amphibians community study: Species identification - Diversity – density – abundance – distribution

5. Reptiles community study: Species identification - Diversity – density – abundance – distribution

6. Bird community study: Species identification - Diversity – density – abundance – distribution

7. Mammals community study: Species identification - Diversity – density – abundance – distribution

8. Vegetation studies: Line, quadrates and belt transect methods– Species identification - Diversity – density – abundance – distribution

9. Grassland community study: Species identification - Diversity – density – abundance – distribution

10. Taxonomic identification of plants and animals using morphological and molecular techniques.

GREEN PRODUCTS

1 Flower waste / Leaf waste / Paper waste into manure by windrow composting method
1. Kitchen waste / Leaf waste into manure by composting method
2. Flower waste / Paper waste / Kitchen waste into manure by vermi-composting method
3. Production of Rhizobium as biofertilizer

PRACTICAL III – 17ENVA33P1

REMOTE SENSING & GEOGRAPHICAL INFORMATION SYSTEM REMOTE SENSING

1. Importing Aerial/ Satellite image in ERDAS
2. Georeferencing and Image/Map Projection in ERDAS
3. Supervised and Unsupervised classification

GEOGRAPHICAL INFORMATION SYSTEM I. Visual Interpretation

1. Map reading (survey of India Topo sheet)
2. Marginal Information and Extra Marginal Information
3. Relief and Cultural Features

II. Digital Interpretation

1. Importing Aerial/Satellite Imagery and Scanned Raster Image
2. Georeferencing and Co-Ordinate System
3. Map Projection (Type of Map Projection)
4. Digitization and Editing
5. Topology Creation
6. Proximity Analysis (Buffer, Distance Measures)
7. Interpolation Analysis (Kriging, Idw Etc)
8. Density Analysis (Point, Line Etc.)
9. Surface analysis: Tin Creation – Aspect – Slope - Hill Shade - View Shed - Cut and Till

ENVIRONMENTAL ENGINEERING

1. Jar test Experiments –Optimization of coagulant, pH and dose
2. Determination of residual chlorine
3. Determination of total dissolved solids / suspended solids
4. Determination of volatile suspended solids
5. Biotreatment of textile / dairy / paper industrial effluent
6. Calculation and designing of Sedimentation / Aeration tank
7. Calculation and designing of Activated Sludge Processes
8. Calculation and designing of Trickling Filter
9. Calculation and designing of Disinfection Process
10. Calculation and Designing of Sanitary Landfills
11. Calculation and Designing of Cyclones / Settling chamber / Electrostatic precipitator

QUESTION PAPER PATTERN

CORE & ELECTIVE PAPERS

PART A

Time : 3.00 Hrs. **Marks: 75**

Answer all questions **(10 x 1 =10)**

Ten Multiple choice questions each carrying one mark

1.
2.
3.
4.
5.
6.
7.
8.
9.
10.

PART B

Answer any FIVE **(5 x 2 = 10)**

Seven questions out of which FIVE have to be answered

11.
12.
13.
14.
15.
16.
17.

PART C

Answer all Questions **(5 x 5 = 25)**

Five questions with Internal Choice

18. a or b
19. a or b
20. a or b
21. a or b
22. a or b

PART D

Answer any THREE **(3 x 10 = 30)**

Five questions out of which THREE have to be answered

23.
24.
25.
26.
27.

(Unit wise distribution of questions should be followed)

QUESTION PAPER PATTERN

SUPPORTIVE AND SELF STUDY PAPERS

PART A

Answer all questions **(6 x 1 =6)**

Six Multiple choice questions each carrying one mark

1.
2.
3.
4.
5.
6.

PART B

Answer any THREE **(3 x 2 = 6)**

Five questions out of which THREE have to be answered

7.
8.
9.
10
11.

PART C

Answer all Questions **(2 x 5 = 10)**

TWO questions with Internal Choice

12. a or b
13. a or b

PART D

Answer any TWO **(2 x 8 = 16)**

Three questions out of which TWO have to be answered

14.
15.
16.

(Unit wise distribution of questions should be followed)

_____
