

BHARATHIAR UNIVERSITY, COIMBATORE - 641 046

BRANCH II - STATISTICS

**M.Sc., Statistics / M.Sc. Statistics (with Computer Applications)
(Choice Based Credit System)**

(For the candidates admitted during the academic year 2019 – 2020 and onwards)

Objective of the Course

The course aims to instill and inspire the domain knowledge on theoretical and applied aspects of Statistics in a broader spectrum. It intends to impart awareness on the importance of the conceptual framework of statistics across diversified fields and to afford practical training on the applications of statistical methods for carrying out analysis of data using sophisticated statistical software like SAS, SYSTAT, SPSS, etc., and using the programming knowledge in R and C++. The course curriculum has been designed in such a way to cater the needs of the stakeholders to get placements in industries and institutions on successful completion of the course and to provide them ample skill and opportunities to meet the challenges at the national level competitive examinations like CSIR NET in Mathematical Sciences, SET, Indian Statistical Service (ISS) of UPSC, etc.

Eligibility Criteria for Admission

A candidate who has acquired a degree in B.Sc., Statistics or B.Sc., Mathematics with Statistics as an allied / ancillary subject or as one of the subjects or B. Sc., in Mathematics with Computer Applications having Statistics as one of subjects shall be permitted to join M. Sc., STATISTICS course.

A candidate who has acquired a degree in B.Sc., Statistics or B.Sc., Mathematics with Statistics as an allied / ancillary subject or as one of the subjects or B. Sc., Mathematics with Computer Applications having Statistics as one of subjects or B.Sc., in Computer Science with Statistics as one of the subjects or B.C.A., with Statistics as one of the subjects shall be permitted to join M. Sc., STATISTICS with (Computer Applications) course

Duration of the Course

The duration of the M. Sc., STATISTICS / M. Sc., STATISTICS with Computer Applications course is two years which comprise of four semesters. A candidate who has been admitted to the course shall appear all the four semester examinations during the course of study. On successful completion of all the examinations, he / she shall qualify himself/herself for the award of the degree in M.Sc., STATISTICS or M. Sc., STATISTICS (with Computer Applications).

Pattern of Choice Based Credit System

The course of study shall be based on the pattern of Choice Based Credit System (CBCS) with continuous internal assessment and comprehensive external assessment. The comprehensive external assessment shall be done at the end semester University examination. The odd semester shall begin in July and the even semester shall begin in December. Each candidate shall earn a minimum of 92 credits which include the mandatory online SWAYAM/MOOC course of 2 credits during the period of study. The break-up of total credits for the programme shall be as given under:

Core Papers – Theory	13 x 4 Credits = 52 Credits
Core Papers – Practical	04 x 4 Credits = 16 Credits
Elective Papers	03 x 4 Credits = 12 Credits
Core: Project/Dissertation	01 x 4 Credits = 04 Credits
Supportive Papers	02 x 3 Credits = 06 Credits
SWAYAM/MOOC Online Course	01 x 2 Credits = 02 Credits

Components for Internal Assessment

Tests, assignments, seminars and attendance shall be the components for continuous internal assessment. A maximum of 25 marks shall be allotted under continuous internal assessment in each theory paper offered by the Department. The distribution of marks is as given under:

Marks for Tests	: 15
Marks for Assignments/Seminar	: 05 (Average of assignment and seminar marks)
Attendance	: 05

Distribution of Marks for Attendance

90% and above	: 5 Marks
Between 85% and 90%	: 4 Marks
Between 80% and 85%	: 3 Marks
Between 75% and 80%	: 2 Marks
Between 70% and 75%	: 1 Mark

Distribution of Continuous Internal Assessment Marks for Core - Practical Paper

Record Work	: 25 Marks
Test	: 10 Marks
Attendance	: 05 Marks

Award of Degree

A candidate who secures a minimum of 50% of marks in the end semester University examination and also a minimum of 50% of marks in aggregate comprising both continuous internal assessment and end semester University examination in each paper shall be declared to have passed the course for the award of the degree in M.Sc., Statistics or M.Sc., Statistics (with Computer Applications).

A candidate who secures a minimum of 7.5 out of 10 CGPA (Cumulative Grade Point Average) and above in aggregate comprising both continuous internal assessment and end semester University examination shall be declared to have passed the examination in FIRST CLASS WITH DISTINCTION, if the candidate has passed all the examination prescribed for the course in the first appearance.

A candidate who secures a minimum of 6.0 out of 10 CGPA and above comprising both continuous internal assessment and end semester University examination in aggregate shall be declared to have passed the examination in FIRST CLASS.

A candidate who clears all the papers prescribed for the course in the FIRST APPEARANCE shall be eligible for Ranking/Distinction.

Pattern of Question Paper – (for core – practical subjects)

The question paper for each of the core - practical papers (Statistics Practical I and II, Programming Lab I and II, Statistical Software Practical using SPSS and MINITAB, and Statistical Software Practical using R shall consist of four questions with internal choice. The maximum marks for each of the practical papers shall be 60. A candidate shall attend all the four questions, each of which shall carry 15 marks. The composition of the question paper shall be as given below:

Time: Three Hours

Max. Marks: 60

Answer all the questions
Each question carries *fifteen* marks

Q. No. 1 – Q. No. 4 - Questions with internal choices (either (a) or (b) type)

Pattern of Question Paper – (for core - theory and elective subjects)

The question paper for each of the core and elective papers shall consist of three sections. While Section A shall contain 10 objective type questions, Section B and Section C shall contain questions of descriptive nature. Internal choice (either / or type) shall be given in Section B and Section C. In Section A, there shall be two questions each with four multiple choices from each of the five units. In Sections B and C, there shall be one question with internal choice (either/or type) from each of the five units. The composition of the question paper shall be as given below:

Time: Three Hours

Max. Marks: 75

Section A – (10 x 1 = 10)

Answer *All* the questions

Each question carries *one* mark

Q. No.1. – Q. No. 10 - Objective questions with four multiple choices

Section B – (5 x 5 = 25)

Answer all the questions

Each question carries *five* marks

Q. No. 11 – Q. No. 15 - Questions with internal choices (either (a) or (b) type)

Section C – (5 x 8 = 40)

Answer all the questions

Each question carries *eight* marks

Q. No. 15 – Q. No. 20 - Questions with internal choices (either (a) or (b) type)

Pattern of Question Paper – (for supportive subject)

The question paper for each of the supportive papers shall consist of three sections. While Section A shall contain 5 objective type questions, Section B and Section C shall contain questions of descriptive nature. Internal choice (either / or type) shall be given in Section B and Section C. In Section A, there shall be one question each with four multiple choices from each of the five units. In Sections B, there shall be one question with internal choice (either/or type) from each of the five units and in Section C, there shall be three questions with internal choice (either/or type from all the five units. The composition of the question paper shall be as given below:

Time: Two Hours

Max. Marks: 38

Section A – (5 x 1 = 5)

Answer *All* the questions

Each question carries *one* mark

Q. No.1. – Q. No. 5 - Objective questions with four multiple choices

Section B – (5 x 3 = 15)

Answer all the questions

Each question carries *three* marks

Q. No. 6 – Q. No. 10 - Questions with internal choices (either (a) or (b) type)

Section C – (3 x 6 = 18)

Answer all the questions

Each question carries *six* marks

Q. No. 11 – Q. No. 13 - Questions with internal choices (either (a) or (b) type)

BHARATHIAR UNIVERSITY, COIMBATORE 641 046

BRANCH II - STATISTICS

**Course Title: M.Sc. (Statistics) | Course Code: 17STAA
(For the candidates admitted during 2019-2020 and onwards)**

List of Core/Elective/Supportive Subjects to be offered

CORE Subjects

1. Real Analysis and Linear Algebra
2. Measure and Probability Theory
3. Distribution Theory
4. Sampling Theory and Methods
5. Statistical Estimation Theory
6. Multivariate Statistical Analysis
7. Statistical Quality Control and Reliability
8. Operations Research
9. Statistics Practical I
10. Testing Statistical Hypotheses
11. Linear Models and Design of Experiments
12. Programming in R
13. Statistical Software Practical using SPSS and MINITAB
14. Stochastic Processes
15. Biostatistics and Survival Analysis
16. Statistics Practical II
17. Statistical Software Practical using R
18. Project & VIVA-VOCE

ELECTIVE Subjects (for students of M.Sc., Statistics with Computer Applications)

1. Official Statistics
2. Demography and Vital Statistics
3. Econometrics
4. Data Mining
5. Applied Regression Analysis

ELECTIVE Subjects (for students of other departments)

1. Bio-Statistics
2. Probability and Statistics
3. Statistics for Management
4. Operations Research Methods
5. Actuarial Statistics

SUPPORTIVE Subjects (for students of other departments)

1. Descriptive Statistics
2. Data Analysis
3. Statistical Methods for Industries
4. Statistical Methods for Researchers
5. Statistical Methods for Biologists
6. Elements of Operations Research

BHARATHIAR UNIVERSITY, COIMBATORE - 641 046

BRANCH II - STATISTICS

Course Title: M.Sc. (Statistics) | Course Code: 17STAA

(For the candidates admitted during 2019-2020 and onwards)

Course Structure and Scheme of Examinations

Semester I						
Subject	Code	Title of the Papers	Credits	Internal Marks	External Marks	Total Marks
Core	17S13A	Real Analysis and Linear Algebra	4	25	75	100
Core	17S13B	Measure and Probability Theory	4	25	75	100
Core	17S13C	Distribution Theory	4	25	75	100
Core	17S13D	Sampling Theory and Methods	4	25	75	100
Elective	17S13EA	Elective I	4	25	75	100
Supportive	Supportive	Offered by other Departments	2	12	38	50
Total			22			550
Semester II						
Subject	Code	Title of the Papers	Credits	Internal Marks	External Marks	Total Marks
Core	17S23A	Statistical Estimation Theory	4	25	75	100
Core	17S23B	Multivariate Analysis	4	25	75	100
Core	17S23C	Statistical Quality Control and Reliability	4	25	75	100
Core	17S23D	Operations Research	4	25	75	100
Practical	17S23P1	Statistics Practical I	4	40	60	100
Supportive	Supportive	Offered by other Departments	2	12	38	50
Total			22			550
Semester III						
Subject	Code	Title of the Papers	Credits	Internal Marks	External Marks	Total Marks
Core	17S33A	Testing Statistical Hypotheses	4	25	75	100
Core	17S33B	Linear Models and Design of Experiments	4	25	75	100
Core	17S33C	Programming in R	4	25	75	100
Elective	17S33EB	Elective II	4	25	75	100
Practical	17S33P2	Statistical Software Practical using SPSS and MINITAB	4	25	75	100

Project	17S43PV	Project and Viva-voce*	4	25	75	100
		SWAYAM – MOOC – Online Course*	2			50
Total			26			650

*SWAYAM – MOOC – online course shall be of duration at least 4 weeks with at least 2 credits. The course shall be mandatory and shall be completed within third semester (i.e., before the beginning of fourth semester).

Distribution of Marks and Credits

Subjects	Marks	Credits
Core	1800	72
Elective	300	12
Supportive	150	06
SWAYAM/MOOC Course	50	02
Total	2300	92

17S13A	Real Analysis and Linear Algebra	Core 1
--------	----------------------------------	--------

Unit I

Real valued functions: Limits, continuity and uniform continuity of functions – Algebra of continuous functions - Differentiability – Algebra of Derivatives - Maxima and Minima of functions – Mean value theorems - Taylor’s theorem – Functions of several variables.

Unit II

Sequences and Infinite Series: Boundedness and limit of a sequence - Convergence of sequences and series of real numbers – absolute and conditional convergence – Point - wise and uniform convergence – Tests for absolute, conditional and uniform convergence – Properties of uniform convergence.

Unit III

Rieman-Stieljtes (R-S) intergral. Upper and lower R-S integrals. Necessary and sufficient condition for R-S integrability. Algebra of R-S integrable functions. Class of R-S integrable functions. Integration by parts. First mean value theorem and Cauchy’s mean value theorem for R-S integrals.

Unit IV

Characteristic roots and characteristic vectors. Cayley-Hamilton theorem. Minimum polynomial, similar matrices, algebraic and geometric multiplicities of a characteristic root. Spectral decomposition of a real symmetric matrix.

Unit V

Quadratic forms. Congruent transformations, congruence of symmetric matrices. Canonical reduction and orthogonal reduction of real quadratic forms. Nature of quadratic forms. Sylvester’s law of inertia. Simultaneous reduction of a pair of quadratic forms.

Books for Study

1. Ajit Kumar and Kumaresan, S. (2014). A Basic Course in Real Analysis, Chapman and Hall/CRC Press.
2. Arora, S. (1988). Real Analysis, Satya Prakashan Mandir, New Delhi.
3. Goldberg, R. R. (1976). Methods of Real Analysis, Oxford & IBH Publishing Company, New Delhi.
4. Hoffman, K., and Kunze, R. (1975). Linear Algebra, Second Edition, Prentice Hall of India, New Delhi.
5. Kumaresan, S. (2000). Linear Algebra: A Geometric Approach, PHI Learning.
6. Malik, S.C., and Arora, S. (2009). Mathematical Analysis, Second Edition, New Age International, New Delhi.
7. Rao, .A. R., and Bhimasankaram, P. (2000). Linear Algebra, Second Edition, Hindustan Book Agency, Hyderabad.
8. Vasishta, A. R. (2005). Matrices. Krishna Prakashan Mandir, New Delhi.

Books for Reference

1. Apostol, T. M. (1986). Mathematical Analysis, Second Edition, Addison-Wesley, New York (Twentieth Reprint, 2002).
2. Graybill, F.A. (1983). Matrices and Applications in Statistics, Wadsworth Publishing Company, Belmont, California, USA.
3. Hohn, F.E. (1971). Elementary Matrix Algebra, Amerind Publishing Co. Pvt. Ltd., New Delhi.
4. Rudin, W. (1985). Principles of Mathematical Analysis, McGraw-Hill, New York.
5. Searle, S.R. (1982). Matrix Algebra Useful for Statistics, John Wiley, New York.

17S13B	Measure and Probability Theory	Core 2
---------------	---------------------------------------	---------------

Unit I

Sets: Finite and infinite sets, Limit superior, limit inferior and limit of a sequence of sets. Field sigma field and Borel field – Functions and inverse functions – Set functions – Measure: Measure space, Measurable functions, Combinations of measurable functions, Sequences of measurable functions, Pointwise convergence, Convergence in measure.

Unit II

Integration: Integrable simple functions, Sequences of integrable simple functions, Integrable functions, Sequences of integrable functions, Properties of integrals – Signed Measures – Absolute Continuity – Radon – Nikodym theorem (Statement only) – Product measures – Fubini's theorem (Statement only).

Unit III

Random variables – Limits of random variables – Probability, probability space, induced probability space and discrete probability space – Properties. Distribution functions. Expectation and Conditional Expectation – Properties – Inequalities: Jensen's, Holder's, Minkowski's, Cauchy–Schwartz's inequalities - Basic Inequality – Chebychev's and Markov's inequalities.

Unit IV

Convergence of random variables: Convergence in probability, convergence almost surely, convergence in distribution, Convergence in r th mean, monotone convergence theorem – Definition and properties of characteristic functions – Inversion formula – Problems - Borel 0 - 1 law- Borel Cantelli lemma – Uniqueness theorem – Helly-Bray lemma.

Unit V

Law of Large Numbers : Weak and Strong Law of Large Numbers – Bernoulli's Weak Law of Large Numbers - Kolmogorov's Strong law of large numbers – Central limit theorem – Lindeberg – Levy's central limit theorem - Liapounov's central limit theorem - Lindberg – Feller's central limit theorem (Statement only)

Books for Study

1. Basu, A. K. (2012). Measure Theory and Probability, Prentice Hall India Learning Private Limited, New Delhi.
2. Bhat, B. R. (2009). Modern Probability Theory – An Introductory Text Book, Third Edition (Reprint), New Age International Private Ltd., New Delhi.

7. Rohatgi, V. K., and Saleh, A.K.M.E. (2015), An Introduction to Probability and Statistics, Third Edition, John Wiley & Sons, NY.

Books for Reference

1. Feller, W. (2008). Introduction to Probability Theory and its Applications, Vol. I, Third Edition, Wiley, NY. .
2. Rao, C. R. (2001). Linear Statistical Inference and Its Applications, Second Edition, Wiley – Interscience, NY.
3. Halmos, P. R. (1978). Measure Theory, (First Edition in 1950), Second Printing, Springer-Verlag, NY.

17S13C	Distribution Theory	Core 3
---------------	----------------------------	---------------

Unit I

Probability distributions: Cauchy distribution – Laplace distribution - Pareto distribution – Lognormal distribution – Power series distribution – Logarithmic series distribution – Distribution of functions of random variables

Unit II

Bivariate binomial, Bivariate Poisson and Bivariate normal distributions - Concept of truncated distribution – compound distribution – mixture distribution and their properties.

Unit III

Non-central t, chi-square and F distributions and their properties.

Unit IV

Order Statistics: Distribution of order statistics - Joint distribution of order statistics – Asymptotic distribution of rth order statistics - Joint distribution of range and mid range.

Unit V

Distribution of Quadratic forms – Properties – Cochran’s Theorem – Empirical Distributions – Properties.

Books for Study

1. Rohatgi V. K. (1976). Introduction to Probability Theory and Mathematical Statistics, John Wiley & Sons, NY.
2. Johnson, N. L., Kemp, A.W., and Kotz, S. (2005). Univariate Discrete Distributions, Third Edition, John Wiley and Sons, New York.
3. Johnson, N. L., Kotz, S., and Balakrishnan, N. (2004). Continuous Univariate Distributions. Vol. I, John Wiley and Sons (Asia), Singapore.
4. Johnson, N. L., Kotz, S., and Balakrishnan, N. (2014). Continuous Univariate Distributions, Vol. II. John Wiley and Sons (Asia), Singapore.

Books for Reference

1. Hogg, R.V., McKean, J. W., and Craig, A. T. (2012). Introduction to Mathematical Statistics, Seventh Edition, Pearson Education, London.
2. Johnson, N. L., and Kotz, S. (1972). Distributions in Statistics, Princeton University Press, Princeton.

17S13D	Sampling Theory and Methods	Core 4
--------	-----------------------------	--------

Unit I

Population and Sample – Census and sample survey – sampling – sampling unit, sampling frame, sampling distribution, standard error, questionnaire and schedule, sampling design – sampling and non-sampling errors – non-response and its effects – sample surveys – principles of sample survey - principal steps in sample survey - limitations of sampling.

Unit II

Simple Random Sampling (with and without replacement): Notations and terminology - Estimates of population total, mean and their variances and standard errors – Pooling of estimates - Determination of sample size. Simple random sampling for attributes -

Unit III

Stratified random sampling: Estimates of population total, mean and their variances - Related properties – Allocation of sample sizes – Neyman’s proportional and optimum allocations - Comparison of stratified sampling with simple random sampling - Estimation of proportion under stratified random sampling.

Unit IV

Systematic sampling: Estimates of population total, mean, and their variances and standard errors – systematic sampling with linear trend – comparison of systematic sampling with stratified and simple random sampling – circular systematic sampling - Two stage sampling with equal number of second stage units and cluster sampling.

Unit V

Varying Probability Sampling: Probability proportional to size (PPS) sampling (with and without replacement) – Stratified PPS – Selection procedures – Ordered and unordered estimates – Desraj, Horwitz – Thompson and Murthy’s estimates. Ratio Estimates – Methods of estimation, approximate variance of the Ratio Estimate - Regression Estimators – Difference Estimators, Regression Estimators in Stratified Sampling..

Books for Study

1. Cochran, W.G. (1977). Sampling Techniques, Third Edition, John Wiley & Sons, NY.
2. Singh D., and Chowdhary, F. S. (2018). Theory and Analysis of Sample Survey Design, New Age International Private Ltd., New Delhi.
3. Des Raj (1978), Sampling Theory, Tata-McGraw Hill, New Delhi.

Books for Reference

1. Sukhatme, P. V., and Sukhatme, B. V. (1970). Sampling Theory of Surveys with Applications, Asia Publishing House, New Delhi.
2. Sampath, S. (2000). Sampling Theory and Methods, Narosa Publishing Company, New Delhi.
3. Murthy, M. N. (1967). Sampling Theory and Methods, Statistical Publishing Society, Calcutta.

17S23A	Statistical Estimation Theory	Core 5
---------------	--------------------------------------	---------------

Unit I

Estimation and point estimation - Sufficiency – Factorization Theorem – Minimal sufficiency, likelihood equivalence – Completeness – Uniformly minimum variance unbiased estimator – Rao - Blackwell and Lehmann - Scheffe theorems.

Unit II

Mean-squared error, Fisher's information measure. Cramer-Rao inequality, Bhattacharya inequality, Chapman-Robbins inequality - Fisher's information matrix-simultaneous of parameters in normal(univariate and bivariate) distribution.

Unit III

Methods of point estimation-maximum likelihood method (asymptotic properties of ML estimators are not included), method of moments, method of minimum chi-square and modified minimum chi-square.

Unit IV

Consistency and CAN estimators. Asymptotic properties of maximum likelihood estimators. Example of consistent but not asymptotic normal estimators from Pitman family. Fisher's lower bound for asymptotic variance. Asymptotic relative efficiency. Method of least squares.

Unit V

Interval estimation: Confidence level and confidence coefficient. Duality between acceptance region of a test and a confidence interval. Pivotal quantity method. Shortest length confidence intervals.

Construction of confidence intervals for population proportion (small and large samples) and between two population proportions (large samples) - Confidence intervals for mean, variance of a normal population, difference between mean and ratio of two normal populations.

Books for Study

1. Goon, A. M., Gupta, M. K., and Dasgupta, B. (1989). An Outline of Statistical Theory- Vol.II, World Press, Calcutta. .
2. Kale, B. K. (1999). A First Course on Parametric Inference, Narosa Publishing House, New Delhi.
3. Rohatgi, V. K. (1976). Introduction to Probability Theory and Mathematical Statistics, John Wiley & Sons, NY.

Books for Reference

1. Dudewicz, E. J., and Mishra, S. N. (1988). Modern Mathematical Statistics, John Wiley & Sons, NY.
2. Lehman, E. L., and Cassella, G. (1998). Theory of Point Estimation, Second Edition, Springer, NY.

17S23B	Multivariate Analysis	Core 6
--------	-----------------------	--------

Unit I

Multivariate Normal Distributions - Marginal and Conditional Distributions - Characteristic Function and Moments - Distribution of Linear Combinations of Multivariate Normal Vector - Determination of Mean and Covariance Matrix of Multivariate Normal Distribution.

Unit II

Maximum likelihood estimators of the parameters of multivariate normal distribution - Distribution of sample mean vector - Necessary and sufficient conditions for a quadratic form to be distributed as a chi - square distribution - Inference concerning the sample mean vector when covariance matrix is known.

Unit III

Wishart Distribution – Characteristic function and properties. Hotelling's T^2 Distribution – Properties and Applications - Two sample problems with unequal covariance matrices - Likelihood Ratio Criterion - Mahalanobis D^2 Distribution - Relationship between T^2 and D^2 statistics – Behrens-Fisher problem.

Unit IV

Discriminant Analysis: Objectives and assumptions - Fisher's Discriminant Function - Problem of Classification with Two or More Populations - Cluster Analysis: Objectives, Assumptions, Research design. – Formation of clusters – Clustering algorithm.

Unit V

Principal components: Objectives – Extraction of principal components - Factor analysis: Objectives – Estimation of factor loadings - Canonical variables and canonical correlations: Determination of canonical correlation coefficients. Concepts of multidimensional scaling and correspondence analysis.

Books for Study

1. Anderson, T.W. (2003). An Introduction to Multivariate Statistical Analysis, Third Edition, Wiley – Interscience, NY.
2. Johnson, R. A., and Wichern, D. W. (2013). Applied Multivariate Statistical Analysis Sixth Edition, Pearson New International Edition.
3. Jambu, M., and Lebeaux, M.-O. (1983). Cluster Analysis and Data Analysis, North-Holland, NY.

Books for Reference

1. Kshirsagar, A. M. (1972), Multivariate Analysis, Marcel Decker, Inc., NY.
2. Morrison, D. F. (2004). Multivariate Statistical Methods, Fourth Edition, Duxbury Press, CA,
3. Afifi, A. A., and Azen, S. P. (1979): Statistical Analysis - A Computer Oriented Approach, Second Edition, Academic Press, NY.
4. Giri, N. C., (1977). Multivariate Statistical Inference, Academic Press, NY..
5. Rencher, A. C., (2002), Methods of Multivariate Analysis, Second Edition, John Wiley & Sons, NY.

17S23C	Statistical Quality Control and Reliability	Core 7
--------	---	--------

Unit I

Meaning and scope of statistical quality control - Causes of quality variation - Control charts for variables and attributes - Rational subgroups - Construction and operation of \bar{x} , σ , R, np, p, c and u charts - Operating characteristic curves of control charts. Process capability analysis using histogram, probability plotting and control chart - Process capability ratios and their interpretations.

Unit II

Specification limits and tolerance limits - Modified control charts - Basic principles and design of cumulative-sum control charts – Concept of V-mask procedure – Tabular CUSUM charts. Construction of Moving range, moving-average and geometric moving-average control charts..

Unit III

Acceptance sampling: Sampling inspection by attributes – single, double and multiple sampling plans – Rectifying Inspection. Measures of performance: OC, ASN, ATI and AOQ functions. Concepts of AQL, LTPD and IQL. Dodge – Romig and MIL-STD-105D tables. Sampling inspection by variables - known and unknown sigma variables sampling plan - Merits and limitations of variables sampling plan - Derivation of OC curve – determination of plan parameters.

Unit IV

Continuous sampling plans by attributes - CSP-1 and its modifications - concept of AOQL in CSPs - Multi-level continuous sampling plans - Operation of multi-level CSP of Lieberman and Solomon – Wald - Wolfowitz continuous sampling plans. Sequential Sampling Plans by attributes – Decision Lines - OC and ASN functions.

Unit V

Concept of reliability, components and systems, coherent systems, reliability of coherent systems - Reliability function, hazard function, hazard rate, failure rates - IFR and DFR distributions - Common life distributions: exponential, Weibull, gamma distributions - Estimation of parameters. - Reliability of a system with independent components. Series, parallel and mixed systems with several components.

Books for Study

1. Duncan, A. J. (2003.). Quality Control and Industrial Statistics, Irwin-Illinois, US.
2. Grant, E. L., and Leavenworth, R. S. (2000). Statistical Quality Control, Seventh Edition, Tata McGraw Hill, New Delhi.
3. Montgomery, D. C. (2009). Introduction to Statistical Quality Control, Sixth Edition, Wiley India, New Delhi.
4. Ross, S. M. (2009). Introduction to Probability Models, Tenth Edition, Academic Press, MA, US.
5. Zacks, S.(1992). Introduction to Reliability Analysis: Probability Models and Statistical Methods, Springer, New York.

Books for Reference

1. Barlow, E.B., and Proschan, F. (1981). Statistical theory of Reliability and Life Testing: Probability Models, Second Edition, Published by Holt, Rinehart & Winston, Inc.
2. Bowker, A.H., and Lieberman, G.J. (1982). Engineering Statistics, Second Edition, Prentice Hall, New Delhi,
3. Juran, J.M., and De Feo, J.A. (2010). Juran's Quality control Handbook – The Complete Guide to Performance Excellence, Sixth Edition, Tata McGraw-Hill, New Delhi.
4. Schilling, E. G., and Nuebauer, D.V. (2009). Acceptance Sampling in Quality Control Second Edition, CRC Press, New York.
5. Wetherill, G.B. (1977). Sampling Inspection and Quality Control, Second Edition, Chapman and Hall, London.

17S23D	Operations Research	Core 8
--------	---------------------	--------

Unit I

Review of linear programming problems – Simplex algorithm – Use of artificial variables - Two-phase method and Big-M method - Degeneracy in LPP. Duality – Interpretation of duality - Dual Simplex Method.

Unit II

Integer programming problem (IPP) – Pure and mixed integer programming problems - Gomory's constraints and cutting plane algorithm - Mixed IPP – Branch and Bound technique. Dynamic programming problem (DPP) - Principle of optimality – Recursive equation approach Characteristics of DPP.

Unit III

Non-Linear Programming (NLPP): Formulation of NLPP - Constrained optimization problems – Graphical solution - Kuhn-Tucker conditions. Quadratic Programming: Wolf's and Beale's methods.

Unit IV

Inventory control: Analytic structure of Inventory Problems, Concept of economic order quantity, its sensitivity analysis and extensions allowing quantity discounts and shortages, Deterministic and probabilistic inventory models - Models with random demand, and static risk models - Multi-item deterministic inventory problems.

Unit V

Queueing theory: Queueing systems, queueing models, classification of models - M/M/1, M/M/C and M/C/1 queues and their steady state solutions, Waiting Time Distributions for M/M/1 and M/M/C Models. Network scheduling by PERT/CPM, PERT: Basic components, determination of flows and critical path.

Books for Study

1. Hillier, F. S. and Lieberman, G. J. (1990). Introduction to Operations Research, Fifth Edition, McGraw-Hill, NY.
2. Kanti Swarup, Gupta, P. K., and Man Mohan. (2017). Operations Research, Nineteenth Edition, Sultan Chand & Sons, New Delhi.
3. Taha, H. A. (1982). Operations Research: An Introduction, Third Edition, McMillan Publishing Co., Inc., London.
4. Sharma, S. D. (2017). Operations Research: Theory, Methods and Applications, Kedar Nath, Ram Nath and Co, Meerut.

Books for Reference

1. Saaty, T. L. (1961). Elements of Queueing Theory, McGraw-Hill Co., NY.
2. Wagner, H. M. (1980). Principles of Operations Research with Application to Managerial Decisions, Second Edition, Prentice Hall India Learning Private Limited, New Delhi.

17S2P1	Statistics Practical I	Core 9
--------	------------------------	--------

The maximum marks for continuous internal assessment and end semester University examination for Statistics Practical I shall be fixed as 40 and 60, respectively. The continuous internal assessment shall involve test and record work. The question paper at the end semester examination shall consist of four questions with internal choice. A candidate shall attend all the four questions, each of which shall carry 15 marks. The examination shall be conducted at the end of Semester II. Problems relating to the following topics which are covered in Semester I and Semester II shall form the basis for setting the question paper:

1. Sampling Theory and Methods

Simple Random Sampling – Stratified Random Sampling – Systematic Sampling – Single-stage and Two-stage Cluster Sampling – Ratio and Regression estimates.

2. Multivariate Analysis

Maximum likelihood estimation of population mean vector and covariance matrix - Tests based on Hotelling T^2 and Mahalanobis D^2 Statistics - Principal component analysis – Factor analysis - Classification Analysis - Discriminant Function.

3. Statistical Inference

Point Estimation – Methods of Maximum Likelihood, Moments, Minimum Chi-Square - Interval Estimation for mean, variance, ratio of variances and proportions.

4. Statistical Quality Control and Reliability

Control charts for mean, range, fraction defective, number of defective, number of defects – Single, double and sequential sampling plans – Problems on reliability.

17S33A	Testing Statistical Hypotheses	Core 10
--------	--------------------------------	---------

Unit I

Testing of hypotheses: simple and composite hypotheses, two types of errors, level of significance, randomized and non-randomised tests, power and size of a test. Most powerful test - Neyman-Pearson lemma. Monotone likelihood ratio property - Uniformly most powerful tests. Applications to standard statistical distributions.

Unit II

Generalization of Neyman-Pearson fundamental lemma (statement only). Unbiased tests - Construction of uniformly most powerful unbiased tests for one-parameter and multi-parameter exponential families - Applications to standard statistical distribution - Similar regions. Locally most powerful (LMP) test - LMP unbiased test.

Unit III

Invariance - maximal invariant statistic - invariant test. Likelihood ratio (LR) test - asymptotic distribution of LR test statistic-consistency of LR test - Construction of LR tests for standard statistical distributions. Analysis of variance (one-way). Bartlett's test for homogeneity of variances.

Unit IV

U statistic and its property as an estimator of its expected value. Tests for goodness of fit-Chi-square and Kolmogorov-Smirnov tests. Test for randomness. Wilcoxon's signed-rank test. Kolmogorov-Smirnov two sampler test. Mann-Whitney U test. Kruskal-Wallis test.

Unit V

Introduction to sequential procedures - Stopping times - Wald's equation - SPRT: termination property, approximation to stopping bounds and applications to standards distributions. Statement of Wald's fundamental identity - OC and ASN functions and their plotting

Books for Study

1. Rohatgi, V. K. (1976). Introduction to Probability Theory and Mathematical Statistics, John Wiley & Sons, NY.
2. Lehmann, E. L. (1986). Testing Statistical Hypotheses, Second Edition, John Wiley & Sons, NY.
3. Goon, A. M., Gupta, M. K., Das Gupta. B. (1973). An outline of Statistical Theory, Vol. II, World Press, Calcutta.
4. Rajagopalan, M., and Dhanavanthan, P. (2012). Statistical Inference, PHI Learning Pvt., Ltd., New Delhi.
5. Gupta, S. C., and Kapoor, V. K. (2002), Fundamentals of Mathematical Statistics, Sultan Chand & Sons, New Delhi.

Books for Reference

1. Conover, W. J. (1980). Practical Nonparametric Statistics, Second Edition, John Wiley & Sons, NY.
2. Gibbons, J. D. and Chakrabarthy, S. (2010). Nonparametric Statistical Inference, Fifth Edition, Chapman and Hall/CRC Press, FL.
3. Kale, B. K. (1999). A First Course on Parametric Inference, Narosa Publishing House, New Delhi.
4. Wald, A. (1982) Sequential Analysis .John Wiley & Sons, NY.

17S33B	Linear Models and Design of Experiments	Core 11
---------------	--	----------------

Unit I

Linear Models - Assumptions on Error Components - Fixed/Mixed and Random Component Models – Generalized linear model - Gauss-Markov set up – Estimation – Least square method – MLE method - Gauss-Markov theorem-BLUE - Test for Linear Hypothesis - Principles of Experimentation - Review of Basic Designs and CRD-RBD-LSD.

Unit II

Multiple Comparison and Multiple Range Tests: Need – Tukey’s Test – Fisher’s Least Significance Difference method, Duncan’s multiple range test, Newton-Kauls test - Analysis of Covariance – One-way and two-way - Analysis of Graeco Latin Squares, Cross Over Designs, Split Plot and Strip Plot Designs.

Unit III

Factorial Experiments – Advantages and limitations – main effects and interaction effects - Analysis of 2^n , 3^n , s^n and $n \times p$ Asymmetrical Factorial Experiments – Concept and Principle of total, partial and balanced Confounding in Symmetrical Factorial experiments –Advantages and disadvantages of confounding - Analysis of confounded 2^n and 3^n factorial experiments.

Unit IV

Concept of Fractional Replication in Symmetrical Factorial experiments - 1/2 and 1/4 replicate of 2^n , 1/3 replicate of 3^n experiments - Construction and Analysis – Concept of response surface experiments - First order Response surface designs – steepest ascent method – Second order Response surface designs.

Unit V

Incomplete Block Designs, Incidence matrix and its properties, C- matrix and its significance - Concept of Connectedness and Orthogonality – Balanced Incomplete Block Designs parametric relationships – inter and intra block analyses - Partially Balanced Incomplete Block Design and its analysis - Youden Square Design - Simple and Balanced Lattice Designs.

Books for Study

1. Montgomery, D.C. (2012). Design and Analysis of Experiments, Eighth Edition, John Wiley & Sons, NY.
2. Das, M. N., and Giri, N. C. (2011). Design and Analysis of Experiments, Second Edition, New Age International Private Ltd., New Delhi
3. Graybill, F.A. (1961): An Introduction to Linear Statistical Models, McGraw Hill Co., London.
4. Graybill, F. A. (2000). Theory and Applications of Linear Models, Duxbury Press, First Edition, MA.

Books for Reference

1. Fisher, R.A. (1966). The Design of Experiments, 8th Edition, Oliver and Boyd, London.
2. Federer, W. T. (1967). Experimental Design: Theory and Application, Indian Edition, Oxford and IBH Publishing Co., New Delhi.
3. Kempthorne, O. (1965). The Design and Analysis of Experiments, Wiley Eastern India Limited, New Delhi
4. Cochran, W.G. and Cox, G.M. (1992). Experimental Designs, Second Edition, John Wiley & Sons, New York.
5. Nigam, A. K., Puri, P. D., and Gupta, V. K. (1988). Characterizations and Analysis of Block Designs, John Wiley & Sons, NY.
6. Paneerselvam, R. (2012). Design and Analysis of Experiments, PHI Learning Private Ltd., New Delhi.
7. John, P.W.M. (1971). Statistical Design of Experiments, Macmillan Co., NY.
8. Joshi, D.D. (1987). Linear Estimation and Design of Experiments, First Edition, New Age International (P) Ltd, New Delhi.
9. Searle, S.R. and Gruber, M. H. J. (2016). Linear Models, Second Edition, John Wiley & Sons, Inc., New York.

17S33C	Programming in R	Core 12
--------	-------------------------	----------------

Unit I

Data types in r numeric/character/logical; real/integer/complex strings and the paste command matrices, data frames, lists, setwd, read.table, read.csv, write.matrix, write.csv, creation of new variables, categorization, cut, factor; round, apply, creation of patterned variables - saving output to a file; source; print -saving workspace / history.

Unit II

Graphics in r - the plot command, histogram, bar plot, box plot - points, lines, segments, arrows, paste - inserting mathematical symbols in a plot, pie diagram, customization of plot-setting graphical parameters - text and mtext, the pairs command, colours and palettes, saving to a file; graphical parameters such as mar/mai/mfrow, xlab/ylab/las/xaxp/yaxp/xlim/ylim/cex/axis/tck/srt,main/title/legend/locator, identify.

Unit III

Basic statistics -r help-command help, help.search(), r mailing list - contributed documentation on cran - one and two sample t tests, Bartlett's test for variance, f test for equality of variances, multi sample means, non parametric tests, chi-squared tests - randomness, homogeneity, independence, exact tests and confidence intervals, checking the assumptions, distribution fitting.

Unit IV

Vector matrix operations - matrix operations - addition, subtraction, multiplication, linear equations and eigenvalues, matrix decomposition - lu, qr and svd and inverse, the linear model and qr decomposition, determinant, g inverse, finding a basis, orthonormalization, finding rank, the lm function; fitting a linear model; anova / ancova / regression

Unit V

Linear models - models, the summary function, goodness of fit measures, predicted values and residuals; residual plots, the anova table, creating factors - r functions - random number generation & simulations - r libraries.

Books for Study and Reference

1. Purohit, S. G., Gore, S. D., and Deshmukh, S. R. (2009). Statistics Using R, Narosa Publishing House, New Delhi.
2. Quick, J. M. (2010). Statistical Analysis with R, Packt Publishing Ltd., UK.
3. Everitt, B. S., and Hothorn, T. (2010). A Handbook of Statistical Analyses Using R, Second Edition, Chapman and Hall/CRC Press.

17S3P2	Statistical Software Practical using SPSS and MINITAB	Core 13
---------------	--	----------------

The maximum marks for continuous internal assessment and end semester University examination for Statistical Software Practical I shall be fixed as 40 and 60, respectively. The continuous internal assessment shall involve test and record work. The question paper at the end semester examination shall consist of four questions with internal choice. A candidate shall attend all the four questions, each of which shall carry 15 marks. The examination shall be conducted at the end of Semester II. Problems relating to the following topics which are taught using statistical software namely SPSS and MINITAB shall form the basis for setting the question paper:

1. Classification, diagrams, graphical representation of data and descriptive statistical measures
2. Calculation of probabilities under various distributions and generating random samples from probability distributions
3. Correlation and regression: Simple, partial and multiple correlation coefficients, simple linear and multiple regression, curve fitting, time series and forecasting models
4. Confidence intervals for mean, variance and proportions, tests of significance based on normal, t, chi-square, F and Z statistics
5. Non-parametric tests: Run, sign and median tests, test based on Kruskal – Wallis statistics, Freedman’s test
6. Experimental Design: One way ANOVA-two way ANOVA-factorial designs– Multiple comparison tests
7. Multivariate :Principal component analysis, factor analysis, cluster analysis and discriminant analysis
8. Statistical Quality Control charts – Determination of parameters for constructing basic control charts, such as \bar{X} , R, S, p and c charts.

17S43A	Stochastic Processes	Core 14
---------------	-----------------------------	----------------

Unit I

Introduction to Stochastic Processes - Classification of Stochastic Processes, Markov Processes – Markov Chain - Countable State Markov Chain. Transition Probabilities, Transition Probability Matrix. Chapman - Kolmogorov Equations, Calculation of n - step Transition Probability and its limit.

Unit II

Classification of States, Recurrent and Transient States - Transient Markov Chain, Random Walk and Gambler's Ruin Problem. Continuous Time Markov Process: Poisson Processes, Birth and Death Processes, Kolmogorov's Differential Equations, Applications.

Unit III

Branching Processes – Galton - Watson Branching Process - Properties of Generating Functions – Extinction Probabilities – Distribution of Total Number of Progeny. Concept of Weiner Process.

Unit IV

Renewal Processes – Renewal Process in Discrete and Continuous Time – Renewal Interval – Renewal Function and Renewal Density – Renewal Equation – Renewal theorems: Elementary Renewal Theorem. Probability Generating Function of Renewal Processes.

Unit V

Stationary Processes: Discrete Parameter Stochastic Process – Application to Time Series. Autocovariance and Auto-correlation functions and their properties. Moving Average, Autoregressive, Autoregressive Moving Average, Autoregressive Integrated Moving Average Processes. Basic ideas of residual analysis, diagnostic checking, forecasting.

Books for Study

1. Karlin, S. and Taylor, H.M. (1975): A First Course in Stochastic Processes, Second Edition, Academic Press, Inc., NY
2. Medhi, J. (2017): Stochastic Processes, Fourth Edition, New Age International Private Ltd., New Delhi.
3. Box, G.E.P., Jenkins, G.M. and Reinsel, G.C. (1994) Time Series Analysis; Forecasting and Control. Third Edition, Prentice Hall, Englewood Cliff, NJ.

Books for Reference

1. Granger, C. W. J., and Newbold, P. (1984): Forecasting Econometric Time Series, Second Edition, Academic Press Inc., NY.
2. Anderson, T.W., (1971): The Statistical Analysis of Time Series, John Wiley & Sons, NY. (Latest Edition: 1994: Wiley Interscience)
3. Adke, S. R., and Manjunath, S. A. (1984): An Introduction to Finite Markov Processes, Wiley Eastern, New Delhi.
4. Parzen, E. (1962): Stochastic Processes, Holden-Day, Oakland, CA. (Latest Edition: 2015: Dover Books on Mathematics, Dover Publications).

17S43B	Biostatistics and Survival Analysis	Core 15
---------------	--	----------------

Unit I

Introduction to Biostatistics - Clinical Trials - Goals of Clinical Trials - Phases of Clinical Trials - Classification of Clinical Trials - Randomization: Fixed Allocation, Simple, Blocked, Stratified, Baseline Adaptive and Response Adaptive - Blinding: Single, Double and Triple - Designs for Clinical Trials: Parallel Groups Design, Cluster Randomization Designs, Crossover Designs.

Unit II

Multiple Regression – Assumptions – uses – Estimation and interpretation of coefficients – Testing the regression coefficients – Coefficient of determination – Testing model adequacy. Logistic regression: Introduction – Logistic regression model – relative risk – logit – odds ratio – properties of odds ratio – relationship between odds ratio and relative risk – Maximum Likelihood estimates and interpretation – Test for coefficients - Test of overall regression and goodness of fit using Maximum Likelihood technique – Inference for Logistic regression – Deviance statistics, Wald test, LR test and score test.

Unit III

Introduction to Survival analysis - terminology and functions of survival analysis - goals - Basic data layout - Censoring-different types of censoring - Parametric survival models based on basic life time distributions - Exponential, Weibull, Gamma and Log- logistic.

Unit IV

Kaplan-Meier's method - general features - the log rank test for two groups, several groups - alternatives to the log rank test - Cox PH model and its features - ML estimation of the Cox PH model-Hazard Ratio-adjusted survival curves-Cox likelihood.

Unit V

Evaluating the proportional Hazards Assumptions - Overview - graphical approach - log-log plots - Observed versus expected plots- time - dependent covariates - Stratified Cox Procedure - hazard function - Extension of the Cox PH Model - hazard ratio formula - extended Cox likelihood.

Books for References

17S4P3	Statistical Practical II	Core 16
---------------	---------------------------------	----------------

The maximum marks for continuous internal assessment and end semester University examination for Statistics Practical II shall be fixed as 40 and 60, respectively. The continuous internal assessment shall involve test and record work. The question paper at the end semester examination shall consist of four questions with internal choice. A candidate shall attend all the four questions, each of which shall carry 15 marks. The examination shall be conducted at the end of Semester IV. Problems relating to the following topics which are covered in Semester III shall form the basis for setting the question paper:

1. Statistical inference

Most powerful test – Uniformly Most Powerful test – Likelihood Ratio test – Chi-Square goodness of fit test – Non-parametric Tests

2. Linear Models and Design of Experiments

Linear Models and Estimation of BLUE – Analysis of Covariance – Greco Latin Square Design – Split plot and Strip plot techniques – 2^n and 3^n factorial experiments with and without total and partial confounding - BIBD – PBIBD - Youden Square Design – Lattice Design.

3. Operations Research

Artificial Variable – Dual Simplex methods – Integer and nonlinear programming problems - PERT and CPM techniques – Inventory problems – Queueing problems.

4. Biostatistics and Survival Analysis

Fitting of regression models – Simple and multiple regression models - Logistic regression – Graphical plot - Testing model adequacy – Fitting of life distributions – Kaplan-Meier's estimates.

17S4P4	Statistical Software Practical using R	Core 17
---------------	---	----------------

The maximum marks for continuous internal assessment and end semester University examination for Statistical Software Practical II shall be fixed as 40 and 60, respectively. The continuous internal assessment shall involve test and record work. The question paper at the end semester examination shall consist of four questions with internal choice. A candidate shall attend all the four questions, each of which shall carry 15 marks. The examination shall be conducted at the end of Semester IV. The aim of this paper is to utilize theoretical knowledge gained and to develop computational and technical skills for real life applications emphasizing the importance of R programming. Problems relating to the following topics shall form the basis for setting the question paper:

1. Using R command-Operations on vectors, logical vector, index vector and matrices. Creating and Manipulation of data frames, using various user defined functions..
2. Graphical procedures - Bar chart, Box plots, Histograms using single & multiple groups.
3. Calculations of probability functions and generation of random samples for various discrete and continuous distributions.
4. Writing R functions for descriptive statistics, correlations and regression co-efficients.
5. Statistical Inference: Parametric and Non-Parametric test. Experimental design for One way and Two way ANOVA
6. Execution of control charts and Acceptance sampling plans
7. Using R functions writing program for Linear models and least square techniques.
8. Multivariate techniques.

17S4PV	Project and Viva-Voce	Core 18
---------------	------------------------------	----------------

All the admitted candidates shall have to carry out a project/dissertation work during the fourth semester under the supervision of the faculty of the Department of Statistics in the University. Candidates shall have to submit three copies of the report of the project/dissertation work at the end of the fourth semester at least two weeks before the last working day and shall have to appear for a viva-voce examination. The report shall be evaluated and viva-voce examination shall be conducted jointly by an External Examiner and the Project Guide. The maximum marks for the project/dissertation report and viva – voce examination shall be fixed as 100, which is split with the following components:

Internal Assessment Marks by the Project/Dissertation Guide	:	25 marks
Evaluation of Project/Dissertation Report jointly by the External Examiner and the Guide	:	50 marks
Conduct of Viva-Voce Examination jointly by the External Examiner and the Guide	:	25 marks

Syllabus for Elective Papers

(For Candidates admitted during 2019 - 2020 and onwards)

17S13EA	Official Statistics	Elective 1
---------	---------------------	------------

Unit I

Statistical System in India: Central and State Government Organizations, Functions of Central Statistical Organization (CSO), National Sample Survey Organization (NSSO). Organization of large scale sample surveys. General and special data dissemination systems.

Unit II

Official statistics: Meaning, methods of collection, limitations and reliability. Principal publications containing data on the topics such as population, agriculture, industry, trade, prices, labour and employment, transport and communications - Banking and finance.

Unit III

System of Collection of Agricultural Statistics - Crop forecasting and estimation - Productivity, fragmentation of holdings - Support prices - Buffer stocks - Impact of irrigation projects. Statistics related to industries, foreign trade - Balance of payment - Inflation - Social statistics.

Unit IV

Index Numbers: Price, Quantity and Value indices. Price Index Numbers: Construction, Uses, Limitations, Tests for index numbers, Chain Index Number. Consumer Price Index, Wholesale Price Index and Index of Industrial Production – Construction of index numbers and uses.

Unit V

National Income – Measures of national income - Income, expenditure and production approaches - Applications in various sectors in India. Measurement of income inequality: Gini's coefficient, Lorenz curves, Application of Pareto and Lognormal as income distribution.

Books for Study and Reference

1. Allen R. G. D. (1975). Index Numbers in Theory and Practice, Macmillan.
2. Bhaduri, A. (1990). Macroeconomics: The Dynamics of Commodity Production, Macmillan India Limited, New Delhi.
3. Branson, W. H. (1992). Macroeconomic Theory and Policy, Third Edition, Harper Collins Publishers India (P) Ltd., New Delhi.
4. C. S. O. (1990). Basic Statistics Relating to the Indian Economy.
5. C.S.O. (1995). Statistical System in India.
6. C. S. O. (1999). Guide to Official Statistics.
7. Goon A. M., Gupta M. K., and Dasgupta. B. (2001), Fundamentals of Statistics, Vol. 2, World Press, India.
8. Mukhopadhyay, P. (2011). Applied Statistics, Second Edition, Books & Allied Ltd, India.
9. Panse, V. G. (1964). Estimation of Crop Yields (FAO), Food and Agriculture Organization of the United Nations.

17S13EB	Demography and Vital Statistics	Elective 2
----------------	--	-------------------

Unit I

Population Theories: Coverage and content errors in demographic data, use of balancing equations and Chandrasekharan - Deming formula to check completeness of registration data. Adjustment of age data, use of Myer and UN indices, Population composition, dependency ratio.

Unit II

Introduction and sources of collecting data on vital statistics, errors in census and registration data. Measurement of population, rate and ratio of vital events. Measurements of Mortality: Crude Death Rate (CDR), Specific Death Rate (SDR), Infant Mortality, Rate (IMR) and Standardized Death Rates.

Unit III

Stationary and Stable population, Central Mortality Rates and Force of Mortality. Life (Mortality) Tables: Assumption, description, construction of Life Tables and Uses of Life Tables.

Unit IV

Measurements of Fertility: Crude Birth Rate (CBR), General Fertility Rate (GFR), Specific Fertility Rate (SFR) and Total Fertility Rate (TFR). Measurement of Population Growth: Crude rates of natural increase, Pearl's Vital Index, Gross Reproduction Rate (GRR) and Net Reproduction Rate (NRR).

Unit V

Special Distribution of Population – Basic concepts – Measurements and Models of Migrations. Components of Population Growth and Change – Methods of Projection – Logistic Equation – Component Method of Projection.

Books for Study and Reference

1. Barclay, G. W. (1958). Techniques of Population Analysis, John Wiley and Sons, New York.
2. Biswas, S. (1988). Stochastic Processes in Demography & Application, Wiley Eastern Ltd., India
3. Bogue, D. J. (1969). Principles of Demography, Wiley, New York.
4. Croxton, F. E., Cowden, D. J., and Klein, S. (1973). Applied General Statistics, Third Edition, Prentice Hall of India Pvt. Ltd.
5. Goon, A. M., Gupta, M. K., and Dasgupta, B. (2008). Fundamentals of Statistics, Vol. II, Ninth Edition, World Press, India.
6. Keyfitz, N., and Caswell, H. (2005). Applied Mathematical Demography, Springer - Verlag, New York.
7. Mishra, B. D. (1980). An Introduction to the Study of Population, South Asian Publishers Pvt. Ltd., New Delhi.
8. Mukhopadhyay, P. (2011). Applied Statistics, Second Edition, Books and Allied (P) Ltd., India.

17S43EC	Econometrics	Elective 3
----------------	---------------------	-------------------

Unit I

Introduction to Econometrics- Meaning and Scope – Methodology of Econometrics – Nature and Sources of Data for Econometric analysis – Types of Econometrics

Unit II

Aitken's Generalised Least Squares(GLS) Estimator, Heteroscedasticity, Auto-correlation, Multicollinearity, Auto-Correlation, Test of Auto-correlation, Multicollinearity, Tools for Handling Multicollinearity

Unit III

Linear Regression with Stochastic Regressors, Errors in Variable Models and Instrumental Variable Estimation, Independent Stochastic linear Regression, Auto regression, Linear regression, Lag Models

Unit IV

Simultaneous Linear Equations Model : Structure of Linear Equations Model, Identification Problem, Rank and Order Conditions, Single Equation and Simultaneous Equations, Methods of Estimation- Indirect Least squares, Least Variance Ratio and Two-Stage Least Square

Unit V

Statistical Inference in Simultaneous Equations Models : Conditions for Identification, Asymptotic properties of Two-Stage Least Squares Estimator, Limited Information Maximum Likelihood and K-Class Estimators, Methods of Three- Stage Least Squares.

Books for Study

1. Johnston, J. (1997). Econometric Methods, Fourth Edition, McGraw Hill
2. Gujarathi, D., and Porter, D. (2008). Basic Econometrics, Fifth Edition, McGraw-Hill

Books for References

1. Intriligator, M. D. (1980). Econometric Models-Techniques and Applications, Prentice Hall.
2. Theil, H. (1971). Principles of Econometrics, John Wiley.
3. Walters, A. (1970). An Introduction to Econometrics, McMillan and Co.

17S13ED	Data Mining	Elective 4
----------------	--------------------	-------------------

Unit I

Introduction – An expanding universe of data – production factor – data mining – data mining verses query tools – data mining in marketing – practical applications. Learning: Introduction – self learning – machine learning and methodology of science – concept learning.

Unit II

Data mining and the data warehouses: Introduction – need – decision support system – integration with data mining – client / server data warehousing – multi processing machine – cost justification.

Unit III

Knowledge discovery process: Introduction – data selection – cleaning – enrichment – coding – data mining and its techniques – reporting.

Unit IV

KDD environment: Introduction – different forms of knowledge – getting started – data selection – cleaning – enrichment – coding – reporting - ten golden rules.

Unit V

Customer profiling – predicting bid behavior of pilots – learning of compression of data sets – noise and redundancy – fuzzy database – the traditional theory – relation to tables – statistical dependencies – data mining primitives.

Books for Study and References

1. Adriaans, P., and Zantinge, D. (1996). Data Mining, First Edition, Addison Wesley Professional, London
2. Soman, K. P., Diwakar, S., and Ajay, V. (2006). Data Mining: Theory and Practice, PHI Learning Pvt. Ltd., New Delhi.
3. Delmater, R., and Hancock, M. (2001). Data Mining Explained, Digital Press, MA..
4. Hand, D., Mannila, H., and Smyth, P. (2001). Principles of Data Mining, MIT Press, London.

17S13EE	Applied Regression Analysis	Elective 5
---------	-----------------------------	------------

Unit I

Simple regression models with one independent variable, assumptions, estimation of parameters, standard error of estimator, testing the significance of regression coefficients, standard error of prediction. Testing of hypotheses about parallelism, equality of intercepts, congruence. Extrapolation, optimal choice of independent variable.

Unit II

Diagnostic checks and correction: graphical techniques, tests for normality, uncorrelatedness, homoscedasticity, lack of fit, modifications like polynomial regression, transformations on Y or X. Inverse regression.

Unit III

Multiple regression: Standard Gauss Markov Setup. Least square (LS) estimation, Error and estimation spaces. Variance - Covariance of LS estimators. Estimation of error variance, case with correlated observations. LS estimation with restriction on parameters. Simultaneous estimation of linear parametric functions.

Unit IV

Non-linear regression: Linearization transforms, their use & limitations, examination of non-linearity initial estimates, iterative procedures for NLS grid search, Newton-Raphson, steepest descent, Marquardt's methods. Logistic Regression: Logic transform, ML estimation, Tests of hypotheses, Wald test, LR test, score test, test for overall regression.

Unit V

Multiple logistic regressions, forward, backward method. Interpretation of parameters relation with categorical data analysis. Generalized Linear model: link functions such as Poisson, binomial, inverse binomial, inverse Gaussian and gamma.

Books for Study and Reference

1. Draper, N. R. and Smith, H. (1998). Applied Regression Analysis, Third Edition, John Wiley and Sons.
2. Montgomery, D. C., Peck, E. A., and Vining, G. G. (2012). Introduction to Linear Regression Analysis, Fifth Edition, John Wiley & Sons, NY.
3. Hosmer, D.W., Lemeshow, S., and Sturdivant, R. X. (2013). Applied Logistic Regression, Third Edition, John Wiley & Sons, NY.
4. Seber, G.E.F. and Wild, C.J. (2003). Nonlinear Regression, John Wiley & Sons, NY.
5. Neter, J., Wasserman, W., and Kutner, M.H. (1989). Applied Linear Statistical Models, Second Edition, Irwin, IL.

**List of Elective & Supportive Papers Offered to the
Students of Other Departments**

Scheme of Examinations

Elective Papers					
Subject Code	Title of the Papers	Credits	Int. Marks	Ext. Marks	Total Marks
17STAGE13	Bio-Statistics	4	40	60	100
17STAGE14	Probability and Statistics	4	40	60	100
17STAGE15	Statistics for Management	4	40	60	100
17STAGE16	Operations Research	4	40	60	100
17STAGE24	Actuarial Statistics	4	40	60	100

Supportive Papers					
Subject Code	Title of the Papers	Credits	Int. Marks	Ext. Marks	Total Marks
17STAGS17	Descriptive Statistics	2	20	30	50
17STAGS18	Data Analysis	2	20	30	50
17STAGS19	Statistical Methods for Industries	2	20	30	50
17STAGS32	Statistical Methods for Biologists	2	20	30	50
17STAGS63	Elements of Operations Research	2	20	30	50
17STAGS64	Statistical Methods for Researchers	2	20	30	50

17STAGE13	Biostatistics	Elective 1
------------------	----------------------	-------------------

Unit I

Nature of biological and Clinical experiments and data - Classification of data -Need and nature of tabulation - Charts and Diagrams for data - Bar diagrams, pie diagrams, pictograms, histograms-frequency curves and their use.

Unit II

Measures of Central tendency - Mean, Median, Mode, Geometric mean, Use of these averages in biological Studies.

Measures of deviation and Standard deviation – Co-efficient of variation -Measure of Skewness and Kurtosis.

Unit III

Correlation and regression theory - Correlation coefficient - rank correlation -Regression equations (only problems) - Multiple and Partial correlation and regression.

Basic concepts of sampling - Simple random sample - Stratified sample -Systematic samples.

Unit IV

Test of significance based on large sample test: for mean - Variance and proportions-test for means, Variance and attributes using t, F and Chi-Square distribution. Test for correlation regression coefficients, Chi-Square test for goodness of fit.

Unit V

Analysis of variance: One way and two way Classifications - Completely Randomized blocks - Randomized Block Design and Latin Square Design (Simple problems based on biological and biochemical data).

Books for Study and Reference

1. Sundar Rao, P. S. S., and Richard, J. (2012). Introduction to Biostatistics and Research Methods, Fifth Edition, PHI Learning Private Limited, New Delhi.
2. Lewis, A. E. (1984). Biostatistics, Van Nostrand Reinhold Publications.
3. Daniel, W. W. (2013). Bio Statistics: Basic Concepts and Methodology for the Health Sciences, 10th Edition, John Wiley & Sons, NY.
4. Campbell, R. C. (1967): Statistics for Biologists, University Press, Cambridge, UK.
5. Zar, J. H. (2014). Biostatistical Analysis, Fifth Edition, Pearson Education India, New Delhi.

17STAGE14	Probability and Statistics	Elective 2
-----------	----------------------------	------------

Unit I

Sample spaces – Events – Probability axioms – Conditional Probability – Independent events – Bayes' formula - Random variables - Distribution functions – Marginal distributions, Conditional distribution – Stochastic independence. Expectation – Conditional expectation and Conditional Variance. Moment generating functions – Cumulant generating functions.

Unit II

Probability distributions – Binomial, Poisson, geometric, uniform, exponential, normal, gamma, beta (generating function, Mean, variance & Simple problems). Probability density function & Properties to t,f, Chi-square distributions.

Unit III

Correlation and Regression: Multiple and partial correlation – Multiple regression (Only Problems). Test for means, Variances & attributes using the above distributions large sample tests – tests for means, variances and proportions. Analysis of variance: One way and two way classifications – Complete randomized block, randomized block and Latin square designs (only problems).

Unit IV

Estimation: Point estimation – Characteristics of estimation – Interval estimation – Interval estimates of Mean, Standard deviation, proportion, difference in Means & ratios of Standard deviations. Time series analysis: Trend & Seasonal variations – Box – Components of time Series – Measurement of trend – linear & Second degree Parabola.

Unit V

Statistical quality control – Statistical basis for control charts – Control limits – Control Charts for variables – X,R Charts, Charts for defective – P, nP Charts – charts for defects – C Charts..

Books for Study

1. Trivedi, K. S. (1982). Probability and Statistics with Reliability, Queueing & Computer Applications, Prentice Hall, NJ..
2. Gupta, S C., and Kapoor, V. K. (2018). Fundamentals of Mathematical Statistics, Eleventh Edition, Sultan Chand & Sons, New Delhi..

Books for Reference

1. Montgomery, D, C., and Johnson, .L. A. (1976). Forecasting and Time Series Analysis, McGraw Hill, NY.
2. Besterfield, D. H. (1998). Quality Control, Fifth Edition, Prentice Hall, NJ.

17STAGE15	Statistics for Management	Elective 3
------------------	----------------------------------	-------------------

Unit I

Nature of quantitative analysis in Management, purpose of Statistics, Measurements, attributes, Units, Variables: discrete and Continuous. Need and nature of tabulation-Charts and diagrams for data-Bar diagrams, pie diagrams, pictograms-frequency curves.

Unit II

Measure of Central tendency-Mean, Median, Mode-Measure of dispersion - Quartile deviation, Mean deviation and Standard deviation-Coefficient of variation-Measure of Skewness and Kurtosis.

Unit III

Concepts of events-probability of events-joint, conditional, Marginal probabilities-Probability distribution of a Random variable-Expected value and variance.

Unit IV

Theoretical probability distribution: Binomial, Poisson, Normal and students t distributions.

Unit V

Estimation-population and sample-population parameters-Central Limit and theorem-point estimate and interval estimates of population mean and population proportion. Concept of index numbers - Construction of index numbers. Understanding index numbers applicable in the context of economics, business and Management.

Books for Study and Reference

1. Levin, R. I., and Rubin, D. S. (2013). Statistics for Management, Seventh Edition, Pearson International Edition, New Delhi.
2. Paul Marton, Applied Business Statistics, Holt and Reinlast.
3. Goode, W. J., and Hatt, P. K. (1952). Methods on Social Research, McGraw-Hill, NY.

17STAGE16	Operations Research Methods	Elective 4
------------------	------------------------------------	-------------------

Unit I

Linear Programming-Graphical Method for two-dimensional problems-General Problem of Linear programming-Variations definitions-Statements of basic theorems & properties. Phase I and Phase II of the Simplex Method-Sensitivity analysis-transportation Problem and its Solution. Assignment Problem and its Solution Duality and Shadow Price.

Unit II

Queueing theory: Characteristics of queueing Systems-Steady State M/M/1, M/M/C and M/M/K queueing Models.

Replacement theory: Replacement of items that deteriorate- Replacement of items that fail – Group replacement.

Unit III

Inventory theory: Costs involved in inventory Problems-Single item deterministic Model-Economic lot size Models without shortages & with shortages having production rate infinite & finite.

Unit IV

Decision Making: Decision under certainty, uncertainty & under risk. Decision trees-expected value of Project information & imperfect information.

Unit V

PERT and CPM: Arrow networks-time estimates-earliest expected time, latest allowable occurrence- critical path- probability of meeting scheduled time of completeness of projects-calculations on CPM networks, various floats for structures- external path-updating project-operation time cost trade of curve.

Books for Study and Reference

1. Kanti Swarup, Gupta P.K., and Man Mohan.(1977): Operations Research, Sultan Chand and Sons.
2. Taha, H.A (1982): Operations Research, Third Edition, Collier- McMillan.
3. Ackoff, R. L., and Sasieni, M. W., (1968). Fundamentals of Operations Research, John Wiley and Sons, NY.

17STAGE24	Actuarial Statistics	Elective 5
-----------	----------------------	------------

Unit I

Elements of Compound Interest (nominal and effective rates of interests). Annuities certain, Present values, accumulated amounts, deferred annuities – Simple problems.

Unit II

Redemption of loans, Sinking funds, The Average yield on the life fund of an insurance office. Simple Problems.

Unit III

The mortality table – construction, characteristics and uses of mortality table . The features of Indian assured lives, Orientals 1925-1935 mortality tables. The LIC (1961-64) table and the LIC(1970-7 table – Simple Problems

Unit IV

Premiums, general principles, natural premiums, level premiums, office premiums, loading for expenses. With profit and without profit premiums, adequacy of premiums relative consistency.

Unit V

Life office valuation, General principles, Policy values, Retrospective and prospective methods of valuation of liabilities. (net premium, gross premium and bounds reserve) Sources of surplus principle method of surplus.

Books for Study

1. Federation of Insurance Institutes study courses: Mathematical Basic of the Life Assurance.

Books for Reference

1. Donald D.W.A. (2016). Compound Interest and Annuities-Certain, Cambridge University Press, UK.
2. Neil, A. (1977). Life Contingencies, Heinemann for the Institute of Actuaries and the Faculty of Actuaries.
3. Gupta, S. C., and Kapoor, V. K. (2014). Fundamentals of Applied Statistics, Fourth Edition, Sultan Chand & Sons, New Delhi.

17STAGS17	Descriptive Statistics	Supportive 1
------------------	-------------------------------	---------------------

Unit I

Origin-Scope-Functions, limitations, uses and Misuses of statistics. Classification and Tabulation of data, Diagrammatic and graphic representation of data.

Unit II

Measure of Central tendency–Measures of Dispersion-relative measures of dispersion-Skewness and Kurtosis-Lorenz’s curve.

Unit III

Elementary Probability space-Statistical probability Axiomatic approach to probability-Finitely additive and countable additive probability functions-Addition and multiplication theorems-Conditional probability-Bayes theorem-Simple problems.

Unit IV

Random variables-Discrete and continuous random variables-Distribution function and probability density function of a random variable-Expectation of a random variable-Addition and product theorems- Evaluation of standard measures of location, dispersion, Skewness and Kurtosis.

Unit V

Simple linear correlation and regression-Regression equations-their properties spearman’s Rank correlation Co-efficient.

Books for Study

1. Goyal, J. K., and Sharma, J. N. (2014), Mathematical Statistics, Krishna Prakashan Private Limited, Meerut.
2. Gupta, S. P. (2012). Statistical Methods, Sultan Chand & Sons, New Delhi.
3. Gupta, S C., and Kapoor, V. K. (2018). Fundamentals of Mathematical Statistics, Eleventh Edition, Sultan Chand & Sons, New Delhi.

Books for Reference

1. Goon, A. M., Gupta, M. K., and Das Gupta, B. (2013). Fundamentals of Statistics, Vol.1, World Press Private Ltd, Calcutta.
2. Rohatgi, V. K. (1988). An Introduction to Probability Theory and Mathematical Statistics, Wiley Eastern (India) Ltd., New Delhi.

17STAGS18	Data Analysis	Supportive 2
-----------	---------------	--------------

Unit I

Sampling procedure - determination of Sample size and selection of sample formation of questionnaire- Structured and unstructured questionnaire. Field work- Execution of survey-data collection, Scaling techniques -Guttman scale-Likert 5 points scale.

Unit II

Summarizing data- tabulation- averages- Dispersions- measurement of risk- relative measures of dispersion-efficiency and consistency- comparison of two or more populations-large samples test, small sample test - ANOVA - Application of Statistical packages.

Unit III

Association of attributes: Chisquare test- correlation-rank difference correlation/biserial correlation, point biserial correlation. Significance of correlation, rank correlation and biserial correlation coefficient, partial and multiple correlations. Significance of multiple regression equation-significance of b_0 , b_1 .. b_n the liner regression coefficient- application of statistical packages.

Unit IV

Non-parametric tests: Tests for randomness, Run test, Sign test, and Mann Whitney U test. Wilcoxon signed rank test. Median test- Statistical packages

Unit V

Curve fitting - Curves of type: $Y = a + bx$, $Y = a + bx + cx^2$, $Y = ab^x$ and $Y = a.e^{bx}$. Time series - estimates of trend and seasonal variation -forecasting -statistical packages.

Books for Study and Reference

1. Siegel, S., and Castellan, N. J. (1988): Non-Parametric Statistics for Behavioral Science McGraw Hill Book Co, New York
2. Srivastava U. K., Shenoy, G. C., and Sharma, S. C. (1989). Quantitative Techniques Managerial Decision Wiley Eastern (India) Ltd., New Delhi.
3. Gupta, S C., and Kapoor, V. K. (2018). Fundamentals of Mathematical Statistics, Eleventh Edition, Sultan Chand & Sons, New Delhi..
4. Garrett, H. E, and Woodworth, R. S. (1973). Statistics in Psychology and Education, Vakils, Feffer and Simons Private Ltd., Mumbai.
5. Hoel, P. G. (1957). Introduction to Statistics, Asia Publishing Housing Private Ltd., New Delhi.
6. Kothari, C. R. (1984). Quantitative Techniques, Third Edition, Vikas Publishing House Private Ltd., New Delhi.
7. Kothari, C. R. (2004). Research Methodology: Methods and Techniques, Second Edition, New Age International Private Ltd., New Delhi.

17STAGS19	Statistical Methods for Industries	Supportive 3
------------------	---	---------------------

Unit I

Historical development of Statistical Quality Control - Meaning of Quality - improvement - Quality cost - Total Quality Management - causes of variations - X, R, P and C charts.

Unit II

Acceptance sampling plans by Attributes - Single Sampling Plan - Double Sampling Plan - OC curves - AOQ, ATI curves, Dodge Roaming AOQL and LTPD plans, MIL - STD 105D plans.

Unit III

Variable Sampling Plan - One sided and Two sided specifications - Taguchi philosophy and contributions to Quality Improvement (Basic concepts only)

Unit IV

Test of significance and design of experiments: Tests based on t, F and chi-square distributions - Analysis of variance - One way and Two way classification Complete Randomized Design(CRD), Randomized Block Design(RBD) , Latin Square Design(LSD).

Unit V

Basic of reliability theory - Life time distribution - Hazard rate- Survival function- Exponential, Weibull, Gamma and life time distributions

Books for Study and Reference

1. Montgomery, D. C. (2008). Introduction of Statistical Quality Control, Sixth Edition, John Wiley and Sons, NY.
2. Sivazlian, B. D., and Stanfel, L. E. (1975), Analysis of Systems in Operations Research, Prentice Hall, Engle-wood Cliffs, NJ.

17STAGS32	Statistical Methods for Biologists	Supportive 5
-----------	------------------------------------	--------------

Unit I

Nature of Biological and Clinical experiments of data-Classification and tabulation of data-Diagrammatic representation of data- Histogram and frequency curves

Unit II

Measures of Central tendency-Mean, Median, Mode, Geometric mean, Harmonic Mean- Measures of deviation – Range, Mean deviation, Quartile and standard deviation – Measures of Skewness and Kurtosis.

Unit III

Correlation : Rank Correlation – Multiple and Partial Correlation – Regression – Regression equations for biological problems.

Unit IV

Basic concepts of sampling – Simple random sample – Stratified sample – systematic sample – cluster sample. Test of significance based on large sample – Mean, Variance and Proportions.

Unit V

Analysis of variance –One way and Two way classifications – Completely Randomized blocks – Randomized Block design and Latin Square Design (Simple problems based on biological data)

Books for Study and Reference

1. Lewis, A. E. (1984). Biostatistics, Van Nostrand Reinhold Publications.
2. Campbell, R. C. (1967): Statistics for Biologists, University Press, Cambridge, UK.
3. Kapur, J. N., and Saxena, H. C. (1986). Mathematical Statistics, S. Chand & Co., Ltd., New Delhi.
4. Pagano, M., and Gauvreau, K. (2018). Principles of Biostatistics, Second Edition, Chapman and Hall/CRC Press, NY.

17STAGS63	Elements of Operations Research	Supportive 6
------------------	--	---------------------

Unit I

Linear Programming Problem – Graphical Method – General Problem of Linear Programming – Simplex Method – Phase I and Phase II Problems – Transportation and Assignment Problems.

Unit II

Replacement theory : Replacement of Items that deteriorate – Replacement of items that fail completely – Individual and group replacement policy.

Unit III

Sequencing Theory – Processing ‘n’ jobs through 2 machines – Processing ‘n’ jobs through 3 machines – Processing ‘n’ jobs through ‘m’ machines.

Unit IV

Network Theory – Introduction to Network – Determination and flow for Critical Path Method – Project Evaluation Review Techniques and its differences.

Unit V

Inventory Theory – Meaning of Inventory – Factors involved in Inventory – Economic Models with and without shortages.

Book for Study and Reference

1. Kanti Swarup, Gupta, P. K., and Man Mohan. (2017). Operations Research, Nineteenth Edition, Sultan Chand & Sons, New Delhi.
2. Taha, H. A. (1982). Operations Research: An Introduction, 3rd Edition, McMillan Publishing Co., Inc., London.

17STAGS64	Statistical Methods for Researchers	Supportive 4
-----------	-------------------------------------	--------------

Unit I

Definition of Statistics and its applications in various disciplines - Collection of Data - Classification, Tabulation and graphical representation of data- Construction of univariate and Bivariate frequency distribution-measures of central tendency-measures of dispersion - coefficient of variation.

Unit II

Random experiment-sample space-events-mathematical and statistical definition of probability-conditional probability-Bayes' theorem-random variable-distribution function- moments-Binomial distribution-Poisson distribution-normal distribution and their properties

Unit III

Scatter diagram-Karl Pearson's coefficient of correlation - concurrent deviation method-coefficient of determination-Spearman's Rank correlation-Linear regression-regression lines.

Unit IV

Tests of significance-types of hypotheses-two types of errors-critical region-level of significance, small sample tests based on t, F distribution, Chi-square test of goodness of fit, contingency table-test of independence of factors-Large sample tests.

Unit V

Test of equality of several populations means, one way and two way analysis of variance. Non-parametric tests-sign, Run and Median tests-two sample rank test-sampling and its uses, sampling methods- unrestricted Random sampling (SRS)- Restricted Sampling (Stratified and Systematic).

Books for Study and Reference

1. Agarwal, B. L. (2013). Basic Statistics, New Age International Private Limited, New Delhi.
2. Sokal, R. R. and Rohlf, F. J. (1973). Introduction to Bio Statistics, W.H. Freeman & Co., Ltd., SF.
3. Snedecor, G. W., and Cochran, W. G. (1967). Statistical Methods, Oxford-IBH, New Delhi.
4. Zar, J. H. (2014). Biostatistical Analysis, Fifth Edition, Pearson Education India, New Delhi.
