

M. Sc. BioInformatics

Syllabus

UNIVERSITY DEPARTMENT

Program Code: BIIA

2021 – 2022 onwards

BHARATHIAR UNIVERSITY

(A State University, Accredited with “A” Grade by NAAC,
Ranked 13th among Indian Universities by MHRD-NIRF,
World Ranking: Times -801-1000, Shanghai -901-1000, URAP - 982)

Coimbatore - 641 046, Tamil Nadu, India

Program Educational Objectives (PEOs)	
The M. Sc. Bioinformatics program describe accomplishments that graduates are expected to attain within five to seven years after graduation	
PEO1	Should be aware of available bioinformatics resources and information in databases
PEO2	Apply critical, analytical and problem solving skills to deal with bioinformatics research
PEO3	Gain a deep understanding of the biomolecular systems
PEO4	Attain knowledge to identify the research problems in molecular biology
PEO5	Develop very efficient algorithms to extract biological knowledge from complex dataset
PEO6	Develop programming skills to write their own codes and scripts to resolve research accomplishments
PEO7	Possess drafting and writing skills to enhance scientific communication
PEO8	Update in accordance with recent scientific advancements and technology
PEO9	Gain higher level degrees to pursue a career in academics or scientific organizations
PEO10	Should be able to pursue research and also in industry placement in the sectors of pharmaceutical, agricultural, environmental science and food industries

Program Specific Outcomes (PSOs)	
After the successful completion of M.Sc. Bioinformatics program, the students are expected to	
PSO1	Develop applications to solve biological problems by utilizing the Bioinformatics algorithms and programming languages
PSO2	Manipulate scientific datasets and retrieve and access them through biological databases
PSO3	Develop knowledge and skills to analyse and interpret biological data for research requirements
PSO4	Develop good scientific communication skills
PSO5	Gain knowledge of the tools, frameworks, and libraries for bioinformatics applications
PSO6	Undergo seminars, conferences and hands on workshops to facilitate domain expertise

Program Outcomes (POs)	
On successful completion of the M. Sc. Bioinformatics program	
PO1	Should be able to understand the basic principles and concepts of biology, computer science and mathematics
PO2	Able to apply the knowledge in Bioinformatics such as computational biology, chemical principles that underlie biochemistry, molecular biology and genomics
PO3	Develop and implement software effectively to retrieve information from biological databases and use this information for computation
PO4	Comprehend and provide solution to enable designing and implementing new algorithms and analysis methods
PO5	Understand the concept of intersection of life and information sciences, structure-function relationships, information theory, gene expression, and database queries
PO6	Develop computational techniques and diversified bioinformatics tools for processing data, including statistical, machine learning and data mining techniques
PO7	Design and implement efficient and reliable bioinformatics solutions by optimizing the usage of existing tools and developing new ones
PO8	Analyze and think critically the research methods in Bioinformatics such as dissertation, research, preparation and presentations at scientific meetings, seminars and qualifying examinations
PO9	Develop an insight into scientific methodology and advances in bioinformatics research
PO10	Have an understanding of current technology trends as well as future directions and recognize the need and develop the skills necessary for professional development

BHARATHIAR UNIVERSITY: COIMBATORE 641 046

M. Sc. Bioinformatics

Curriculum (University Department)

(For the students admitted during the academic year 2021 – 22 onwards)

Course Code	Title of the Course	Credits	Hours		Maximum Marks		
			Theory	Practical	CIA	ESE	Total
FIRST SEMESTER							
13A	Molecular Cell Biology and Genetic Engineering	4	60	-	50	50	100
13B	Artificial Intelligence and Applications in Biological Sequence Analysis	4	60	-	50	50	100
13C	Programming in C and C++	4	60	-	50	50	100
13D	Immunology & Immunoinformatics	4	60	-	50	50	100
13P	Practical-I wet lab- Microbial and Phytochemical techniques	4	-	60	50	50	100
1EA	Mathematical & Statistical applications in bioinformatics	4	60		50	50	100
1EB	Biostatistics						
NEW GS???	Supportive-I Advanced Bioinformatics	2	30		25	25	50
Total		26			325	325	650
SECOND SEMESTER							
23A	Perl and Python programming for Bioinformatics	4	60		50	50	100
23B	Molecular interactions	4	60		50	50	100
23C	Biophysics and Crystallography	4	60		50	50	100
23D	Pharmacogenomics and Drug design	4	60		50	50	100
2EA	Biodiversity Informatics						
2EB	Basics of Cheminformatics	4	60		50	50	100
23P	Practical-II Computer Programming	4	-	60	50	50	100
GS125	Supportive-II Principles of Drug Discovery	2	30		25	25	50
Total		26			325	325	650
THIRD SEMESTER							
33A	Genomics and NGS	4	60		50	50	100
33B	Proteomics	4	60		50	50	100
33C	Visual Basic.NET with RDBMS	4	60		50	50	100
33D	Molecular Modeling	4	60		50	50	100
3EA	Systems Biology	4	60		50	50	100

3EB	Big Data Analytics						
GS02	Supportive-III Advanced Bioinformatics	2	30		25	25	50
33P	Practical-III Molecular Techniques	4	-	60	50	50	100
33Q	Practical-IV Biological Sequence Analysis and Computer Aided drug Design	4	-	60	50	50	100
Total		30			375	375	750
FOURTH SEMESTER							
47V	Project / Dissertation + Viva-voce	8	-	-	100	100	200
Total		8	-	-	100	100	200
Grand Total		90			1125	1125	2250
CO-SCHOLASTIC COURSES							
ONLINE COURSES*							
	Swayam, MOOC Course etc.,	2	-	-	-	-	50
JOB ORIENTED COURSES**							
J01	Bioinformatics Algorithms and Machine Learning	4	30	-	50	-	50
J02	IT Tools and Applications	4	30	-	50	-	50
J03	Microbial Genomics	4	30	-	50	-	50
J04	Web Designing	4	30	-	50	-	50
VALUE ADDED COURSES***							
VA1	Communication Skills Enhancement	2	15	-	50	-	50
VA2	Soft Skills Development	2	15	-	50	-	50
VA3	Journal Seminar and Aptitude Skills	2	15	-	50	-	50
VA4	Project Proposal Writing Skills	2	15	-	-	-	50

* SWAYAM –MOOCs – Online course is mandatory and it should be completed within third semester

**JOB ORIENTED COURSE - Two courses to be completed, each year one course to be completed

***VALUE ADDED COURSE - Minimum two courses to be completed, each year one course to be completed

Duration of the M.Sc Bioinformatics course: 2 years

Eligibility:

A pass in any one of the following degree courses of UGC recognized universities.
B.Sc. / B.Tech. in all Science disciplines, B.V.Sc. / B.Pharm / M.B.B.S and B.D.S.

Course code	13A	MOLECULAR CELL BIOLOGY AND GENETIC ENGINEERING	L	T	P	C
Core/Elective/Supportive	Core		4	-	-	4
Pre-requisite	Basics of Biology		Syllabus Version		2021-22	
Course Objectives:						
The main objectives of this course are to:						
<ol style="list-style-type: none"> 1. Make the students understand the central dogma of molecular biology 2. Familiarize the students to versatile tools and techniques employed in genetic engineering and recombinant DNA technology. 3. Provide an understanding on the different structural form of biomolecules. 						
Expected Course Outcomes:						
On the successful completion of the course, student will be able to:						
1	Understand the cell cycle and molecules of life in various aspects.					K1
2	Evaluate the changes in the transcription and translation.					K2
3	Describe the different structures of carbohydrate, lipids, nucleotides, DNA and Protein					K3
4	Know the various components and events of Gene expression					K4
5	Design and conduct experiments involving genetic manipulation.					K5
K1 - Remember; K2 - Understand; K3 - Apply; K4 - Analyze; K5 - Evaluate; K6 - Create						
Unit:1	Biomolecules				10 hours	
Introduction to carbohydrates–Functions, classification-Monosaccharides and their derivatives, Disaccharides, Polysaccharides. Proteins – Structure of aminoacids, Different levels of organization–Properties of proteins, Denaturation and renaturation, Classification of proteins, Biologically important proteins. Nucleic acids – Purines, pyrimidines, Nucleosides and Nucleotides, Different structural form of DNA, denaturation and renaturation of DNA, Structure, function and Types of RNA. Lipids-Structure and function of Fatty acids, Triacylglycerols, steroids, lipoproteins and phospholipids. Enzymes – Classification, properties of enzymes, Factors affecting enzyme activity, Michaelis – Menten kinetics, Line-Weaver Burk plot, Eadie Hofstee plot, Mechanism of enzyme action, Enzyme inhibition: Reversible, Irreversible and allosteric inhibition.						
Unit:2	Molecular Biology of the cell				12 hours	
Chromatin organization and packaging; DNA Replication in Prokaryotes and Eukaryotes: enzymes involved, replication fork, extrachromosomal replicons, Homologous and non-homologous recombination, site specific recombination. Transcription in Prokaryotes and Eukaryotes: Transcription factors, transcription machinery, activators and repressors of transcription, RNA polymerases, capping, elongation and termination, RNA processing, RNA editing (splicing, polyadenylation), RNA transport in eukaryotes. Translation in Prokaryotes and Eukaryotes: Ribosome, initiation complex, genetic code, aminoacylation of tRNA, post-translational modification of proteins in eukaryotes.						

Unit:3	Genetic Engineering	12 hours								
Gene cloning Techniques – Cloning Vectors, types, properties; Enzymes in gene cloning - restriction endonucleases, ligases, reverse transcriptase, polymerase, terminal transferases - Homopolymer tailing, linkers and adaptors. Methods of gene transfer: Microinjection, electroporation, gene gun, liposome and viral- mediated delivery, Agrobacterium-mediated delivery. Strategies for selection and screening- marker and reporter genes, positive and negative selection, insertion inactivation, α complementation. Polymerase chain reaction –Primer design tools, Fidelity of thermostable enzymes, Types of PCR and its applications.										
Unit:4	Sequencing and Cloning strategies	12 hours								
DNA sequencing - Sanger's method, Maxam and Gilbert method and Automated method, Construction of genomic and cDNA libraries; Cloning strategies – TA cloning, Gateway cloning, DNA fingerprinting by RFLP and RAPD, Site- directed mutagenesis. Gene silencing techniques – siRNA, microRNA, principles and application, Gene knockouts and Gene Therapy, Genome editing by CRISPR/Cas9 system.										
Unit:5	Cell cycle and control	12 hours								
Phases of Cell Cycle - Cyclin dependent kinases, Mechanisms of Checkpoint regulation; Signal transduction: Intercellular junctions, signaling by hormones and neurotransmitters; Receptors - GPCR, protein kinases and second messengers. Cell-cell interaction; Cell-matrix interaction - Integration of cellular function - pathways of Apoptosis and Autophagy.										
Unit:6	Contemporary Issues	2 hours								
Expert lectures, online seminars - webinars										
Total Lecture hours		60 hours								
Text Book(s)										
1	Lehninger, A. L. 1984. Principles of Biochemistry. CBS publishers and distributors, New Delhi, India.

Course code	13B	ARTIFICIAL INTELLIGENCE AND APPLICATIONS IN BIOLOGICAL SEQUENCE ANALYSIS	L	T	P	C
Core/Elective/Supportive	Core		4	-	-	4
Pre-requisite	Basic Computer and Biology knowledge		Syllabus Version		2021-22	
Course Objectives:						
The main objectives of this course are to:						
<ol style="list-style-type: none"> 1. To understand the various computational techniques with Artificial Intelligence. 2. To analyze biological data with the use of sequence information. 3. To understand the steps involved in Evolutionary analysis. 4. Also helps to start error free sequence analysis investigation successfully. 						
Expected Course Outcomes:						
On the successful completion of the course, student will be able to:						
1	To do the sequence analysis and phylogenetic prediction with their own knowledge.					K3
2	Also capable to search the protein/gene sequence and structural information from the any biological databases.					K2
3	Helps to ensure the comparative sequence analysis without any error.					K5
4	To analyze and interpret the biological data through Artificial Intelligence.					K4
K1 - Remember; K2 - Understand; K3 - Apply; K4 - Analyze; K5 - Evaluate; K6 - Create						
Unit:1	Outline of Bioinformatics and AI				12hours	
Introduction and Applications of Bioinformatics. Classification of biological databases, Biological data formats. Introduction to single letter code of amino acids, Symbols used in nucleotides. Data retrieval from Entrez and SRS. Artificial Intelligence (AI) Introduction: Definition, Challenges and Applications. Role of AI in bioinformatics.						
Unit:2	Wide-ranging of Sequence Alignment				12 hours	
Outline and Uses of sequence alignment. Similar sequence search using FASTA and BLAST programs in the database. Pairwise sequence alignment and Multiple sequence alignment. Local and Global alignment (Smith-Waterman and Needleman-Wunsch algorithm). Substitution matrices, Scoring matrices - PAM, BLOSUM and Dot plot. Statistics of alignment score and evaluation.						
Unit:3	Evolutionary / Phylogenetic Analysis				12 hours	
Overview of Tree analysis. Cladistics, Phenetics and Distances. Various tree types. Overview of Bootstrapping. Tools – Clustal Omega, PHYLIP and Mega. Problems and errors in phylogenetic reconstruction. Overview of AI in Phylogenetic analysis.						
Unit:4	Genome Exploration & Protein Assessment				12 hours	
Gene finding methods. Gene prediction: Analysis and prediction of regulatory regions. Fragment assembly. Genome sequence assembly, Restriction Mapping and Repeat Sequence finder. Primary sequence information. Secondary structure prediction of RNA and Protein. ProtParam, GOR, HNN & Sopma.						

Unit:5	Artificial Intelligence (AI)	10 hours
Practice and implications of AI in Healthcare industry. Algorithms for Bioinformatics prediction: HMM and Neural Network. Case study: AI in computational sequence analysis.		
Unit:6	Contemporary Issues	2 hours
Expert lectures, online seminars - webinars		
Total Lecture hours		60 hours

Course code	13C	PROGRAMMING IN C AND C++	L	T	P	C
Core/Elective/Supportive		Core	4	-	-	4
Pre-requisite		Basic Computer Operating skills	Syllabus Version	2021-22		
Course Objectives:						
The main objectives of this course are to:						
1. To make the students understand the basic aspects of programming.						
2. Develop an in-depth understanding of functional, logic, and object-oriented programming paradigms.						
3. Explain and be able to use fundamental programming constructs such as sequencing, decisions and iteration.						
4. To enhance problem solving and programming skills in C & C++.						
Expected Course Outcomes:						
On the successful completion of the course, student will be able to:						
1	Have a good understanding about the concept of C & C++.					K2
2	Be able to explain and make use of data types, variables, constants, assignment statements, and arithmetic and Boolean expressions in writing programs;					K3
3	Understand object-oriented programming using C++					K2
4	Explain and are able to use arrays and structures;					K4
5	Be able to write and read basic codes in C & C++.					K6
K1 - Remember; K2 - Understand; K3 - Apply; K4 - Analyze; K5 - Evaluate; K6 - Create						
Unit:1	Introduction to Programming Languages				10 hours	
Introduction–Programming languages – Problem solving Technique: Algorithm, Flowchart, Compiling, Testing and Debugging, Documentation – Data structures – Array, Stack, Queue, Linked List concepts.						
Unit:2	Programming in C				12 hours	
C language Introduction – Tokens – Keywords, Identifier, Variables, Constants, Operators – Expression – Data types –Operator precedence – Statement: Input statement, Output statement, Conditional and Unconditional Control Statement – Looping Statement: while, do-while, for –nested loop – Arrays.						
Unit:3	Procedural Concepts in C				12 hours	
C – Procedural Concepts: Structured Programming – Built-in library function – User defined functions – Pointer introduction – Passing pointer in a function – Structure – Union – File handle: Read and Write character from a file.						
Unit:4	Object Oriented Programming and C++				12 hours	
Basic concepts of OOPS– Data hiding–Encapsulation–Inheritance, Polymorphism – Introduction to C++, C vs C++ – data types, variables, constants, operators and statements in C++ – Conditional and looping statements						

Unit:5	Programming and C++	12 hours
C++ classes - Classes & Objects – Functions in C++ – function prototype-definition– Different forms of Constructor – Destructor – Copy constructor – Inheritance –Single, Multiple and Multi level inheritance – Function & operator overloading –inline functions – Friend and virtual functions – Overloaded functions.		
Unit:6	Contemporary Issues	2 hours
Expert lectures, online seminars - webinars		
Total Lecture hours		60 hours

Course code	13D	IMMUNOLOGY & IMMUNOINFORMATICS	L	T	P	C
Core/Elective/Supportive	Core		4	-	-	4
Pre-requisite	Basic knowledge in Biology		Syllabus Version	2021-22		
Course Objectives:						
The main objectives of this course are to:						
<ol style="list-style-type: none"> 1. Make the students understand the immune system, its components and their functions. 2. Provide fundamental knowledge in Immunoinformatics databases and tools. 3. Learn the informatics-based approaches for prediction of Epitopes, design of vaccines and immuno-diagnostic tools. 						
Expected Course Outcomes:						
On the successful completion of the course, student will be able to:						
1	Describe the mechanism of Immune response and antibody production					K1
2	Understand the molecular interactions between antigen and antibody.					K2
3	Interpret the Methods to predict MHC and B-cell epitopes					K3
4	Knowledge on different tools and servers for vaccine designing.					K4
5	Explain the role of the immune molecules in infectious diseases and cancer					K5
K1 - Remember; K2 - Understand; K3 - Apply; K4 - Analyze; K5 - Evaluate; K6 - Create						
Unit:1	Immune system and its types				10 hours	
Innate and Adaptive Immunity: Cell types and processes involved, Anatomical and Physiological Barriers, Inflammation, Soluble molecules and Toll-like receptors, Innate Immune response and their recognition structures, Humoral and Cell mediated responses of immune system. Cells of Immune system: Lymphocytes, Mononuclear phagocytes, Antigen Presenting cells, polymorphs, Natural Killer cells, Granulocytes, Mast cells, Dendritic cells, Cluster designation (CD) and antigen specific receptors. Organs of Immune system: Primary lymphoid organs (Bone marrow and Thymus). Secondary Lymphoid organs (Lymph node, spleen and MALT).						
Unit:2	Immunoglobulins				12 hours	
Immunoglobulins: Structure and function - Clonal selection theory – Ig Classes and subclasses, DR and LDR regions and sequence numbering, Immunogenetics & Immunogenomics, Monoclonal antibodies: Hybridoma technology, applications, Humanization of antibodies by design. Membrane receptors for antigen- B-cell generation and differentiation - T-dependent activation of B cells - Recognition of Antigen by B cells, Neutralizing Antibody. Cytokines: Cytokine receptors and signal transduction mediated by class I and II cytokine receptors. Complement system- activation, pathways and biological effects.						
Unit:3	Immunoinformatics				12 hours	
Databases & tools: IMGT & IEDB, BciPep, Epitome, CED, Ag-Ab database, Allergen Databases, Allergenicity Prediction. Major Histocompatibility Complex: Structure and functions of MHC class I and II, MHC polymorphism, MHC supertypes, MHC peptides-Specificity, characterization, MHCpeptide designing tool. HLA: nomenclature, HLA-peptide interactions, Antigen Processing in the MHC Class I Pathway, Processing of MHC Class II Epitopes, Sequential and Conformational Epitopes, Epitope Prediction algorithms - T cell, B cell epitope prediction tool.						

Unit:4	Vaccine Design and Development	12 hours
<p>Rational vaccine design, Reverse vaccinology, Prediction of immunogenicity - Pipeline & workflows, Toxoid as vaccine, Conjugate vaccine, DNA vaccine, Recombinant vector vaccines, Personalised vaccination. Structure-based Vaccine design - tools and techniques, Antigenicity modification, Epitope replacement, germline targeting, Epitope focussing, hyperglycosylation, chimeric fusion, epitope scaffold, Conformational stabilization, multimeric scaffolding, stabilizing mutations, Antigen display and delivery platforms - multivalent display, co-display, immunomodulation, Genetic delivery.</p>		
Unit:5	Immunoinformatics in Health and Diseases	12 hours
<p>Cancer Immunology: Malignant transformation of cells, Oncogenes and cancer induction, Tumors of immune system, Tumor antigens, Tumor evasion of the immune system, Cancer immunotherapy. Secondary immunodeficiency in AIDS: Mode of infection, causative agent, HIV infection of target cells and activation of Provirus, Immunological abnormalities associated with HIV infection, Discrete Models of HIV Infection, Simulation of HIV-1 Infection. Emerging and Re-emerging Infectious Diseases – Pathogens with antigenic variation, Modifying and Improving Biological Therapeutics, Computational Immunology.</p>		
Unit:6	Contemporary Issues	2 hours
Expert lectures, online seminars - webinars		
Total Lecture hours		60 hours

Course code	13P	PRACTICAL – I WET LAB – MICROBIAL AND PHYTOCHEMICAL TECHNIQUES	L	T	P	C
Core/Elective/Supportive			Core	-	-	4 4
Pre-requisite		Basic wet lab knowledge	Syllabus Version		2021-22	
Course Objectives:						
The main objectives of this course are to:						
4. To understand the isolation of three different microorganisms in a single aspect.						
5. To know the collection of microbes, plants and blood samples.						
6. To make students understand preliminary phytochemical analysis from plant extracts.						
Expected Course Outcomes:						
On the successful completion of the course, student will be able to:						
1	A step by step procedure describes the isolation methods.					K2
2	Skillful in comparison and interpretation of the result with the standard reports.					K5
3	Able to identify the expected compound present or absent in the taken sample.					K2
4	Capable to prepare the Gel and do the staining processes individually.					K6
K1 - Remember; K2 - Understand; K3 - Apply; K4 - Analyze; K5 - Evaluate; K6 – Create						
I	MICROBIOLOGY LAB					30 hours
1. Isolation of bacteria from soil - serial dilution technique						
2. Isolation of fungi from soil - serial dilution technique						
3. Isolation of actinomycetes from soil - serial dilution technique						
4. Screening microbes for antibiotic production						
5. Extraction of proteins from microbes, plant and blood						
6. Separation of protein and molecular weight determination using SDS-PAGE						
7. Staining the gel - CBB and Silver staining						
II	PHYTOCHEMISTRY LAB					28 hours
8. Extraction of secondary metabolites from medicinal plants - Cold percolation method						
9. Extraction of secondary metabolites from medicinal plants - Soxhlet method						
10. Preliminary Phytochemical analysis of plant extracts						
11. Antibiotic bioassay-inhibitory activity (Disc Diffusion)						
12. Tissue culture - callus induction						
13. Tissue culture - cell suspension culture						
III	Contemporary Issues					2 hours
Expert lectures, online seminars – webinars						
Total Lecture hours					60 hours

Course code	1EA	MATHEMATICAL & STATISTICAL APPLICATIONS IN BIOINFORMATICS	L	T	P	C
Core/Elective/Supportive	Core		4	-	-	4
Pre-requisite	Basic knowledge in Mathematics, Statistics and Programming		Syllabus Version		2021-22	
Course Objectives:						
The main objectives of this course are to:						
<ol style="list-style-type: none"> 1. Achieve skills in mathematics to understand and investigate biological processes 2. Help in analyzing vast amount of datasets generated from genome and related projects using mathematical and statistical frameworks 3. Understand and appreciate computational problems in proper perspective. 						
Expected Course Outcomes:						
On the successful completion of the course, student will be able to:						
1	Workout basic mathematical problems in bioinformatics					K2
2	Write R codes and Matlab programs for biological problems					K4
3	Analyse the statistical significance of any biological data					K3
4	Apply the mathematical and statistical knowledge in programming					K5
5	Develop new coding functionalities					K6
K1 - Remember; K2 - Understand; K3 - Apply; K4 - Analyze; K5 - Evaluate; K6 – Create						
Unit:1	Matrices, Determinants and Vectors				12 hours	
Different types of matrices - Matrix Operations - transpose, inverse, and conjugate systems - symmetric and skew symmetric matrices - Diagonalization of Matrices and Characteristic roots - Equality of Matrices - Adjoint of a matrix - Singular and non-singular matrices - Eigen values and Eigen vector – Rank – Determinants - evaluation – Properties - Minors and Cofactors, Multiplication of Determinants, Adjoint, Reciprocal, Symmetric Determinants - Solving Simultaneous equations in three variables using matrices - Solution of a system of linear equations by Cramer’s rule and by matrix inversion method - Cayley – Hamilton theorem without proof - Consistency of linear equations. Vectors - The concept of a Vector, Vector addition and subtraction, Products of two vectors-Dot product and Cross product, Products of three vectors- scalar triple product and vector triple product, Gradient, Divergence and Curl, equation.						
Unit:2	Differential and Integral Calculus				12 hours	
Calculus – Differentiation Standard results – Derivatives of simple functions – Product Rule – Quotient Rule - Partial Differentiation – Partial derivative of simple functions (3 variables case only) - Euler’s Theorem. Integration – Standard results – Integrals of simple functions – Definite Integrals – Indefinite Integrals – Integration by parts – Integration by substitution – Integration by partial fractions.						
Unit:3	Basic Concepts in Statistics				10 hours	
Classification and tabulation of Data - Diagrammatic and graphic Presentation - frequency curve and its characteristics - Introduction to Central Tendency - Frequency Distributions and Statistical Measures (Arithmetic Mean, Median, Mode) - Measures of Dispersion - Methods of Studying Variation, Range, Mean Deviation, Standard Deviation, Variance, coefficient of Variation - Correlation and regression – Introduction - Types of correlation, methods of studying correlation - Coefficient of correlation – Probable error – Regression – Simple linear regression - Principles of least squares, - Relation between regression and correlation - Regression Equations.						

Unit:4	Advanced Topics in Statistics	12 hours
<p>Concept and definitions of Probability - Terms used in probability - Probability of events - axioms of probability - Theorem of probability - Properties of probability - Conditional probability - Baye's theorem, Problem based on Baye's theorem - Random variables: Discrete and continuous random variables, cumulative density function, Probability density and mass functions - Probability distribution- Introduction, binomial distribution, Poisson distribution, Normal distribution - Test of Hypothesis Sampling - Population – Sample – Parameter – Statistic – Standard error - Hypothesis-Null Hypothesis – Alternative Hypothesis – Critical Region – Level of Significance – Errors in Sampling – One tailed and two test statistic-test of significance and its test procedure. Test of significance for small samples: Tests based on normal distribution for Single mean, difference of two means - Tests based on t-distribution for single mean, difference of two means, paired test and observed correlation coefficient – F Test – Parametric and Non parametric tests - Chi-square (χ^2) test for goodness of fit. Analysis of variance: One way and two way classifications - PCA, Factor analysis.</p>		
Unit:5	Programming in R and Matlab	12 hours
<p>How R works - Data sets included in R - Objects –Operators - The data editor – Useful R functions - Graphics with R – Data frames and lists - File operations - Mathematical operations, Basic matrix computation - Basic graphics (high-level plotting, low-level plotting, interacting with graphics) - Statistical analyses with R - Hypothesis testing and data handling: Parametric and nonparametric tests, Chi-square test, t-tests, ANOVA, Correlation and regression, Principal component Analysis – Packages in R - Bioconductor - Loops and vectorization - Expression Set Class, Data annotation, biomaRt, Network analysis - Writing a program in R - Writing own functions -Matlab- key features, basic functionalities - tool box, data types, variables, operators, vectors, matrix operations, Control structures The Matlab interface - Writing in script files - Importing data – Plotting - Using in-built functions - Creating your own functions - Basic programming in Matlab (including for loops) – Case study with biological examples.</p>		
Unit:6	Contemporary Issues	2 hours
<p>Expert lectures, online seminars – webinars</p>		
Total Lecture hours		60 hours
Text Book(s)		
1	S.C.Gupta and V.K. Kapoor, Fundamentals of Mathematical Statistics.

Course code	1EB	BIostatISTICS	L	T	P	C
Core/Elective/Supportive		Elective	4	-	-	4
Pre-requisite	Basic knowledge in Statistics		Syllabus Version	2021-22		
Course Objectives:						
The main objectives of this course are to:						
1. Enable the students to achieve skills in statistics that are essential for applications in bioinformatics.						
2. Introduce basic concepts of probability and statistics.						
3. Understand and appreciate computational problems in proper perspective.						
Expected Course Outcomes:						
On the successful completion of the course, student will be able to:						
1	Understand the basics of Biostatistics and data collection & classification methods					K1
2	Know the types of central tendency and dispersion for different data analysis					K2
3	Understand the concept and methods of Correlation and Regression.					K3
4	Understand the types of Distribution, Hypothesis test and Non parametric test.					K4
5	Apply Statistical frameworks to analyze vast amount of datasets generated from genome and related projects.					K5
K1 - Remember; K2 - Understand; K3 - Apply; K4 - Analyze; K5 - Evaluate; K6 – Create						
Unit:1	Introduction to Statistics and Data collection				12 hours	
Statistics – Definition – Statistical methods – Basic principles – Variables – Measurements, functions– Collection of Data – Primary and Secondary – Types and methods of data collection – Procedure – Merits and Demerits – Classification and tabulation of data – Diagrams and graphs.						
Unit:2	Central Tendency and Dispersion				10 hours	
Measures of Central tendency – Mean, Median, Mode, Geometric Mean – Merits and Demerits – Dispersion and measure of dispersion – Range, Standard deviation, quartile deviation – Merits and Demerits – Co-efficient of variations.						
Unit:3	Correlation and Regression				12 hours	
Skewness and Kurtosis – Correlation – Types and method of correlation – Regression – Simple regression equation fitting – Prediction, similarities and dissimilarities of correlation and regression.						
Unit:4	Distribution and Hypothesis tests				12 hours	
Distribution – Binomial, Poisson, Normal – Statistical inference – Sampling methods – Simple hypothesis testing – Students “t”- test – Chi square test.						
Unit:5	Non Parametric Test				12 hours	
Sign test, Wilcoxon signed rank test, one sample Run Test, Median test, Kruskal Wallis H test, Kolmogorov Smirnov test, Mann Whitney U test.						
Unit:6	Contemporary Issues				2 hours	
Expert lectures, online seminars - webinars						
Total Lecture hours					60 hours	

1	An introduction to Bio-Statistics by N.Gurumani.2009 – MJP Publications.
2	Principles of Biostatistics, Marcello Pagano, Kimberlee Gauvreau, 1993, CRC Press.

Course code	GS02	ADVANCED BIOINFORMATICS		L	T	P	C
Core/Elective/Supportive		Supportive I		2	-	-	2
Pre-requisite		Basic knowledge in Biology		Syllabus Version		2021-22	
Course Objectives:							
The main objectives of this course are to:							
1. Make the students understand the basic aspects and applications of Bioinformatics.							
2. Know the computational methods for Sequence Alignment and the related scoring algorithms.							
3. Understand the steps in Evolutionary analysis.							
Expected Course Outcomes:							
On the successful completion of the course, student will be able to:							
1	Describe the file formats, nomenclature of macromolecules and have an idea of Databases.						K1
2	Interpret the algorithms, scoring functions involved in the sequence alignment.						K2
3	Evaluate the phylogenetic relationship of an organism and identify genes, repeats, domains from sequences using bioinformatics tools.						K3
4	Model 2D and 3D structure of a target from the sequence.						K4
5	Exploit the information in the sequences for further research.						K5
K1 - Remember; K2 - Understand; K3 - Apply; K4 - Analyze; K5 - Evaluate; K6 - Create							
Unit:1	Sequence Alignment					6 hours	
Introduction to sequence alignment, PAM - BLOSUM, Local and Global alignment, Needleman- Wunsch algorithm, Smith-waterman algorithm, Multiple sequence alignment, FASTA, BLAST.							
Unit:2	Phylogenetic Analysis					6 hours	
Evolutionary analysis – steps and construction of Phylogenetic tree- Cladistic, and Phenetic methods- Clustering methods - Rooted and Unrooted tree representation.							
Unit:3	Gene Prediction Analysis					5 hours	
Gene Prediction – methods and tools - similarity based and ab-initio prediction- GENSCAN, GRAIL, FGENES- Protein Domain analysis - Pfam, MOTIF search, SMART.							
Unit:4	Protein structure prediction					5 hours	
Structure prediction methods: Chou-Fasman, GOR method, Neural Network, Threading and Fold recognition, Modeling and Docking.							
Unit:5	Genome Analysis					6 hours	
Genome Projects- Genome sequencing technologies and analysis methods - Analysis of gene expression data - Function, gene set enrichment and pathway analysis.							
Unit:6	Contemporary Issues					2 hours	
Expert lectures, online seminars - webinars							
Total Lecture hours						30 hours

Course code	23A	PERL AND PYTHON PROGRAMMING FOR BIOINFORMATICS	L	T	P	C
Core/Elective/Supportive	Core		4	-	-	4
Pre-requisite	Basic Computer Programming Skills		Syllabus Version	2021-22		
Course Objectives:						
The main objectives of this course are to:						
1. Utilise the UNIX/LINUX environment effectively to perform a range of system-level tasks						
2. Analyse, write and apply shell and Perl scripts to solve bioinformatics problems and form an appropriate skill set						
3. Provide a thorough understanding of the Python and provide an exposure of effective Python programming for biological research						
Expected Course Outcomes:						
On the successful completion of the course, student will be able to:						
1	Understand the interpreter in Perl and Python					K2
2	Apply abstraction, mathematics and/or discipline fundamentals to analysis, design and operation					K3
3	Implement and test solutions					K4
4	Design components, systems and/ or processes to meet required specification					K5
5	Develop Perl and Python modules for bioinformatics applications					K6
K1 - Remember; K2 - Understand; K3 - Apply; K4 - Analyze; K5 - Evaluate; K6 - Create						
Unit:1	UNIX/LINUX Operating System				12 hours	
UNIX - File system - Overview - Text processing - Commands and Operation - UNIX filenames and file protections - working with directories - loops and IF statements - Different File Editors - Mastering the special features of the UNIX system - Advanced Unix commands - Configuring services in Unix - Networking Utilities Introduction to Linux - System Processes - User Management - Types of users, Creating users- Granting Rights - File Quota, File-System Management and Layout - Login Process- Linux shells (bash and tcsh) - Shell Programming Networking on Linux - Printing and print sharing- ftp service, http service.						
Unit:2	PERL Basics				10 hours	
Data types – Operators – variables –Variable Interpolation- Cont–Scalars, Lists, Hashes - Arrays – Array functions – Hash Functions, Using Hashes for the Genetic Code, Gene Expression Data Using Hashes - PERL Subroutines, Modules & Objects - Subroutines - for calculation, Reference to subroutine - Arguments, Passing Data to Subroutines - Passing arrays and hashes to subroutines. Modules - Perl standard modules-Library - Object oriented Perl – Working with objects - Perl and Databases – Perl and DBM						
Unit:3	Advanced Topics in PERL				12 hours	
Pattern-matching - Substitutions, Transliteration, Split and join functions - Quantifiers - File handling concepts - Writing to Files - Opening and Closing a File handle - Directory Manipulation - Common Gateway Interface - CGI.pm Module - Simple CGI programs, Passing Parameters via CGI, Perl and the Web - Perl control statements - PERL programs for Sequences and Strings – Representing Sequence data, store a DNA sequence, concatenating DNA fragments, Transcription. Motifs – Finding motifs, counting nucleotides. Genbank – Files and libraries. Protein Data Bank – files and folders, PDB files. Blast – String matching and homology, blast output files - BioPERL: General Bioperl classes, Sequences (Bio::Seq Class, Sequence Manipulation), Features and Location Classes (Extracting CDS), Alignments						

(AlignIO), Analysis (Blast, Genscan), Databases (Database Classes, Accessing a local Database)		
Unit:4	Introduction to Python	12 hours
Installing Python - Environment Setup - Python interpreter - Identifiers, Keywords and Indentation - Comments - Python Data Types - Python variables - Operators - Lists in Python - operations, methods, parameters – Iterators - Generators, Comprehensions and Expressions - Tuples - Python Dictionaries and Sets - operations and methods		
Unit:5	Advanced Concepts in Python Programming	10 hours
Files - reading and writing files, command line arguments - Exception handling - Modules and Packages - Functions - Control Statements and Regular Expression - string functions and methods - Web Programming with Python - Using Databases in Python - Introduction to Biopython - Sequence objects - Database search using Biopython, Advanced modules in Biopython - Python For Data Analysis - Array Function, Processing, Input and Output		
Unit:6	Contemporary Issues	2 hours
Expert lectures, online seminars - webinars		
Total Lecture hours		60 hours

Course code	23B	MOLECULAR INTERACTIONS	L	T	P	C
Core/Elective/Supportive		Core	4	-	-	4
Pre-requisite	Basic chemistry and Biology knowledge		Syllabus Version	2021-22		
Course Objectives:						
The main objectives of this course are to:						
<ol style="list-style-type: none"> 1. To acquire a thorough and comprehensive understanding of various types of chemical bonding. 2. To impart advanced knowledge on protein Structure, its characteristics property and significance in biological systems. 3. To introduce the concepts on structure of chemical compounds that is considered important in understanding the interaction of biomolecules. 4. To understand the structural and dynamic properties of biomolecules with special emphasis on stereochemistry and conformational analysis. 5. To gain knowledge on principles of spectroscopy for structural elucidation. 6. To understanding the structural properties and energy minimization in protein folding process. 						
Expected Course Outcomes:						
On the successful completion of the course, student will be able to:						
1	Predict and justify the changes in the subcomponents of a biological polymer affect the functionality of the molecule.					K5
2	Define models that illustrate the interactions between biomolecules.					K3
3	Analyze data to identify how molecular interactions affect structure and function of the biological molecules.					K4
K1 - Remember; K2 - Understand; K3 - Apply; K4 - Analyze; K5 - Evaluate; K6 - Create						
Unit:1	Chemical Bonding					10 hours
Introduction and characteristics: ionic bond, covalent bond, coordination bond and hydrogen bond. Factors affecting covalent bond strength. Non-bonded interactions - electrostatic interactions and Van der Waals interactions. Hydrophobic interactions and Hydrophilic interactions. Bond stretching interactions and Metallic bond.						
Unit:2	Theories of Chemical Bonding					12 hours
Valence bond Theory - Sigma bond, Pi bond and Hybridization. Types of interaction between atoms - Bond distance, Bond angle, Torsion Angle, Bond energy and Dipole-Dipole interactions. VSEPR theory - Shape of orbitals and orbital hybridization. Molecular orbital theory and its applications.						
Unit:3	Protein Folding					12 hours
Principles of protein folding. Role of chaperones, folding pathways. Methods to study protein folding - phi, psi & omega angles with distance. Zwitterion, Disulfide Bridge and Ramachandran Plot. Types of Helices, Beta turns, Gamma turns. FSSP, VAST and DALI. Protein Mis-folding and aggregation: Principles and correlation with disease.						
Unit:4	Macromolecular interactions					12 hours
Protein-Protein, Protein-Nucleic acids, Protein-Carbohydrates, Protein-Drug or Small						

molecule interactions. Metalloprotein, Sequence and structure based methods to predict protein-protein interaction. Stereochemistry of proteins and nucleic acids.		
Unit:5	Fundamentals of Spectroscopy	12 hours
Quantum mechanics - Wave properties - Absorption Spectra - Ultraviolet Spectra of Proteins and Nucleic Acids - NMR Spectroscopy - Chemical Shifts - Spin-Spin Splitting - Magnetic Resonance Imaging - Electron Spin Resonance - Circular Dichroism of Proteins and Nucleic acids - Optical Rotatory Dispersion - Infrared Spectroscopy - Raman Spectroscopy - Structure Determination with Vibrational Spectroscopy - Applications.		
Unit:6	Contemporary Issues	2 hours
Expert lectures, online seminars – webinars		
Total Lecture hours		60 hours

Course code	23C	BIOPHYSICS AND CRYSTALLOGRAPHY	L	T	P	C
Core/Elective/Supportive	Core		4	-	-	4
Pre-requisite	Basic knowledge in Physics and Biomolecules		Syllabus Version	2021-22		
Course Objectives:						
The main objectives of this course are to:						
1. Make the students understand the structural and energetic aspects of macromolecular association						
2. Provide knowledge about basic aspects such as crystal and solution structure determination of biomolecules and its applications in crystallography						
3. Utilize different scientific resources for structural and functional analysis of biomolecules						
Expected Course Outcomes:						
On the successful completion of the course, student will be able to:						
1	Describe the Physical and chemical properties of nucleic acids and amino acids and model 2D and 3D structure of a target from the sequence					K1
2	Interpret the model refinement and validation of macromolecular structures					K2
3	Development of new methods for novel structure determination of macromolecules					K3
4	Structure-based designing of new therapeutic molecules for various disease targets					K4
5	Visualize and compare the protein structures using bioinformatics tools					K5
K1 - Remember; K2 - Understand; K3 - Apply; K4 - Analyze; K5 - Evaluate; K6 - Create						
Unit:1	Molecular Biophysics				12 hours	
Conformational parameters of nucleic acids - geometrics - Proteins: Principles of ionization - Predicting properties from amino acid composition - Unusual amino acids, peptides, polypeptides, structural levels of proteins & stabilizing forces, conformational properties of polypeptides, Ramchandran plot, Helical parameters & conformation, organization & interaction angles - Conformational Analysis - Forces that determine protein and nucleic acid structure, basic problems, polypeptide chains geometrics, potential energy calculations, hydrogen bonding, hydrophobic interactions and water structures ionic interactions, disulphide bonds - Statistical thermodynamics and organizational levels of biomacromolecule structure.						
Unit:2	Biophysics of Water				10 hours	
Association of water through H- bonding, Nature of hydrophobic interactions, physicochemical properties of water, State of water in biostructures & its significance - Small-Molecule Solutes: Hydrophiles, Hydrophobes, Large Hydrophobic Solutes and Surfaces, The Influence of Ions: Structure-Making and Structure-Breaking, Long-Range Hydrophobic Interactions Hydrophilic Surfaces - Protein Hydration- Specific Roles of Water in Structure and Function, Secondary Structure, Protein-Protein Interactions, Mediation of Ligand Binding, Functional Tuning, Allostery - Hydrophobic Cavities, Electron Transfer, Involvement of Bound Water in Catalytic Action, Water and Nucleic Acids						
Unit:3	Principles of Thermodynamics				12 hours	
Thermodynamics of solutions - the total free energy of a solution - excluded volume for dilute solutions & flexible polymers - Molecular weight averages and distributions - average dimensions - end-to-end distance - radius of gyration - interaction between polymer segments and solvent molecules - osmotic pressure of protein solutions - membrane potentials – phase equilibria - solubility and freezing point melting points of crystalline polymers - light scattering by macromolecules Zimm plot - estimation of chain dimensions - experimental results on some						

proteins and nucleic acids - Biophysics of the Immune System - Membrane biophysics: Membrane potentials (energetics of transport across membranes), transporters and channels: classification of ion transport - Energetic of transport across membranes theories		
Unit:4	Introduction to Crystallography	12 hours
General concepts, overview of Crystals and their properties - Unit cell, Lattices, Planes and Indices - point groups and space groups. Crystal systems and Symmetry - Braggs' Law and its applications in X-ray diffraction, Atomic scattering factor, Structure factor and Electron density calculations - Fourier series - Fourier Transform and crystal diffraction - Crystallographic statistics – Phase problem - Small molecule and Macromolecular Crystallography - Crystallization methods, X-ray diffraction data collection, structure determination methods - model building and Validation (Ramachandran Plot), molecular dynamics refinement - Structural and Interaction analysis - Synthetic Compounds - Structure determination using SHELXS program - Electron density map calculation - structure refinement - quality indicator: the Rfactor - Validation method Interpretative of results: PROCHECK, - Ramachandran plot - rms deviations - structural analysis, conformations and Interaction analysis Structure – Function relationship of some small molecules – Cambridge Structural Database - Deposition of structures in Databases - - Classification and comparison of protein 3D structures – Structural Databases		
Unit:5	Structure Determination Techniques	12 hours
Molecular replacement method – Isomorphous replacement method - preparing heavy atom derivatives - Anomalous scattering - Multiwave length anomalous dispersion technique - Synchrotron radiation and its implications in structure determination. Introduction to X-ray Free Electron Laser technology (XFEL), importance and applications - Cryo-electron microscopy, Fiber, Powder and Neutron diffraction - NMR- Importance of NMR in Structural Biology, Cryo-EM - Diffusion: Macromolecular diffusion - Ultracentrifugation - density gradient methods - Light Scattering: Experimental results on some proteins and nucleic acids - determination of radius of gyration and end to end distance Electrophoresis -Chromatography: General principles - types - applications to macromolecules Application of X-ray crystallography in drug design		
Unit:6	Contemporary Issues	2 hours
Expert lectures, online seminars - webinars		
Total Lecture hours		60 hours

Course code	23D	PHARMACOGENOMICS AND DRUG DESIGN	L	T	P	C
Core/Elective/Supportive		Core	4	-	-	4
Pre-requisite		Basic knowledge in Biology	Syllabus Version		2021-22	
Course Objectives:						
The main objectives of this course are to:						
<ol style="list-style-type: none"> 1. Provide the basics of pharmacogenomics, Pharmacodynamics, and toxicogenomics 2. Familiarise the students to the stages in drug development. 3. know the concept of drug interactions and drug metabolism in the host 4. Model the target and to use computational tools and software to design a drug. 						
Expected Course Outcomes:						
On the successful completion of the course, student will be able to:						
1	Describe the metabolism of the drug right from administration to excretion and biotransformation.					K1
2	Understand the genes affecting the efficacy of the drugs in the treatment of some important diseases.					K2
3	Relate the traditional medicinal system to the modern scientific results through Ayugenomics; apply modern research tools in the area of Pharmacogenomics.					K3
4	Model and validate the target structures					K4
5	<i>In silico</i> identification of lead molecules through docking.					K5,K6
K1 - Remember; K2 - Understand; K3 - Apply; K4 - Analyze; K5 - Evaluate; K6 - Create						
Unit:1		Introduction to Pharmacogenomics			12 hours	
Introduction to pharmacogenomics, pharmacodynamics, pharmacokinetics, toxicogenomics and ADME properties. Process of drug development-clinical trials phase I, II, III and IV. Route of drug administration. Nature of cell membrane, physiological factors related to drug absorption and drug distribution.						
Unit:2		Drug Metabolism and Ayugenomics			12 hours	
Biotransformation (Metabolism) of drugs and related organic compounds - General pathways, sites of drug biotransformation. Oxidative reactions, reductive reactions, hydrolytic reactions, conjugation reactions, factors affecting drug metabolism and variability in drug response. Ayugenomics (integration of Ayurveda & genomics). Microsatellite in studying genetic variation. Microarray in herbal drug research, Pharmacodynamics, Pharmacogenomics and Pharmacognosy.						
Unit:3		Pharmacogenomics in the Disease Treatment			10 hours	
Pharmacogenomics in the treatment of cancer, neurodegenerative diseases, cardiovascular diseases. Pharmacogenomics in pharmaceutical industry, Ethical issues related to Pharmacogenomics, Pharmacogenomics and ethanopharmacology.						
Unit:4		Ligand Designing			12 hours	
2-D and 3-D database searching, Structure-based and Ligand based drug design for all classes of targets, SPROUT, LUDI. Structure Activity Relationship studies. QSAR studies, 3D QSAR, CoMFA, Verlot Algorithm, Craig Plot, Topliss scheme. Pharmacophore identification and novel drug design. ADME prediction - SwissADME, PreADMET.						

Unit:5	Modeling and Docking	12 hours
Druggable Targets, Macromolecular modeling- Ab initio modeling; Phyre 2 server. Homology Modeling; Modeller. Threading; RAPTOR. Validation of the Model – Ramachandran Plot. PROCHECK. Binding site; Q-Site finder, Catalytic site atlas. Molecular docking; ArgusLab, AutoDock, GLIDE. Drug-receptor interaction. Pymol, Rasmol viewer.		
Unit:6	Contemporary Issues	2 hours
Expert lectures, online seminars - webinars		
Total Lecture hours		60 hours

Course code	2EA	BIODIVERSITY INFORMATICS	L	T	P	C
Core/Elective/Supportive	Elective		4	-	-	4
Pre-requisite	Basic knowledge in Biology		Syllabus Version		2021-22	
Course Objectives:						
The main objectives of this course are to:						
<ul style="list-style-type: none"> <input type="checkbox"/> To make the students understand the basic Biological diversity of life. <input type="checkbox"/> To know the distributed databases and web- accessible resources <input type="checkbox"/> To analyze the software for identification of Assessing existing biodiversity databases <input type="checkbox"/> To understand the probabilistic and deterministic method for analyzing biodiversity data. 						
Expected Course Outcomes:						
On the successful completion of the course, student will be able to:						
1	Describe the role of information technology in distributing biodiversity information.					K1
2	Involve the biodiversity assessments and inventorying programmes.					K2
3	Interpret the morphological and molecular characterization of biodiversity					K3
4	Evaluate the Red data books and Biodiversity registers.					K4
5	Global biodiversity information system					K5
K1 - Remember; K2 - Understand; K3 - Apply; K4 - Analyze; K5 - Evaluate; K6 - Create						
Unit:1	Biological Diversity of Life				10 hours	
Methods for species identification & classification- Information needs in biodiversity assessments and inventorying programmes- Role of information technology in distributing biodiversity information..						
Unit:2	Introduction to Biodiversity Informatics				12 hours	
Assessing, analyzing and documenting biodiversity- Morphological and molecular characterization of biodiversity- Introduction to biodiversity database: endangered animals, endemism and Red data books- Biodiversity registers.						
Unit:3	Network and Databases				12 hours	
Designing information systems to support biodiversity conservation- Networks for distributing information- Distributed Databases and Web- Accessible Resources.						
Unit:4	Software for Biodiversity Informatics				12 hours	
Software for identification of Assessing existing biodiversity databases on the world-wide web- Probabilistic and deterministic identification, Delta, MicroIS, AVIS, ICTV.						
Unit:5	Global Biodiversity Information System				12 hours	
Overview of the UNEP/GEF biodiversity data management project (BDM) – CBD and bioethics– General agreement on trade and traffics.						
Unit:6	Contemporary Issues				2 hours	
Expert lectures, online seminars - webinars						

		Total Lecture hours	60 hours

Course code	2EB	BASICS OF CHEMINFORMATICS	L	T	P	C
Core/Elective/Supportive	Core		4	-	-	4
Pre-requisite	Basic knowledge in Chemistry and Computer Science		Syllabus Version	2021-22		
Course Objectives:						
The main objectives of this course are to:						
<input type="checkbox"/> To make the students understand the basics of cheminformatics and their application. <input type="checkbox"/> To aware the various chemical information sources. <input type="checkbox"/> To analyze the pharmacokinetic properties of small molecules using ADMET calculation. <input type="checkbox"/> To understand the steps in pro drug design. <input type="checkbox"/> To utilize the bioinformatics tools and software in different aspects.						
Expected Course Outcomes:						
On the successful completion of the course, student will be able to:						
1	To make the students understand the basics of cheminformatics and their application.					K1
2	To aware the various chemical information sources.					K2
3	To analyze the pharmacokinetic properties of small molecules using ADMET calculation.					K3
4	To understand the steps in pro drug design.					K4
5	To utilize the bioinformatics tools and software in different aspects.					K5
K1 - Remember; K2 - Understand; K3 - Apply; K4 - Analyze; K5 - Evaluate; K6 - Create						
Unit:1	Basic Mathematics and Statistics				10 hours	
Graph theory and molecular numerology; Logic, sets and functions; Algorithms, integers and matrices; Mathematical reasoning, induction and recursion; Counting; graphs, trees and sets, basic probability and statistics; Markov processes..						
Unit:2	Foundations of Chemistry and Biology				12 hours	
Basic Stereochemistry, Group Theory, Amino acids and Proteins and Properties; pKa, pH and ionization of acids and bases; Protein structure - Primary structure, Secondary structure - helix & sheet; Tertiary structure; Quaternary structure; covalent and non-covalent forces that maintain structures. Physical properties of proteins - charge, size, hydrophobic, protein binding – structural aspects; antibodies; transport; nucleotide binding; catalytic enzymes; basic concepts of combinatorial chemistry. Introduction to drug action, pro drug design and applications.						
Unit:3	Chemical information sources				12 hours	
History of scientific information communication-chemical literature-chemical information-chemical information search-chemical information sources-chemical name and formula searching-analytical chemistry-chemical history-biography-directories and industry sources						
Unit:4	Bioinformatics				12 hours	
Introduction; Experimental sources of biological data; Publicly available databases; Gene expression monitoring; Genomics and Proteomics; Metabolomics; Visualization of sequence data; Visualization of structures using Rasmol or SPDB						

Viewer or CHIME; Genetic basis of disease; Personalized medicine and gene-based diagnostics; Legal, ethical and commercial ramifications of bioinformatics.		
Unit:5	Pharmaceutical applications of molecular modeling	12 hours
Introduction to drugs, structure-based drug design. QSAR and 3D-QSAR Methods. Pharmacophore Design, Ligand-Based Design and De Novo Drug Design Virtual screening/docking of ligands. Protein structure. Drug action enzymes. Drug action receptors. Drug design target interaction. Prediction of Binding Modes, Protein–ligand binding free energies, Fragment-Based Drug Design; Absorption, Distribution, Metabolism, Excretion & Toxicology (ADMET) prediction; Calculation of Physico-Chemical Properties, Biological and Physico-Chemical Predictive Model Building.		
Unit:6	Contemporary Issues	2 hours

Course code	23P	PRACTICAL II - COMPUTER PROGRAMMING	L	T	P	C
Core/Elective/Supportive		Core	-	-	4	4
Pre-requisite		Basic programming knowledge	Syllabus Version		2021-22	
Course Objectives:						
The main objectives of this course are to:						
<ol style="list-style-type: none"> To make the students understand the basic aspects of programming. Practice the use of conditional and looping statements. Gain skills to handle strings and files. Explain and be able to use fundamental programming constructs such as sequencing, decisions and iteration. To program with advanced features of the C, C++ and PERL. 						
Expected Course Outcomes:						
On the successful completion of the course, student will be able to:						
1	Have a good understanding about the concepts of C & PERL.					K2
2	Be able to write and read basic codes in C.					K3
3	Be able to explain and make use of data types, variables, constants, assignment statements, and arithmetic and Boolean expressions in writing programs.					K4
4	Explain and are able to use arrays and structures.					K6
K1 - Remember; K2 - Understand; K3 - Apply; K4 - Analyze; K5 - Evaluate; K6 - Create						
I	Programming in C					30hours
I. Character array manipulations						
<ol style="list-style-type: none"> 1) Read and Display a character array 2) Reverse print the array (String Reverse) 3) Length of the array 4) Copying the contents of one array to another (String Copy) 5) Copy the Uppercase character of one array as Lowercase character to another array 6) Checking whether a string is a palindrome or not 7) Copy the left 'n' characters of one array to another 8) Copy the last 'n' characters of one array to another 9) Copy the middle 'n' characters of one array to another 10) Concatenate two character arrays (String Concatenate) 11) Counting the numbers of Words, Lines and characters in an array 12) Counting the numbers of Uppercase and Lowercase Alphabets, Digits and special characters in an array 13) Check the number of occurrences of a pattern 14) Check the occurrences of a pattern and skip the same 15) Check the occurrences of a pattern and replace it with a different pattern 						
II. Pointers and Character Array						
<ol style="list-style-type: none"> 16) Pattern Counting 17) Pattern Skipping 18) Pattern Replacing 						
III. Files and Command Line Arguments						
<ol style="list-style-type: none"> 19) Read data from the keyboard and write it in the file (char by char) 20) Read data from the file and display it on the screen (char by char) 21) Display the content of all the files(Cat all the files) 22) Copy data from one file to another 23) Pattern Count 						

24) Line in which the pattern occurs with line number	
25) Grep all files (Pattern match all the files)	
II	Programming in PERL
	30 hours
I PERL Basics	
1. Program to print the elements of a array	
2. Program to take an element off the end of an array	
3. Program to take an element off the beginning of an array	
4. Program to put an element at the beginning of an array	
5. Program to put an element at the end of an array	
6. Program to reverse an array	
7. Program to get the length of an array	
8. Program to insert an element at a random position in an array	
II PERL Bioinformatics Programming	
9. Program to store a DNA sequence	
10. Program to concatenate DNA fragments	
11. Program to convert DNA to RNA.	
12. Program to calculate reverse compliment of DNA sequence	
13. Program to read protein sequence data from a file	
14. Program to find motifs in a protein sequence	
15. Program to count nucleotides in a sequence	
16 Program to find the percentage of hydrophobic amino acids in a sequence	
17 Program to find the percentage of G and C in a DNA sequence	
18. Program to append ATGC to a DNA sequence using subroutines	
19. Program to concatenate two strings using subroutines	
20. Program to count the number of given motifs	
21. Program to convert DNAto RNA using subroutines	
22. Program to find if a DNA is stable or not	
	Total Lecture hours
	60 hours

Core/Elective/Supportive		Supportive	2	-	-	2
Pre-requisite		Basic knowledge in Biology	Syllabus Version		2021-22	
Course Objectives:						
The main objectives of this course are to:						
<ol style="list-style-type: none"> 1. Model the protein target and use computational tools and software to design a drug. 2. Acquire knowledge on the computational softwares to visualize and analyze the structure and sequences. 3. Analyze the conformational properties of protein using Ramachandran plot. 						
Expected Course Outcomes:						
On the successful completion of the course, student will be able to:						
1	Perform molecular docking with ligands					K2
2	Model and validate the target structures and identification of lead molecules through docking.					K3
3	Evaluate the ligand binding and interaction with the target using bioinformatics tools.					K4
4	Analyze the conformational properties of protein using Ramachandran plot.					K5
K1 - Remember; K2 - Understand; K3 - Apply; K4 - Analyze; K5 - Evaluate; K6 – Create						
Unit:1 Introduction to Drug Discovery 6 hours						
History of drug design, Drug properties, likeness; Principles of Protein structure - Helix, Sheet, Strand, Loop and Coil, Torsion angles, Active site, Domains, Fold, Motif, PSSM; Structural databases- PDB, CATH, SCOP; Chemical Databases – ZINC, Pubchem, Chembl..						
Unit:2 Macromolecular modeling 6 hours						
Ab initio modeling; Homology Modeling; Threading; Fold Recognition. Model refinement and validation – Ramachandran Plot, PROCHECK. Prediction of Binding site; ADME prediction; Rasmol viewer.						
Unit:3 Quantitative Structure Activity Relationship (QSAR) 6 hours						
SAR, QSAR, Types of physicochemical parameters, experimental and theoretical approaches for the determination of physicochemical parameters. 3D-QSAR software COMFA.						
Unit:4 Molecular docking and Virtual screening 5 hours						
Structure-based drug design and Ligand based drug design; Virtual Screening, Pharmacophore design and identification. Molecular docking- AutoDock, Drug-receptor interaction.						
Unit:5 Molecular Mechanics and Dynamics 5 hours						
General features of molecular mechanics; Energy Minimization - local and global energy minima, applications. Molecular dynamics simulation.						
Unit:6 Contemporary Issues 2 hours						
Expert lectures, online seminars – webinars						
Total Lecture hours					30 hours

Course code	33A	GENOMICS AND NGS	L	T	P	C
Core/Elective/Supportive		Core	4	-	-	4
Pre-requisite	Basic Bioinformatics knowledge		Syllabus Version	2021-22		
Course Objectives:						
The main objectives of this course are to:						
<ol style="list-style-type: none"> 1. To understand the genome architecture with gene function and regulation. 2. To provide students with the skills of genomic data analysis. 3. To get clear idea about the Computational transcriptomics and epigenomics part. 4. To provide general and unique aspects of Next Generation Sequencing (NGS) through various tools. 5. To understand the basics and applications of big data. 						
Expected Course Outcomes:						
On the successful completion of the course, student will be able to:						
1	Explain genomic technologies and the ways in which genomic data are stored.					K2
2	Have hands-on experience on various bioinformatics tools available for analyzing genes and genomes.					K3
3	To handle biological big data generated by the sequencing projects and its analysis.					K4
4	Adequate awareness on plant and clinical transcriptomics and epigenomics evaluation.					K5
5	Get the clear idea in theories of various NGS technologies.					K1
K1 - Remember; K2 - Understand; K3 - Apply; K4 - Analyze; K5 - Evaluate; K6 – Create						
Unit:1	Genome Organization					10hours
Anatomy of the Eukaryotic and Prokaryotic Genome, Repetitive DNA Content of Genomes. Gene-protein relations, Mutational sites Complementation. Genome Mapping – Mapping Genomes, Genetic and Physical Maps, Sequencing Genomes, Methodology for DNA Sequencing, Assembly of a Contiguous DNA Sequence, understanding a Genome Sequence, Locating the Genes in a Genome Sequence, Determining the Functions of Individual Genes.						
Unit:2	Genome Analysis, Gene Prediction & Genome Rearrangement					12 hours
DNA Sequencing databases, Sequence analysis programs. The first complete genome sequence and database. DNA sequencing, sequencing cDNA Libraries of expressed genes, Accuracy and computers storage of sequence, Conversions of one sequence format to others. ORF Prediction, gene prediction methods and tools. Analyzing Genomes, Applications to Complex Genomes. Comparative Genomics – Completed genomes, Sequence assembly and gene identification, functional classification of genes.						
Unit:3	Transcriptomics and Epigenomics					12 hours
Transcriptomics: Introduction and Importance, Data collection and processing. Applications and Candidate genes. Significance of Transcriptomics. Different types of RNA transcripts and, Single-cell transcriptomics. Epigenomics: What is epigenomics?Challenges and opportunities of computational epigenomics. Introduction of plant epigenomics. Clinical Applications of Epigenomics.						
Unit:4	Introduction to Next Generation Sequencing					12 hours
What is Next Generation Sequencing? How it is different from traditional sequencing/Microarrays? Various NGS technologies/platforms. Experiment types and						

applications. Workflows for various NGS experiments (variant discovery and expression profiling). Algorithms and tools for NGS read alignment, SNP calling. Various file formats - SAM, VCF, BED, WIG, and PILEUP. DNaseq genetic variations. NGS and personal genome sequencing. Whole genome sequencing. Target sequencing. Sequencing Mappability. Refined alignment. Base quality Recalibration. Variants identification. Four different workflows for mutation discovery (CrossBow, Bowtie, BWA, MAQ).		
Unit:5	NGS related Theories with Experiments and Big Data	12 hours
<p>RNAseq - Biological theories on RNAseq experiments. Major scientific advance using RNAseq. Alignment - Gene expression analysis, Differential expression analysis. Alternative splicing - TopHat and Cufflinks for RNAseq.</p> <p>ChIPseq - Introduction and biological theories on ChIPseq analysis. DNA fragment evaluation. Peak identification. Two condition comparison. Saturation analysis. Motif finding and related theories.</p> <p>Big Data- Overview and its Applications in genomics. Platforms for Big Data. Utilization in Biological Industry.</p>

Course code	33B	PROTEOMICS		L	T	P	C
Core/Elective/Supportive			Core	4	-	-	4
Pre-requisite	Basic knowledge in Biology			Syllabus Version	2021-22		
Course Objectives:							
The main objectives of this course are to:							
1. Understand the structure of cellular proteins and methods for structure prediction.							
2. Analyze the methodology of MALDI-TOF analyzers and perform functional proteome analysis.							
3. Predict the protein secondary structure using different algorithm.							
Expected Course Outcomes:							
On the successful completion of the course, student will be able to:							
1	Describe the different secondary structure of protein.						K1
2	Interpret the properties of protein in solution and in membranes.						K2
3	Evaluate the variability between organ and developmental stage.						K5
4	Identify the immobilized pH gradient and describe the digital imaging, Spot detection and quantification.						K3
5	Perform functional proteome analysis						K4
K1 - Remember; K2 - Understand; K3 - Apply; K4 - Analyze; K5 - Evaluate; K6 – Create							
Unit:1	Protein classification					10 hours	
Structural elements and terminology: Helix, Sheet, Strand, Loop and coil, Active site, Architecture, Blocks, Class and Domains, Fold, Motif, PSSM. Principles of classification: Based on structural features, Phylogenetic relationship. Properties of protein in solution and in membranes. Interaction with other molecules like lipids, carbohydrates, metal Ions.							
Unit:2	Protein structure prediction					12 hours	
Use of sequence pattern, leucine zipper, coiled coil, transmembrane, signal peptide, cleavage site. Secondary structure prediction: Chou – Fasman / GOR method, Neural network, nearest neighbor method, tertiary structure prediction, threading profile, contact potential, modeling.							
Unit:3	Bioanalysis of protein and peptides					12 hours	
Complex protein and peptide mixtures, Extracting proteins from biological samples, Protein separation before digestion: 1D and 2 D Electrophoresis, Immobilized pH gradient, Sample preparation, First dimension criteria, second dimension criteria, Stabilization, Detecting protein on gel: Electro blot, Image analysis, Digital imaging, Spot detection and quantification, Gel matching. Data Analysis – Database for 2D gel.							
Unit:4	Tool of Proteomics					12 hours	
Mass Spectrometry for protein and peptide analysis: MALDI-TOF Analyzers, ESI Tandem MS instrument, Tandem Mass Analyzers, The Triple Quadrupole Mass Analyzer, The Ion Trap Mass Analyzer, Q-TOF & Fourier Transform–Ion Cyclotron Resonance, MS Instrument.							
Unit:5	Functional Proteome Analysis					12 hours	
Integrated Proteome Analysis - Phage antibody as tool, Protein expression analysis, High throughput analysis for proteomics. Automation of proteomic analysis. Proteomics in plant							

breeding: Objectives, principles and methods, Genetic diversity analysis, Distribution of varieties, lines and cultivars, Mutant characteristics, Variability between organ and developmental stage, Identification of abiotic stress, Genetic mapping of protein markers.		
Unit:6	Contemporary Issues	2 hours
Expert lectures, online seminars – webinars		
Total Lecture hours		60 hours
Text Book(s)		
1	Introduction to Proteomics: Principles and Applications, Nawin C. Mishra, 2011, Wiley Publishers

Course code	33C	VISUAL BASIC.NET WITH RDBMS	L	T	P	C
Core/Elective/Supportive		Core	4	-	-	4
Pre-requisite		Basic Computer Programming Skills	Syllabus Version		2021-2022	
Course Objectives:						
The main objectives of this course are to:						
1. To gain knowledge on relational data and its management						
2. To design Logical Database Schema and Mapping it to implementation level schema through Database Language Features.						
3. To provide knowledge of incorporating SQL/ PL/SQL with programming languages						
4. To understand the practical problems of Concurrency control and its solutions Gain knowledge about failure and Recovery mechanisms						
5. To inculcate knowledge on RDBMS concepts and Programming with Visual Basic.NET						
Expected Course Outcomes:						
On the successful completion of the course, student will be able to:						
1	To analyze Relational Data Base design methodology.					K4
2	Acquire knowledge in fundamentals of Relational Data Base Management System.					K2
3	Able to handle different Data Base languages.					K3
4	Be able to effectively develop applications with full functionality and a graphical user interface using the language Visual Basic.NET.					K3
5	Create database applications by connecting VB.NET with databases					K6
K1 - Remember; K2 - Understand; K3 - Apply; K4 - Analyze; K5 - Evaluate; K6 – Create						
Unit:1		Introduction			10 hours	
Data Abstraction, Schemas and & Instances- Data Models: Data modeling using Entity Relationship (ER) Model -entity and entity sets, relations and relationship sets, E-R diagrams - Reductions of ER Schema to Tables - Overview of the QBE Language-Hierarchical and Network Model Relational Model- Object Oriented Model - Introduction to distributed database processing.						
Unit:2		Recovery and Security			12 hours	
Database Recovery Techniques - Database Security - Distributed databases and Client-Server Architecture - Concepts for Object Database - Enhanced Data Models for Advanced Application Emerging Database Technologies and Application						
Unit:3		Database Languages			12 hours	
Data definition languages – Data Manipulation language, Data Control language, Data and String Functions, Union and intersect operator, Sub queries, Normal Form – 1NF, 2NF, 3NF & Boyce-Codd NF, Introduction to PL/SQL - Basics concepts of SQL and SQL commands - Nested Queries- Aggregate Functions- Null Values - PL/SQL interface - Data types in SQL, Simple PL/SQL programs.						
Unit:4		Visual Basic.NET			12 hours	
Introduction to VB.NET, Understanding the development Environment – IDE Components-Data Types – Variables – Conditional and Looping Statements – Modular Coding – Subroutines – Functions – Argument-Passing. - Application development using VB.NET						

framework- Working with Forms-Components, Controls and Their Properties, Methods and Events.		
Unit:5	Working with ADO.NET and database connectivity	12 hours
ADO.NET: overview - Architecture - DataSet - DataGrid Control- File I/O Operations Introduction to database connectivity: Data Access with ADO.NET-Binding Controls to Databases- Handling Databases in Code.		
Unit:6	Contemporary Issues	4 hours
Expert lectures, online seminars – webinars		
Total Lecture hours		60 hours
Text Book(s)		
1	Database System Concepts. Silberschatz, Tata McGraw-Hill Publications.	
2	Database system organization. J.M.Martin, Princeton-Hall.

Course code	33D	MOLECULAR MODELING	L	T	P	C
Core/Elective/Supportive	Core		4	-	-	4
Pre-requisite	Basics of Chemistry and Biology		Syllabus Version	2021-22		
Course Objectives:						
The main objectives of this course are to:						
<ol style="list-style-type: none"> 1. Provide knowledge about the structure of the protein molecule and modeling 2. Make a deep understanding about the electron atom types and biomolecular properties 3. Create a strong view on force field and interactions of molecular assemblies 						
Expected Course Outcomes:						
On the successful completion of the course, student will be able to:						
1	Understand the molecular structure and its functional importance					K1
2	Clear view on computations quantum mechanics and methods for calculating molecular properties					K2
3	Understand the Physical properties of macromolecular structure and broader concept of energy minimization and its applications					K3
4	Protein structural stability, atoms movement in a molecule by Molecular Dynamics					K4
5	Develop innovative ideologies with optimal solutions					K6
K1 - Remember; K2 - Understand; K3 - Apply; K4 - Analyze; K5 - Evaluate; K6 – Create						
Unit:1	Molecules and Its Properties				10 hours	
Introduction - Nomenclature, terms and atom-numbering used in molecular modelling - Model-building and calculations - Molecular geometry and conformation - Steric criteria - Molecular Representations and Search connectivity matrix - Molecular Graphics surfaces – Applications of Molecular Graphics - Co-ordinate system, Potential energy surfaces, Applications of molecular modelling – Protein-Ligand Interactions, Protein-Protein Interactions, Virtual Screening, Pharmacophore modelling, Ligand based and structure based virtual screening/ drug design, Fragment based approaches						
Unit:2	Quantum Mechanics				12 hours	
Quantum chemistry for Modeling of small molecules - Variation method and Time independent Perturbation theory - Computational quantum mechanics - Wave properties - Schrodinger equation - Born Oppenheimer approximation - Hartree fock approximation - One electron atoms, poly electronic atoms and molecules - Molecular orbital calculations - Basic sets - Molecular orbital theory, Huckel theory - Types of quantum mechanics - Electron correlation - Energy component analysis - Density functional theory - Fragment molecular orbital method						
Unit:3	Molecular Mechanics				12 hours	
General features of MM force field - Free energy calculations - Potentials of mean force - Molecular surface area and solvent accessible surface area - Solvation models - Non-bonded interactions and types - Types of potentials and their functions - Calculating thermodynamic property using force field - Derivatives of molecular mechanic energy function - Force field parametrisation and transferability - Calculations of molecular mechanics parameter involves amino acids and DNA base pair - Calculate property for molecular mechanics trajectories – Tools						

Unit:4	Energy Minimization	12 hours
Introduction - Non-derivation minimization, Derivative minimization method - First order minimization method – Steepest Descent Method, Conjugate Gradients - Second order method – Newton – Raphson, Block Diagonal Newton - Raphson, Quasi- Newton Method, The Fletcher- Powell Algorithm, Choice of method - Global conformational minima determination - approaches and problems - Bioactive vs. global minimum conformations - Applications of energy minimization. Determination of transition structure and reaction pathways - Geometry Optimization Procedures – Tools		
Unit:5	Molecular Dynamics	12 hours
Introduction - Molecular dynamics using simple methods, Newtonian dynamics - Continuous potentials - Setting and running a molecular dynamics simulations; Implicit and explicit Solvation models, Periodic boundary conditions, Time dependent properties - Molecular dynamics at constant temperature and pressure - Trajectory quality, Initial system setting simulation protocol high speed implementation - Numerical integration - Computational complexity - Verlet algorithm, MD Ensembles – types - Monte Carlo simulation methods - Simulated annealing		
Unit:6	Contemporary Issues	2 hours
Expert lectures, online seminars – webinars		
	Total Lecture hours	60 hours

Course code	3EA	SYSTEMS BIOLOGY	L	T	P	C
Core/Elective/Supportive		Core	4	-	-	4
Pre-requisite	Basic knowledge in Biology and Computers		Syllabus Version	2021-22		
Course Objectives:						
The main objectives of this course are to:						
To make the students understand the basic aspects and applications of Systems Biology.						
<ul style="list-style-type: none"> • To know the micro array analysis, hierarchical clustering, and self-organizing maps. • To analyze the virtual erythrocytes and the levels of simulation. • To understand the steps in yeast two hybrid system and peptide mass fingerprinting. • To utilize the information from various pathway database for further research. 						
Expected Course Outcomes:						
On the successful completion of the course, student will be able to:						
1	Describe the microarray technique and analyze the result in various aspects					K1
2	Interpret the various metabolic pathways.					K2
3	Reorganize the pattern using neural network method.					K3
4	Understand the concept of Quantification of receptor signaling.					K4
5	Know about primer design and epitope identification					K5
K1 - Remember; K2 - Understand; K3 - Apply; K4 - Analyze; K5 - Evaluate; K6 - Create						
Unit:1						
Introduction to Systems Biology			10 hours			
<i>What is Systems Biology? Integrating Networks. Methods of study: Micro array – definition, types of array, Micro array analysis: Hierarchical clustering, Self-organizing maps. Applications of Micro Array in systems biology.</i>						
Unit:2						
Metabolomics			12 hours			
Digestion of proteins and protein metabolism, Urea Cycle, Transport metabolism, Carbohydrate metabolism – metabolism of glucose – glycolysis, TCA cycle, glycogenesis, Pentose phosphate shunt, Electron transport. Lipid metabolism: beta oxidation. Interconnection of pathways, metabolic regulations. Interconnection of pathways, metabolic regulation, Phylogeny, RNA secondary Structure, Gene Prediction						
Unit:3						
Computational Cell Biology			12 hours			
Principle and levels of simulation – Virtual Erythrocytes, Pathological analysis. Flux Balance Analysis; Graphical Biological Network Editor and Simulator (Cell Designer).						
Unit:4						
Location Proteomics			12 hours			
Protein subcellular location- Pattern Recognition. Predicting ligand-binding function, Use of gene cluster, detecting protein – protein interaction. Methods for Protein-Protein Interaction Analysis- Yeast Two Hybrid System (Y2H); Peptide Mass Fingerprinting (PMF).						
Unit:5						
Creative Bioinformatics			12 hours			
Novel use for database. Use of EST database – Unigene, gene discovery, Primer						

design, Restriction mapping, Position specific cloning, KEGG, SNP database, Target identification, Epitope identification. Spatial Signaling Dynamics – Methods and Quantification of receptor signaling.		
Unit:6	Contemporary Issues	2 hours

Course code	3EB	BIG DATA ANALYTICS	L	T	P	C
Core/Elective/Supportive		Elective	4	-	-	4
Pre-requisite	Programming and Database Management Knowledge		Syllabus Version		2021-22	
Course Objectives:						
The main objectives of this course are to:						
1. Able to select and implement appropriate data structures to solve big data problems and also write Map and Reduce codes for distributed processing of data.						
2. Interested students will also have an opportunity to learn the basics of functional programming in Scala.						
3. Capable to perform batch processing operations on Big data on your own computer as well as on an Amazon EC2 instance.						
Expected Course Outcomes:						
On the successful completion of the course, student will be able to:						
1	Competent to retrieve and store data in HDFS & Hbase using MapReduce & Apache Pig.					K3
2	Learn to choose and use tools to ingest structured and unstructured data into big data processing systems and use Hive to perform data transformations.					K3
3	Process Big Data on Cloud using Amazon EMR and use OOZIE for managing your workflow.					K2
4	Gifted to build real time data processing systems using Apache Storm and Apache Spark.					K6
5	Talented to perform analytics on the big data using Spark MLLib and get knowledge of tools to visualize results.					K5
K1 - Remember; K2 - Understand; K3 - Apply; K4 - Analyze; K5 - Evaluate; K6 – Create						
Unit:1		Basics of Big Data			10 hours	
Introduction to Big Data and its Applications. Linear data structures and Non-linear data structures. Algorithm design.						
Unit:2		Environment and Databases			12 hours	
Distributed Computing Environment for Big Data. NoSQL databases for Big Data Storage Applications (HBase). Distributed Processing of data using MapReduce & Pig. In-memory distributed processing using Apache Spark. Data Storage on Cloud (Amazon S3 & Dynamo DB).						
Unit:3		Concepts and Platforms			12 hours	
Performing operations. Concepts for Big Data. Big Data Platforms. Workflow management. Batch Processing.						
Unit:4		Applications and Source			12 hours	
Applications of Streaming Data in Industry. Sourcing Streaming data using Apache Flume. Building real-time data pipeline using Apache Storm. Streaming on Apache Spark.						
Unit:5		Advances in Big Data			12 hours	
Regression, Clustering & Classification using Spark MLLib. Building visualizations using Big Data. Case studies on applications of Big Data Analytics in biology.						

Unit:6	Contemporary Issues	2 hours
Expert lectures, online seminars – webinars		
Total Lecture hours		60 hours

Course code	GS02	ADVANCED BIOINFORMATICS	L	T	P	C
Core/Elective/Supportive		Supportive	-	-	2	2
Pre-requisite		Basic knowledge in Biology	Syllabus Version		2021-22	
Course Objectives:						
The main objectives of this course are to:						
<ol style="list-style-type: none"> 1. Make the students understand the basic aspects and applications of Bioinformatics. 2. Know the computational methods for Sequence Alignment and the related scoring algorithms. 3. Understand the steps in Evolutionary analysis. 						
Expected Course Outcomes:						
On the successful completion of the course, student will be able to:						
1	Describe the file formats, nomenclature of macromolecules and have an idea of Databases.					K1
2	Interpret the algorithms, scoring functions involved in the sequence alignment.					K2
3	Evaluate the phylogenetic relationship of an organism and identify genes, repeats, domains from sequences using bioinformatics tools.					K3
4	Model 2D and 3D structure of a target from the sequence.					K4
5	Exploit the information in the sequences for further research.					K5
K1 - Remember; K2 - Understand; K3 - Apply; K4 - Analyze; K5 - Evaluate; K6 – Create						
Unit:1						
Sequence Alignment					6 hours	
Introduction to sequence alignment, PAM - BLOSUM, Local and Global alignment, Needleman- Wunsch algorithm, Smith-waterman algorithm, Multiple sequence alignment, FASTA, BLAST.						
Unit:2						
Phylogenetic Analysis					6 hours	
Evolutionary analysis – steps and construction of Phylogenetic tree- Cladistic, and Phenetic methods- Clustering methods - Rooted and Unrooted tree representation.						
Unit:3						
Gene Prediction Analysis					5 hours	
Gene Prediction – methods and tools - similarity based and ab-initio prediction- GENSCAN, GRAIL, FGENES- Protein Domain analysis - Pfam, MOTIF search, SMART.						
Unit:4						
Protein structure prediction					5 hours	
Structure prediction methods: Chou-Fasman, GOR method, Neural Network, Threading and Fold recognition, Modeling and Docking.						
Unit:5						
Genome Analysis					6 hours	
Genome Projects- Genome sequencing technologies and analysis methods - Analysis of gene expression data - Function, gene set enrichment and pathway analysis.						
Unit:6						
Contemporary Issues					2 hours	
Expert lectures, online seminars – webinars						
Total Lecture hours					30 hours

Core/Elective/Supportive		Core		0	0	4	4
Pre-requisite		Basic Wet lab knowledge		Syllabus Version		2021-22	
Course Objectives:							
The main objectives of this course are to:							
<ol style="list-style-type: none"> 1. Provide hands on training in the basic techniques that is essential for genetic engineering and recombinant DNA technology. 2. Develop their skills in the isolation, identification and quantification of macromolecules. 3. Experience in the handling of macromolecules (DNA and RNA). 							
Expected Course Outcomes:							
On the successful completion of the course, student will be able to:							
1	Have technical expertise on versatile techniques in Recombinant DNA technology.					K2	
2	Perform various types of practical laboratory work (chemical, biochemical and molecular methods) in a safe way					K3	
3	Analyse, interpret and present the results with theoretical background					K4	
4	Have hands-on experience on various basic biotechnological techniques for analyzing biomolecules.					K5	
K1 - Remember; K2 - Understand; K3 - Apply; K4 - Analyze; K5 - Evaluate; K6 – Create							
				Experiments		60 hours	
<ol style="list-style-type: none"> 1. Sterilization techniques and Media preparation 2. Preparation and Maintenance of Microbial Culture 3. Plasmid and Chromosomal DNA Preparation from E. coli 4. Pure microbial culture techniques 5. pH measurements and preparation of buffers 6. Spectrophotometric Analysis of DNA 7. Agarose Gel Electrophoretic Analysis of DNA 8. Restriction digestion of bacterial genomic DNA and plasmid DNA 9. Ligation of DNA fragment with plasmid DNA 10. Animal Genomic DNA isolation 11. Plant Genomic DNA isolation 12. Amplification of DNA by PCR 13. Maintenance of Cell lines 14. Cell Viability assay 15. BCA Protein assay

4.	JO4	Web Designing	30	4

Job Oriented Certificate Course

Course code	JO1	BIOINFORMATICS ALGORITHMS AND MACHINE LEARNING	L	T	P	C
Core/Elective/Supportive		Certificate course	4	-	-	4
Pre-requisite		Basic computer and statistics knowledge	Syllabus Version		2021-22	
Course Objectives:						
The main objectives of this course are to:						
<ol style="list-style-type: none"> 1. Understand any typical algorithm design problem for efficiently implementing the algorithm 2. Provide an overview on the main approaches of machine learning. 3. Apply various clustering and classification algorithms for bioinformatics problems. 						
Unit:1	Introduction to Algorithms					5 hours
Biological algorithms versus computer algorithms - The 'Change Big-O Notations – Algorithm design techniques and the different types of algorithms - Molecular Biology Primer - Exhaustive Search: Mapping Algorithms – Motif Finding problem - Search Trees - Finding a Median String.						
Unit:2	Alignment algorithms					5 hours
Greedy Algorithms: Genome Rearrangements - A Greedy Approach to Motif Finding - DNA Sequence comparison - Manhattan Tourist Problem - Edit Distance and Alignments - Global Sequence Alignment - Scoring Alignment - Local Sequence Alignment - - Multiple Alignment.						
Unit:3						6 hours
Algorithms and Complexity- Clustering And Trees- Hierarchical clustering-k-means clustering - Evolutionary Trees - Distance-based tree reconstruction - Character-based tree reconstruction - Small and large Parsimony Problem - Hidden Markov Models						
Unit:4	Machine Learning					6 hours
Introduction of machine learning - Basic concept of machine learning - Supervised learning - Semi-supervised learning - Unsupervised learning - Machine Learning Techniques - Introduction to Support Vector Machines and their applications.						
Unit:5	Neural Networks					6 hours
Introduction to Neural Networks - Applications of ANN, SVM etc. Basic structure for deep learning models - Training of deep learning models - Applications of deep learning in structural bioinformatics						
Unit:6	Contemporary Issues					2 hours
Expert lectures, online seminars – webinars						
Total Lecture hours					30 hours

Course Designed By: Dr. S. Usha						

Course code	JO2	IT TOOLS AND APPLICATIONS	L	T	P	C
Core/Elective/Supportive	Certificate course		4	-	-	4
Pre-requisite	Basic computer knowledge		Syllabus Version		2021-22	
Course Objectives:						
The main objectives of this course are to:						
<ol style="list-style-type: none"> 1. Understand the concept of Information Technology 2. Learn the functioning of computer Software and hardware 3. Gain experience in the basic operations of computer 						
Unit:1	Introduction to Computers		5 hours			
Hardware & Software , Characteristics - Application of computer / information technology - Parts of a computer: Input unit – Output – Storage – CPU - Functioning of Computer/ Computer Operation: Instruction set - main memory organization, I/O buses - BIOS, booting, Instruction Cycle - memory interleaving, Virtual Memory.						
Unit:2	Computer Arithmetic		5 hours			
Information, Data and its logical & physical concept - Coding system- What is the need for coding? BCD, EBCDIC, ASCII code, Unicode - Computer Arithmetic - Number systems, binary, Octal, Hexadecimal, Binary Addition, Subtraction and Multiplication. Binary, decimal, hexadecimal number system conversion - Introduction to logic gates & circuits and Boolean algebra.						
Unit:3	Software		6 hours			
Relationship between hardware and software, need for S/w, system & application & free domain - S/W, Embedded Software - Computer Language - Different generations of languages, High Level Language and Low Level Language, name of some computer languages, compiler, interpreter. Testing and Debugging. - Application Software and its types - Word-processing, Spreadsheet, Presentation Graphics, Data Base Management Software, characteristics and Uses - Virus, Types of viruses, virus detection and prevention - Some file formats - Operating System-Functions of the Operating system - Overview of different operating systems- DOS ,windows, Linux.						
Unit:4	Communication Technology		6 hours			
Concept of Analog and Digital Signal - Communication types - Duplex - Network components - Bridges, HUB, Routers, Repeater and Gateways - Transmission techniques - wired & wireless - Transmission Media – Bandwidth - Transmission Impairments - Encoding/ Decoding.						
Unit:5	Computer Networks		6 hours			
Type of Networks, Network configuration- Network protocols Internet: Introduction to Internet, requirements, applications and Protocol - WWW, web page, web site, web browsers, HTTP, e-mail, Search engine, Domain name.						
Unit:6	Contemporary Issues		2 hours			
Expert lectures, online seminars – webinars						
					Total Lecture hours	30 hours

3	Operating System Concepts, Sixth Edition : Abraham Silberschatz, Peter Baer Galvin, Greg Gagne, 2019					
4	Data and Computer Communications”, eighth Edition, William Stallings, 2007					
Course Designed By:			Dr. N. Jeyakumar			

Course code	JO3	MICROBIAL GENOMICS	L	T	P	C
Core/Elective/Supportive	Certificate course		4	-	-	4
Pre-requisite	Basic knowledge in Biology		Syllabus Version		2021-22	
Course Objectives:						
The main objectives of this course are to:						
<ol style="list-style-type: none"> 1. Provide knowledge about the normal microbial flora and interactions. 2. Understand the methods to clone, propagate and maintain metagenomic libraries 3. Study the functioning of microbial communities using metagenomic approaches. 						
Unit:1	Microbes and Environment		5 hours			
Diversity of Microorganisms, Comparison of three domains – Bacteria, Protista, Fungi, Viral and Algae diversity, Microbial habitats, Metagenomics, Microbe-microbe interactions, Microbe-host interactions, Microbial communities- Biofilms, Quorum sensing, Bioremediation.						
Unit:2	Microbial Identification and Characterization		5 hours			
Bacterial genome characterisation and dynamics- Sequence alignments to Phylogenetic relationships- Prediction of Genes in prokaryotic genomes- Prediction of Operons, Regulons, transcription signals and Biological pathways- Detection of Viruses using NGS - Reverse vaccinology: from genome to vaccine, Microbial genomics for antibiotic target discovery.						
Unit:3	Microbial Genome Sequencing and Characterization		6 hours			
Genome sequence analysis- Sequence assembly, Annotation of genomes from sequence to functional annotation, Atlas visualisation of genome-wide information - Comparative genomics and metagenomics- Genome-wide gene expression analyses- Representational display analysis of genome comparisons - Whole genome phylogenetic analysis.						
Unit:4	16s rRNA based metagenome profiling		6 hours			
16S rRNA microbiome – study design - Sample collection, extraction and library prep - 16S rRNA bioinformatics pipelines- Reads quality and processing - Normalization- - Hierarchical clustering- Taxonomic classification and profiling of bacterial communities - Downstream analysis in R - phyloseq, NMF, vegan, metagenomeSeq.						
Unit:5	Whole Metagenome profiling		6 hours			
Metagenome sequencing: Cloning the metagenome, Preprocessing of raw sequence data, Downstream sequence analysis – community analysis in R, Shotgun sequencing - Sequencing errors and Diversity estimates, Functional and Pathway annotation- MetaCyc, BioCyc and KEGG, Genomic approaches to study Human microbiome – CRISPR-CAS9/TN-seq.						
Unit:6	Contemporary Issues		2 hours			
Expert lectures, online seminars – webinars						
					Total Lecture hours	
					30 hours

Course code	JO4	WEB DESIGNING	L	T	P	C
Core/Elective/Supportive		Certificate course	4	-	-	4
Pre-requisite		Basic knowledge in Computers	Syllabus Version		2021-22	
Course Objectives:						
The main objectives of this course are to:						
<ol style="list-style-type: none"> 1. Provide knowledge about the web technologies 2. Understand the working of various web development softwares 3. Gain experience in the web designing 						
Unit:1	Introduction to Web Technologies					5 hours
Careers in Web Technologies and Job Roles - How the Website Works? - Client and Server Scripting – Languages - Domains and Hosting - Responsive Web Designing - Types of Websites (Static and Dynamic - Websites) - Introduction to HTML - Tags - Structure - Create and View an HTML document - Editing HTML - Elements - Comments - Alignment - Color and Size - Headings and Paragraphs - Text Formatting - Lists - Hyperlinks - Images – Tables.						
Unit:2	Dreamweaver					5 hours
Introduction to Dreamweaver - Tutorials - Dreamweaver Basics - Preparing to Build Dynamic Sites - Working with Page Code - Designing the Page Layout - Adding Content - Working with Behaviors and Animations - Working with Multiple Pages - Making Pages Dynamic - Developing Applications Rapidly – Appendixes – Help.						
Unit:3	Photoshop					6 hours
Introduction to Photoshop- An Overview of Adobe Photoshop - What's New in Photoshop - Looking at the Work Area - Getting Images into Photoshop and ImageReady - Working with Color - Producing Consistent Color (Photoshop) - Making Color and Tonal Adjustments - Selecting - Transforming and Retouching - Drawing - Painting - Using Channels and Masks - Using Layers - Applying Filters for Special Effects - Using Type - Designing Web Pages - Creating Rollovers and Animations (ImageReady) - Preparing Graphics for the Web - Saving and Exporting Images - Printing (Photoshop) - Automating Tasks - Macintosh Shortcuts - Windows Shortcuts – Help.						
Unit:4	Cascading Style Sheets					6 hours
Introduction to Cascading Style Sheets - Types of CSS - CSS Selectors - CSS Properties - Type Properties - Background Properties - Realtime Implementation - CSS Menu Design (Horizontal, Vertical) - Form Designing. Flash : Introduction to flash - Animation - Getting started overview - System requirements for Flash authoring - System requirements for the Flash Player - Installing Flash - Components - Properties Layers - timeline - Tools - Scene - Size - Framerate – Background.						
Unit:5	SwiSHmax					6 hours
Introduction - What's New in SwiSHmax - Getting Started - Sample SWiSH Movies - Fundamentals - Movies - Templates - Scenes - Timeline and Frames. Web Hosting: Web Hosting Basics - Types of Hosting Packages - Registering domains - Defining Name Servers - Using Control Panel - Creating Emails in Cpanel - Using FTP Client - Maintaining a Website.						
Unit:6	Contemporary Issues					2 hours
Expert lectures, online seminars – webinars						
Total Lecture hours					30 hours

VALUE-ADDED COURSE

S.No	Course code	Title of the Course	Total Hours	Credits
1.	VA1	Communication Skills Enhancement	15	2
2.	VA2	Soft Skills Development	15	2
3.	VA3	Journal Seminar and Aptitude Skills	15	2
4.	VA4	Project Proposal Writing Skills	15	2

Value Added Course

Title of the course:

COMMUNICATION SKILLS ENHANCEMENT

Course Code: VA1

No. of Credits: 2

Total hours: 15

Objectives of the course:

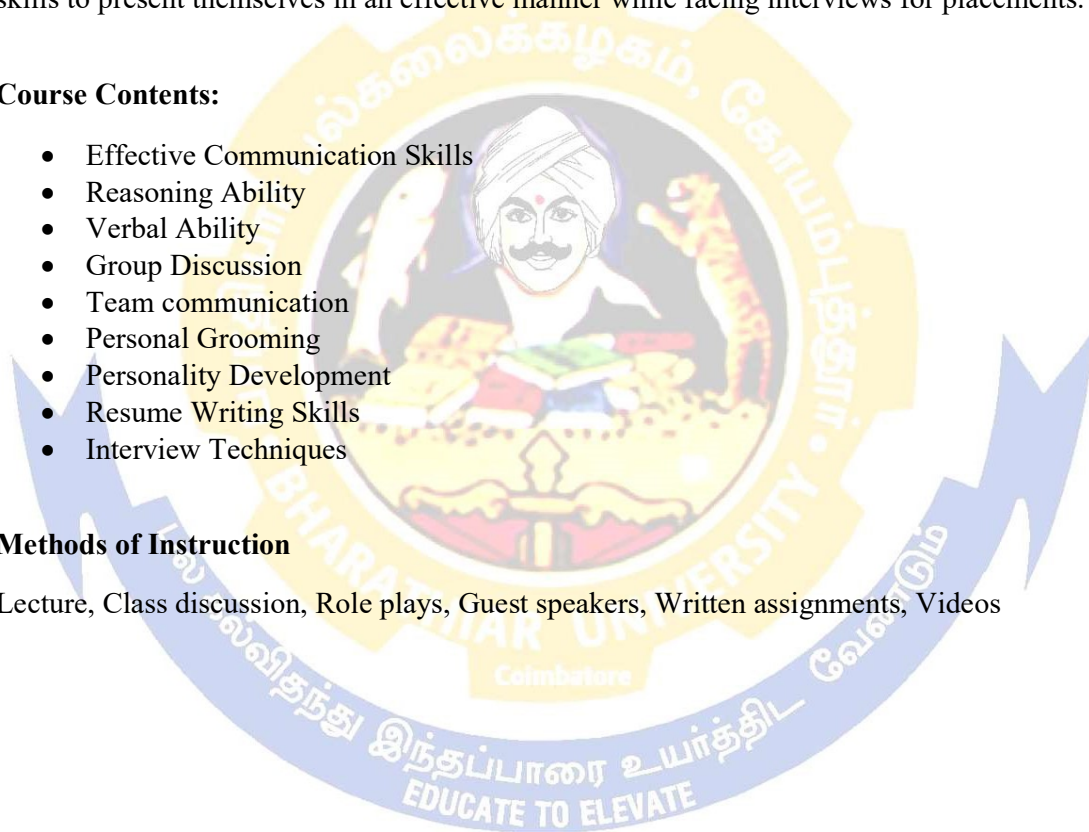

This course is designed to aid candidates in their preparation for recruitment and will enable students to be a better professional through effective communication. Students will learn skills to present themselves in an effective manner while facing interviews for placements.

Course Contents:

- Effective Communication Skills
- Reasoning Ability
- Verbal Ability
- Group Discussion
- Team communication
- Personal Grooming
- Personality Development
- Resume Writing Skills
- Interview Techniques

Methods of Instruction

Lecture, Class discussion, Role plays, Guest speakers, Written assignments, Videos

Title of the course:

SOFT SKILLS DEVELOPMENT

Course Code: VA2

No. of Credits: 2

Total hours: 15

Objectives of the course:

This course is designed to develop a wide variety of soft skills starting from communication, to developing emotional sensitivity, learning creative and critical decision making, developing awareness of how to work with and negotiate with people and to resolve stress and conflict in ourselves and others.

Course Contents:

- Public Speaking and Extempore speaking
- Assertiveness and self confidence
- Intepersonal Skills
- Basic Book keeping skills
- Leaderstip and influence
- Writing skills
- Developing key traits - Creativity, critical thinking and problem solving

Methods of Instruction

Lecture, Class discussion, Role plays, Guest speakers, Written assignments, Videos

Title of the course:

JOURNAL SEMINAR AND APTITUDE SKILLS

Course Code: VA2

No. of Credits: 2

Total hours: 15

Objectives of the course:

This course is designed to encourage the students to use various teaching aids such as over head projectors, power point presentation and demonstrative models. Students will learn skills in quantitative and verbal ability, data interpretation, logical reasoning and other abilities required while facing interviews as well as competitive exams.

Course Contents:

- **Seminar Presentation skills:** Preparing the Contents, Speaking Skills, Essentials for Dynamic Presentations and Speeches, Maintain confidence and handle nerves.
- **Verbal Ability:** English grammar, sentence completion, verbal analogies, word groups, critical reasoning and verbal deduction.
- **Numerical Ability:** Ratio and proportion, Permutation and Combination, Probability, Odd man out series, Time & work, Time-Speed & Distance, etc
- **Numerical reasoning and data interpretation:** Blood Relationships, Coding and Decoding, Cubes and Dices, Line graph, tables, Bar graph and Pie-chart.

Methods of Instruction

Lecture, Class discussion, Role plays, Guest speakers, Written assignments, Videos

Title of the course:

PROJECT PROPOSAL WRITING SKILLS

Course Code: VA4

No. of Credits: 2

Total hours: 15

Objectives of the course:

This course is designed to assist students in the completion of their research paper or final project. Students will acquire the skills and guidance in the final completion of the research paper/proposal and to prepare students for the oral defense. Students will be able to conduct academic research in the specific area of interest by collecting original data and analyzing the data to draw conclusions, reviews the literature on the topic, and the depth of knowledge in that discipline is enhanced and academic skills in writing and research are refined.

Course Contents:

- Introduction to the Research Process and determining a plausible study;
- Identifying Appropriate Research Problems;
- Writing the problem statement and Hypotheses;
- Reviewing the Literature and working with databases;
- Introduction Section of a Proposal – components, format
- Writing in a technical manner - APA Style; Review of literature,
- Planning a Study: Decisions on design, validity and reliability.
- Methodology –methods of collecting qualitative data,
- Analyzing the data and Finalizing the Proposal.

Methods of Instruction

Lecture, Class discussion, Role plays, Guest speakers, Written assignments, Videos

Annexure

M. Sc. Bioinformatics

Syllabus
(With effect from 2021)

Program Code:

DEPARTMENT OF BIOINFORMATICS
Bharathiar University

(A State University, Accredited with “A“ Grade by NAAC and
13th Rank among Indian Universities by MHRD-NIRF)

Coimbatore 641 046, INDIA

BHARATHIAR UNIVERSITY: COIMBATORE 641046
DEPARTMENT OF BIOINFORMATICS

MISSION

Promote bioinformatics teaching, training and research in excellence
Contribute to biotech and pharma industrial development as per global standards
