

Program Educational Objectives (PEOs) The M.Sc. Nanoscience and Technology program describe accomplishments that graduates are expected to attain within five to seven years after graduation. **PEO1** Outshine in academics and research in different motifs of Nanoscience and Nanotechnology through post graduate education. **PEO2** Solid foundation in their respective core subjects such as physics, chemistry and biology in addition to nanoscience and technology. **PEO3** In-depth knowledge in synthesis and characterization of novel nanomaterials with multiple applications. PEO4 Good theoretical and practical knowledge so as to comprehend, analyze, design, and create products and solutions for the real life problems. PEO5 Professional and ethical attitude, effective communication skills, teamwork skills, multidisciplinary approach, and an ability to relate nanotechnology to address energy, environmental and biomedical applications. PEO6 Academic environment aware of excellence, leadership, written ethical codes and guidelines, and the life-long learning needed for a successful professional career. Interact with their peers in other disciplines in industry and society and **PEO7** contribute to the economic growth of the country.

Program	Specific Outcomes (PSOs)
	e successful completion of M. Sc. Nanoscience and Technology program, the are expected to
PSO1	Understand and apply principles of physics, chemistry and engineering for understanding the scientific phenomenon in nano domain.
PSO2	Understand and apply mathematical techniques for describing and deeper understanding of nano systems.
PSO3	Understand and apply quantum mechanical methods for particles in various physical systems and processes.
PSO4	Understand and apply inter-disciplinary concepts and computational simulation for understanding and describing the natural phenomenon.
PSO5	Understand and apply principles of quantum mechanics for understanding the nano systems in quantum realm.
PSO6	Provide exposure in various specialization of Nanotechnology.
PSO7	Provide exposure to advanced experimental/theoretical methods for measurement, observation, and fundamental understanding of phenomenon at nanoscale and nanosystems.
PSO8	Engage in research and life-long learning to adapt to changing environment.
PSO9	Having adaptive thinking and adaptability in relation to environmental context and sustainable development.
PSO10	Having a clear understanding of professional and ethical responsibility.

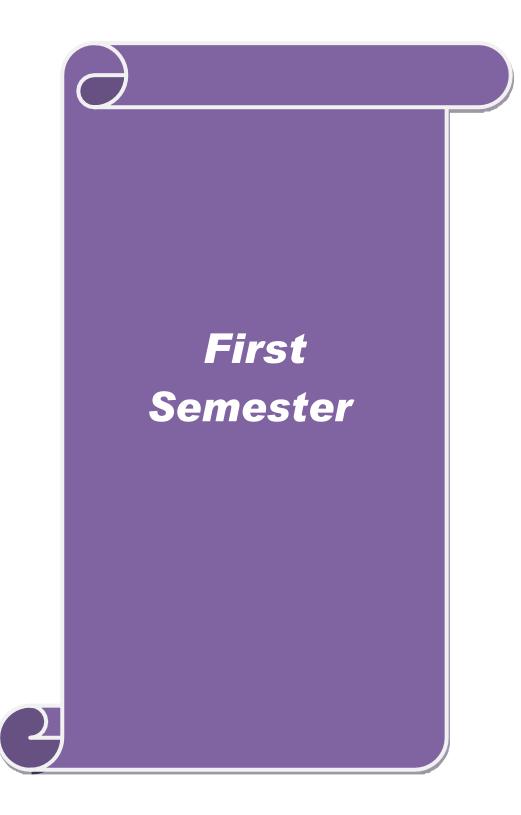

Program	Outcomes (POs)
On succe	essful completion of the M. Sc. Nanoscience and Technology program
PO1	Demonstrate knowledge on the physics/chemistry/biotechnology and basics of
	nanoscale science and technology for their multifunctional applications.
PO2	Demonstrate ability to synthesis and characterize the materials in general and
	also nanomaterials.
PO3	Project their skill in lithography and nanofabrication.
PO4	Having expertise in processing of nanomaterials, MEMS and bio MEMS as per
	needs and specifications.
PO5	Demonstrate an ability to visualize and work on laboratory and multidisciplinary
	tasks including material science, physics, chemistry and nanobiotechnology.
PO6	Demonstrate skills to use synthesis, processing and imaging equipments to
	analyze samples.
PO7	Able to propagate their knowledge to address problems of social relevance such
	as energy, environment and medicine through their specific electives.
PO8	Understanding the impact of nanomaterials on the society including
	environment, health and ecosystem.
PO9	Able to plan and execute their own innovative ideas in the form of projects,
	product design and development.
PO10	Develop confidence for self-education and ability for life-long learning.

Core Interface of the Trith Core 0 0 8 8 Pre-requisite Basic knowledge and understanding in physics, and technology Syllabus Version 2020 -2021 Course Objectives: 1. To offer students an opportunity to demonstrate their competence in laboratory work. 2020 -2021 2. To provide a vehicle for integrating the knowledge gained in various subjects of the degree course. 3. To allow the exercise of the undergraduates' personal qualities - <i>viz</i> , maturity, initiative and creative ability. 4. To apply communication skills, both oral and written, to communicate results, concepts and ideas. 5. 5. To solve problems of a non-routine nature. K4 2 In depth skill to use some laboratory / workshop equipment to process and characterize materials K2 3 Ability to analyze data to produce useful information and to draw conclusions by systematic deduction K3 4 Ability to work and study independently 5 Fevaluate; K6- Create 1 Ability to work and study independently 1 3 Ability to work and study independently 1 4 Ability to work and study independently 1 5 A	Course co	de 47V	PROJECT AND VIVA VOCE	L	Т	Р	C
Pre-requisite chemistry and biology in addition to nanoscience and technology Symbol Version 2020 Course Objectives:	0	ore		0	0	8	8
1. To offer students an opportunity to demonstrate their competence in laboratory work. 2. To provide a vehicle for integrating the knowledge gained in various subjects of the degree course. 3. To allow the exercise of the undergraduates' personal qualities - <i>viz</i> , maturity, initiative and creative ability. 4. To apply communication skills, both oral and written, to communicate results, concepts and ideas. 5. To solve problems of a non-routine nature. Expected Course Outcomes: On the successful completion of the course, student will be able to: 1 Ability to plan and implement an investigative or developmental project given general objectives and guidelines K4 2 In-depth skill to use some laboratory / workshop equipment to process and characterize materials K3 3 Ability to analyze data to produce useful information and to draw conclusions by systematic deduction K3 4 Ability to work and study independently K4 5 Apply the knowledge to design new research problems. K1- Remember; K2Understand; K3- Apply; K4- Analyze; K5- Evaluate; K6- Create Independently frequencies of final year projects is to provide students an opportunity to apply the knowledge they have learnt, their intellectual abilities and practical skills to solving real, or close to real life engineering problems. These problems may take the form of an investigation or the development of devices or both. <	Pre-requi	site	chemistry and biology in addition to nanoscience				
 To provide a vehicle for integrating the knowledge gained in various subjects of the degree course. To allow the exercise of the undergraduates' personal qualities - <i>viz.</i> maturity, initiative and creative ability. To apply communication skills, both oral and written, to communicate results, concepts and ideas. To solve problems of a non-routine nature. Expected Course Outcomes: On the successful completion of the course, student will be able to: Ability to plan and implement an investigative or developmental project given general objectives and guidelines Ability to plan and implement an investigative or developmental project given general objectives and guidelines Ability to analyze data to produce useful information and to draw conclusions by systematic deduction Ability to work and study independently Apply the knowledge to design new research problems. KI- Remember; K2-Understand; K3- Apply; K4- Analyze; K5- Evaluate; K6- Create About the Project The purpose of final year projects is to provide students an opportunity to apply the knowledge they have learnt, their intellectual abilities and practical skills to solving real, or close to real life engineering problems. These problems may take the form of an investigation or the development of devices or both. Throughout the project, students are expected, with guidance from their supervisors, to do things and obtain information for themselves. Literature review, which provides the students are broader perspective of the work hey are engaged in, is an essential part of the project. The projects are also organized with a view to develop their ability to communicate, both verbally and in writing. The verbal skill is developed through propert miting. These reports form the major part of the final assessment. Throughout the project such were necessary, how to use instruments, data analysi	Course O	jectives:					
course. 3. To allow the exercise of the undergraduates' personal qualities - viz. maturity, initiative and creative ability. 4. To apply communication skills, both oral and written, to communicate results, concepts and ideas. 5. To solve problems of a non-routine nature. Expected Course Outcomes: On the successful completion of the course, student will be able to: 1 Ability to plan and implement an investigative or developmental project given general objectives and guidelines K4 2 In-depth skill to use some laboratory / workshop equipment to process and characterize materials K2 3 Ability to analyze data to produce useful information and to draw conclusions by systematic deduction K3 4 Ability to work and study independently K4 5 Apply the knowledge to design new research problems. K1- Remember; K2-Understand; K3- Apply; K4- Analyze; K5- Evaluate; K6- Create About the Project The purpose of final year projects is to provide students an opportunity to apply the knowledge they have learnt, their intellectual abilities and practical skills to solving real, or close to real life engineering problems. These problems may take the form of an investigation or the development of devices or both. 1 Throughout the project, students are expected, with guidance from their supervisors, to do things and obtain information for themselves. Literature review, which	1. To of	fer students	an opportunity to demonstrate their competence in laborat	ory w	ork.		
 To allow the exercise of the undergraduates' personal qualities - viz, maturity, initiative and creative ability. ORGANIC SOLAR CELLS: MATERIALS DESIGN AND DEVICE					
CHARACTERIZATION Name of the Department Nanoscience and Technology					
-	Dr. P. Sakthivel				
Name of the Faculty Member i/c	Professor				
With Complete Address with Phone	Department of Nanoscience and Tec	hnology			
and e-mail	Bharathiar University, 0422-428428, 9677560890				
Inter / Intra Department Course	Inter Department Course				
Duration of the Course	40 hours				
Eligibility	Chemistry, physics, Electronics, Nar Technology	oscience and			
Number of Candidates to be Admitted	20				
Registration Procedure					
Job Opportunities: Solar cell Companies					
The objectives of the Course are:					
The main objectives of this course are to:					
1 Differentiate between small molecules a					
2 Design conjugated small molecules and	macromolecules				
3 Tune the HOMO, LUMO and band gap	energy levels by theoretically				
4 Identification of suitable donor and acce	eptors for BHJ device fabrications				
5 Solar energy harvesting devices fabricat	tion				
Course Content Lecture					
Module 1 Introduction and overview of utilization	of alternative energy sources and	3 hours			
Module 2Principles of energy conver second laws, the Carnot cyc	sion: thermodynamic first and	3 hours			
	y and spectrum, global solar	3 hours			
	Nonrenewable energy resources	3 hours			
	es of Organic Solar cells materials	4 hours			
Module 6Working principles of BHJand Fullerene ACCEPTOR	Devices with D-A Type DONOR S	4 hours			
Module 7 Designing DSSCs and conju- materials and energy levels	ugated Small/polymer solar cell	5 hours			
Module 8 Fullerene Acceptors Synthe	esis and Structural Studies	5 hours			
Module 9 Overview of perovskite sola		5 hours			
Module 10Organic solar cells device faApplications	abrication techniques and	5 hours

1	Name of the Course	Solar Panel Installation Technician			
2	Name of the Department	Nanoscience and technology			
	Name of the Faculty Member	Dr. C. Viswanathan Associate Professor			
3	Member				
		Department of Nanoscience and Technology			
4	Inter/Intre Department	Bharathiar University			
4	Inter/Intra Department Objectives of the Course	Inter Department The prime objective of the course is to produce			
5	objectives of the course	highly skilled and technically qualified professional solar panel installers and also to guide them in career opportunities in solar power industry.			
6	Topics to be Coveredi.Understand the basics of electricity and solar energyii.Understand the site and equipment related requirements for solar PV installationiii.Design a solar PV system as per customer's requirements as well as appropriate codes and standardsiv.Install a solar PV system based on the relevant designsv.Maintain a solar PV system and identify and troubleshoot problemsvi.Ensure safety while installation and operation vii.vii.Undertake project management for installation				
7	Duration of the Course	1 year			
8	Eligibility	B.Sc, in Physics or Electronics			
9	Registration				
10	Description of the Course	 Developing the knowledge basis of the trainee by covering various aspects of solar PV feasibility studies, basics of design, installation, operation and maintenance of solar panels Providing updated teaching materials Covering the technical and other capacity requirements for the solar industry Providing hands-on training in fabrication, design and installation of solar panels Exploring the local and global sectors from the experts 			
11	Job Opportunities	Solar panel Installation Technician at various electronic sector			
12	Number of Candidates	15 No's per year			
13	Course Fee

 Marie Curie Early Stage Researcher –Ph.D., Studentship Toxicity testing Laboratories in CSIR-Central Leather Research Institute (CLRI), CSIR-Central Drug Research Institute (CDRI) and Universities. Job Opportunities in Pharmaceutical companies. The objectives of the Course are: The main objectives of this course are to: 1 To learn the basic importance and regulations of Nanotoxicology in nanotechnology fields. 2 To understand toxicity produced by nanostructures and methods to reduce their toxicity. 3 To provide knowledge on social impact of nanoindustry.					
4 To desig	gn and conduct experiments, a	s well as to analyze the results.			
5 To unde	erstand the socio-ethical respon	nsibility			
Course Cont	ent	ical / Project / Internship			
Module 1Introduction – Definition of terms-Toxicity-Hazards and hazard types and assessment of risk.6 hours					
Module 2Concept of Nanotoxicology - Laboratory rodent studies - Ecotoxicologic studies - Methodology for Nanotoxicology - in vitro and in vivo toxicity testing6 hours					
Module 3	Mechanism of nanosize pa species meditated NSP Nanoparticles and Living Health Effects	article toxicity - Reactive oxygen toxicity - Interactions between g Organisms: Mechanisms and	6 hours		
Module 4	Interactions of Nanopartic	les with Cells and their Cellular	6 hours		

	Nanotoxicology - Cytotoxicity of Ultrafine Particles - Cytotoxicity and Potential Mechanism of Nanomaterials- Immunotoxicity					
Module 5	Nanopollution – Nanomaterials in Environment - Toxicology of Airborne - Manufactured nanomaterials in the environment- Physicochemical characteristics of nanomaterials.	6 hours				
Module 6	Biological Activities of Nanoparticles - nanoparticles interaction with biological membrane-Entry routes into the human body- Disposition of NSPs in the respiratory	6 hours				
Module 7	Portals of entry and target tissue – Risk assessment – Ethical – Legal and Social Implications	6 hours				
Module 8	Nanoparticle Toxicology and Ecotoxicology, The Role of Oxidative Stress – Development of Test Protocols for Nanomaterials – Regulation of Engineered Nanomaterials.	6 hours				
Module 9	NanotechnologicalRisks–UnderstandingofNanotechnology'sSocialImpacts-Nanotechnology in theMedia.EducatingUndergraduateNanotechnologyOpportunities–HumanResourcesNanotechnology–HumanResources	6 hours				
Module 10	Ethical Issues in Nanoscience and Nanotechnology – Ethics & Law in a New Frontier- An Exploration of Patent Matters Associated with Nanotechnology	6 hours

Course code		L	Т	Р	С			
Core		REGENERATIVE MEDICINE		0	0	4		
Core		This course is unique and innovative provides	4 0		U	4		
Pre-requisite		exposure to the students in the recent advances in medical science. The students are expected to have strong knowledge in material science and knowledge in biological systems.			2020 -2021			
Course Object	ives:							
basic biolo	ogy of st le course	p provide an in-depth knowledge of the field of regenerat em cells to therapeutic applications. e aimed to provide the translational knowledge of medic						
Expected Cou	rse Outo	comes:						
After the com	pletion c	of the course, the student will have the following capability	ties:					
1 Describe	regenera	tive medicine and their specific characteristics.			K	Х		
2 Describe tissue eng		of applications to replace damaged or destroyed cells in g.	cludin	g	K	X		
3 Account	for reger	nerative medicine applications to human diseases.			K	Х		
4 Account	for and e	valuate current theories, methods and techniques within	the		K	X		
		ir practical execution and application.						
orally and	l in writi					X		
K1 - Rememb	er; K2 -	Understand; K3 - Apply; K4 - Analyze; K5 - Evaluate; 1	K6 - (Create)			
Unit:1Basics of Regenerative Medicine12 ho								
		ne: Introduction- Bioreactors-Key Features-Controlled g tissues-Bioreactor based products.	cultu					
Unit:2		Nanomaterials for Regenerative medicine			hou			
		anocomposites for Regenerative medicine: Perspect						
regenerative m		ite 3D scaffolds-Drug free organ replacement-Carbon	basec					
Unit:3		Surface Modification for Cell Interaction			hou			
	•	cal modified biomaterials for cell adhesion: Gene						
	-	the nanostructured surface-Self assembled monola ctive hydrogels: Introduction-Methods of preparation	•		-	•		
	, 0		JII-CII	ennce	u a	liu		
Physical reticulation process-Properties-Major issues on injectable process.Unit:4Cellular Therapeutics12 hours								
Introduction to stem cells-Molecular and cellular bases of tissue and organ development-								
Therapeutic uses of stem cells-Molecular bases of dieases-Bio-Artificial organs.								
Unit:5 Tissue Therapy 12 ho					hou	rs		
Engineering of small and large diameter blood vessels-Cardiac tissue-Intracorporeal kidney								
support-Genito urinary system-Reproductive system-Tissue therapy implications of regenerative medicine-Current issues and challenges.								
Unit:6		Contemporary Issues		2	hou	rs		
Current challen domain.	ges and	regulatory issues will be addressed by the experts in the	respec	tive

BHARATHIAR UNIVERSITY:: COIMBATORE 641046 DEPARTMENT OF NANOSCIENCE AND TECHNOLOGY M.Sc., NANOSCIENCE AND TECHNOLOGY (For the candidates admitted from the academic year 2022-23 onwards) Overview, Curriculum and Syllabus

Duration: 2 Years

Level: Post-Graduation

Type: PG. Degree

Eligibility: Any undergraduate Science Degree recognized by UGC

VISION: To achieve excellence in the field of Nanoscience and Technology through academic and research programs and to participate in the interdisciplinary programs offered in the University.

MISSION: As a Department, We are committed to,

- Provide knowledge and skill in Nanoscience and Technology through post-graduate and doctoral programs.
- Undertake research in emerging areas of physical, chemical and biological sciences with Nanoscience and Technology and transform the findings for the benefit of the society.
- Solve the environmental issues through the post graduate and research programs.
- Provide required knowledge in physical, chemical and biological sciences to understand Nanoscience and Technology for research.

Career Opportunities: M.Sc. Nanoscience and Technology graduates have plethora job opportunities in the following fields;

- Research Scientist and formulation scientist
- Nanomaterial Product developer
- Government agencies for regulatory monitoring
- Patent examiner
- ➢ Entrepreneurship
- Consultancy organizations in pharmaceuticals, Energy, Material Science, Medical, Agriculture, Environment Protection.
- > Job in Scientific Research Organizations.
- > Enroll for higher degree through research in India or abroad
- ➢ Healthcare industry
- > Teachers Recruitment Board (TRB) Tamil Nadu for Arts and Science Colleges.
